EXTRACT

From an Act prescribing Rules for the Government of the State Library, passed March 8th, 1861.

Section 11. The Librarian shall cause to be kept a register of all books issued and returned; and all books taken by the members of the Legislature, or its officers, shall be returned at the close of the session. If any person injure or fail to return any book taken from the Library, he shall forfeit and pay to the Librarian, for the benefit of the Library, three times the value thereof: and before the Controller shall issue his warrant in favor of any member or officer of the Legislature, or of this State, for his per diem, allowance, or salary, he shall be satisfied that such member or officer has returned all books taken out of the Library by him, and has settled all accounts for injuring such books or otherwise.

Sec. 15. Books may be taken from the Library by the members of the Legislature and its officers during the session of the same, and at any time by the Governor and the officers of the Executive Department of this State who are required to keep their offices at the seat of government, the Justices of the Supreme Court, the Attorney-General, and the Trustees of the Library.

O. M. CLAYES, STATE PRINTER.

INV. 1894

Mining and Scientific Press.

A Mining Journal--Devoted to News, Art, Science and Progress.

VOLUME VIII. SAN FRANCISCO, SATURDAY, JANUARY 2, 1864. NUMBER 1.

Description of a Mammoth Thigh Bone found Near Carson City, Nevada Territory.

BY THOS. M. LOGAN, M. D., OF SACRAMENTO.

In the number for August 30th, 1863, of the *Mining and Scientific Press*, I published an account explanatory of an engraving of a fossil molar-tooth of the Mastodon Giganteum, of Cuvier, found some twenty feet below the surface, on Indian Creek, one of the tributaries of the Cosumnes River, near Drytown, Amador county. The accompanying engraving, one-fourth in size, is taken from a photograph of the upper fragment of a femur of the same pachyderm. The specimen was found on the bank of Carson River, in a south-east direction from Carson City, N. T., some 5000 feet above sea level, embedded in a dark colored, chiefly porphyritic, detritus, the broken appearance of which would indicate a long drift and the violent action of water. It appears to be a portion of the head and neck of the left thigh bone, and is in a remarkable state of preservation:—the metamorphic changes having been so exact, atom for atom, that the cancellated, bony structure, which is perfectly preserved, gives the idea that the specimen is of a far more recent date than that of the newer Pleiocene, assigned to it by geologists.

THIGH BONE OF A MASTODON—5 3 4 inches in diameter.

The following measurements give the dimensions and proportions: Circumference at junction of condyloid epiphysis with neck, 17 inches; Transverse curvilinear of articulating surface, 10 inches; longest diameter of the hemisphere, 5¾ inches; diameter of neck, 4¼ inches; length of specimen, 8 inches.

The animals of this proboscidian tribe, which constitute a distinct genus, have been quite destroyed (no species of it being now alive) "by those changes of circumstances in the organic and inorganic world, which," according to Sir Charles Lyell, from whom we here quote, "are always in progress, and are capable, in the course of time, of greatly modifying the physical geography, climate and all other conditions on which the continuance upon the earth of any living being must depend."

The name is a compound of two Greek words, signifying mamillary teeth, referring to the principal character of the Mastodon as distinct from its elephantine cotemporary. They had the feet, tusks, trunk and many other details of conformation the same as the elephants; but their grinding teeth differed in having large, conical tubercles above the gum, which, by dentrition, were reduced to disks of various size, that represent sections of the tubercles: a conformation common to the Mastodon, Hippotamus, Hog, &c, and which has induced the erroneous idea that the first were carniverous. The great Mastodon probably haunted marshy places, feeding upon the roots of the vegetables common to such sites.

The remains of seven species have been discovered—three in Europe, two in South America, one in India and one in North America; and the further discovery of these fossils on the Pacific is interesting as showing the geographical range of the Mastodon to have been co-extensive with the continent, and not limited, as some have supposed, to the eastern slope of the Rocky Mountains.

So little was known up to the year 1712 of this colossal creature, that Dr. Mather described some of its bones, found at Albany on the Hudson river, as those of giants, and regarded the discovery as confirming the sacred record, "There were giants on the earth in those days." Afterwards similar remains were found abundantly along the course of the Ohio river, and the "Animal of the Ohio" became the name of the great unknown, until Cuvier originated its scientific denomination. Myriads of its bones occur along the rivers of the Osages, and indeed are commonly met with all over North America between the parallels of 33° and 34° N. latitude, from the northern Atlantic coast to the Rocky Mountains. Within these two limits the principal locality is the Big Bone Lick, Kentucky—one of those marshy valleys containing brackish water, locally termed "licks," on account of deer and other animals resorting to them. It is estimated that the bones of one hundred Mastodons, two hundred elephants, twenty buffaloes, two oxen and two deer have been carried from this marsh.

An almost perfect skeleton, armed with gigantic tusks, but made up, however, of the bones of different individuals, is in the Peale Museum, at Philadelphia, measuring eight feet in height and fifteen feet in length.

MINING REVIEW FOR 1863.

It has been truly said that California has astonished the world, and almost revolutionized commerce by the produce of her mines of the precious metals. The enormous production of the mines of the Pacific Coast, for the last fourteen years, has indeed been the marvel of the age. From 1849 to 1862 the sum of $750,000,000 in coin and bullion was shipped from the United States to foreign countries—chiefly to England, nearly all of which has been the product of this coast. Great as has been the reality of the past, the promise of the future is still more abundant.

During no one year since the first discovery of golden sands upon the banks of the American River, have our adventurous miners made such extensive and important developements as during that which has just drawn to a close. The amount of capital set in motion for mining purposes during the past year is without a parallel in the history of such enterprise, and the results which have attended this remarkable movement are almost beyond comprehension. It is only about four years since the discovery of silver in Washoe was first announced. For months thereafter, the believers in the value of the discovery were few beyond those who were personally cognizant thereof. At that time scarcely a business man or capitalist in San Francisco could be induced to take any kind of a venture in mining. The mines thus far had been developed by the persevering industry of our hardy miners, aided, so far as they were aided at all, almost exclusively by Eastern or foreign capital. Gradually the great truth has been brought home to San Francisco capitalists that there was money to be made by mining enterprise, and that if they would see this city grow and flourish, they must lend a hand to the development of our mineral wealth. By good fortune, the early investments in Washoe were productive of immense returns. An outlay of less than three millions of dollars upon the Comstock ledge has in three years created a property valuation of not less than thirty millions, besides returning in dividends a sum larger than the original outlay. It is no marvel that such unexampled success should create so great a furor in the public mind as to lead to many extravagancies, and to open the door for a large amount of illegitimate speculation. Whatever of an unfavorable nature has been the result of this *mania* upon the present industry and prosperity of our State, there can be no question but that the prospective benefits, both to our own State and the world at large, is important and advantageous in the highest degree.

EXTENT OF OUR MINERAL DEVELOPMENTS.

Previous to the commencement of the present year, outside of Virginia City and its immediate vicinity, we knew but little of the mineral value of the vast region between the Sierra Nevada and Rocky Mountains, beyond vague rumors gathered from the reports of a few daring adventurers who had pushed their explorations towards the interior of that Territory. Stimulated by these reports, however, dur-

ing the past year many thousands have gone out into those inhospitable regions, with pick and shovel and opened up to the mining world, according to well authenticated accounts, riches more wonderful than any which had previously been developed.

The hardy prospectors of California have rolled on over rugged hills and barren plains, unmindful of every species of danger which can beset the pioneer, prying into every nook in the mountains and delving deep into the hill sides, until they have connected their explorations with those of the British provinces on the north, and with Mexico on the south, while they have traveled eastward until they have met their brethren from the Mississippi valley, in the distant Rocky Mountain cañons, and along the head-waters of the Colorado at Pike's Peak.

From the little flat upon the forks of the American River, where Marshall picked up the first piece of California gold, American enterprise has gone on step by step, enlarging the boundaries of our mineral field, until we now behold it embracing a large portion of the Territories of Dakotah, Nebraska and Colorado, all of New Mexico, Arizonia, Utah, Nevada, California, Oregon and Washington Territory. These localities embrace a scope of country about 1,200 miles square, or an aggregate of nearly a million and a quarter of square miles. Besides the wealth in gold and silver, no other part of the world contains such immense, and so numerous or so rich mines of copper, quicksilver and iron, and we doubt not that it will yet be found fully equal to any other portion of the earth in the yield of coal.

The progressive development of this vast mineral region must soon build up an empire upon the Pacific, more vast, more wealthy and more powerful than any which the world has yet seen, and bound, as this empire will be to the Atlantic with a net work of iron rails and telegraphic wires, and situated as it is directly in the great highway between Europe and the teeming millions of Asia, who can form any adequate conception of the commercial importance which must soon be added to its mineral value!

LEGITIMATE MINING—STOCK OPERATIONS.

The *placers* of California, like all other placers where the precious metals are energetically sought after, are fast becoming exhausted; but legitimate mining, the business of searching for and developing ore-veins, has become the chief occupation of our people. In the prosecution of this business, labor, skill and capital are required. Heavy expenses are necessarily incurred in preliminary operations, and expensive machinery is needed for the reduction of the ore. Mining operations of this class cannot be carried on by individual enterprise as in the *placers*. Hence it is that we witness the present movement of capital, aggregating into joint stock operations. The number of these incorporations organized in California and Nevada Territory during the past year cannot be less than 4,000. Of course the capital which they represent, is as yet merely nominal. But enough has already been developed to give positive earnest of a most glorious harvest of the precious metals, so soon as our miners shall have tired of prospecting and turned their attention to a proper development of the ground already acquired.

The weekly receipts of bullion from the mines upon the Eastern Slope, is already reckoned by the *ton*, while the future of this yield is looming up into grand yearly totals which almost stagger our belief. That many and grevious losses will occur is a matter to be expected—one which never fails to accompany untried and experimental branches of business everywhere. Wild and reckless speculation is always attendant upon seasons of especial thrift in any department of business. Its very existence affords the best evidence that the basis upon which it operates is substantial and legitimate. The money expended in purchasing and opening the mines, in building mills, roads, etc., of course, has not yet come back to us in the shape of dividends; but it has created values far exceeding the original outlays. Upon the Comstock ledge alone, as we have already said, an outlay not to exceed $3,000,000, has created a value of not less than $30,000,000 in the mine alone, to say nothing of the additional millions it has created in the building up of Virginia City, Gold Hill, etc. Aside from this remarkable vein, there has evidently been a large gain in the aggregate, in the vast amount of bullion which has found its way to this city from "outside mines," and in the values created by the numerous towns and cities which have sprung up all through those vast mining regions—the legitimate and direct result of the investment of our capitalists in those mines.

PROPORTIONATE YIELD OF THE MINES—TREASURE SHIPMENTS.

Considering the vast values which we have been creating, during the past year, it is not necessary that we should show an increased shipment of treasure during that period, to prove that our miners have enjoyed a year of unusual prosperity. Yet the figures are largely in its favor. Compared with last year they stand as follows:—

Total shipments of Treasure for 1863	$45,724,436
Total shipments of Treasure for 1862	42,380,809
Excess for 1863	$3,343,627

That the creation of a large portion of the values on the Eastern Slope, during the past year, has been at the expense of our treasure shipments, must be evident to every person who will take into account the immense drain upon the gold producing labor which has been a necessary attendant upon the silver and copper developments during that period.

Never since the day on which California first unfolded her golden treasures, has she experienced such a general movement of her population from established centers of industry, to new and distant fields of labor, as has been witnessed during the past year. Every branch of her diversified industrial pursuits has been to a greater or less extent affected by the silver mania which seems to have reached its culminating point during the year. Probably not less than 20,000 miners, to say nothing of other classes, have crossed the Sierra Nevada, during the past year, in search of their fortunes among the silver mines of the Eastern Slope. Of course, such a general stampede, although it has resulted in vast additions to the prospective wealth of the community, has nevertheless operated most disastrously upon numerous local interests. Many of our interior towns have sadly retrograded during the period under review; their placer and quartz veins having been temporarily abandoned in the search for "feet" in other and distant regions. Such a general withdrawal of labor could not but affect disastrously the yield of the precious metals in many old localities, altho' happily that decrease has been more than made good by the increased yield of others. "This very restlessness," says a contemporary, in speaking of this remarkable movement, "which incites us to explore the mountains and deserts in search of new sources of wealth, has not been without its beneficial results. It has opened up to settlement and civilization regions of country that, under other circumstances, would have remained for many generations in their original condition. * * * It will eventually be the means of filling up whatever portion of the intervening range of country is available for the purposes of human life, with an industrious and enterprising population. Indeed it would seem as if Providence had lured us on in this way for the purpose of redeeming the wilderness. Although there may be much loss and suffering before we pass through the ordeal of the present excitement, the ultimate results will be greatly to our advantage."

THE COPPER MINING INTEREST.

The progress and development of the copper mining interest, during the past year, forms a most important and encouraging feature in our industrial pursuits. At the opening of the year, but little attention had been paid to this branch of mining, outside of a small section of country embracing a limited portion of Calaveras and Amador counties. The success and fame of the mines at Copperopolis began toward the close of 1862, to attract the attention of miners from various sections of the State. Many who visited those mines and examined the indications of the veins and the characteristics of the ore, became, at once, satisfied that they had seen the same indications and similar ore in other localities, but without any knowledge of their value at the time. The result was the development of several copper mines in various parts of the State—chief, perhaps, among the mines thus brought to notice, we may mention the "Well Lead," near the Empire Ranch, in Nevada county. The particulars of the discovery of the fact that the locators of this mine had long unwittingly been in possession of a valuable property, opened by them in sinking a *well* upon their premises, are too generally known to need a recapitulation in this connection. Commencing at the Keystone and Union mines in Copperopolis, the explorations of the past year have gradually traced out a distinct and well defined "copper belt," North and South, through the entire length of the State. This belt is from 8 to 15 miles in breadth, and passes along, embracing the entire extent of the foothills of the Sierra Nevada. Copper has also been found in the Coast Range in Del Norte county and in Mount Diablo.

Notwithstanding the large share of attention which has been attracted to this new field of mining, we apprehend that but a very imperfect idea of its actual present extent and importance is entertained even by well informed observers. Indeed, in the existing lack of statistical information, it is difficult for any one to obtain much information upon this point. In reviewing the progress of this interest for the past year, it is gratifying to observe that the flush of excitement which so generally pervaded the public mind a few months since, has of late given way to active and persistent labor in developing the mines and in bringing to the surface and shipping the most valuable portion of the ores. Work enough of this description has already been done, to establish, beyond doubt, a high value for quite a number of mines, and to afford reliable *data* for important calculations and estimates with regard to the future of this new branch of our mining industry.

Shipments of copper ore from this port since the first of January, 1863, must considerably exceed 5,000 tons, with an aggregate value of not far from three quarters of a million of dollars. The ore thus shipped, it should be borne in mind, is but a small part of that which has been raised to the surface. It is probably a safe calculation to value the copper ore now upon the surface at the various mines throughout the State, and in store in this city and at other places, at a million of dollars. The number of mines now shipping, or in a condition to ship may be set down at about twenty; in addition to which there are hundreds in progress of development, a large portion of which will, within another year, become valuable shipping mines.

CONNECTED. — San Francisco and Santa Clara were united in iron bonds on Tuesday last, by the completion of the San Jose Railroad to the latter point. Trains are to run regularly, and but a few days will elapse before San Jose will be the terminus.

NEW ALMADEN.—It is reported at San Jose that gold and silver ore has been found upon the claims of the North Uvas Quicksilver company, located near the New Almaden mine.

THE GOLD HILL NEWS comes to us much enlarged and improved. This daily is one of our most valued exchanges.

THE TERRITORIAL ENTERPRISE now publishes a weekly issue. The people of Virginia city and vicinity have long needed a publication of this kind.

PRACTICAL EDUCATION.

It is an idea, too generally prevalent, that after a boy has passed through a primary, or perhaps an academical course of education, and elected to follow some mechanical pursuit instead of a profession, he may, with impunity throw aside his text books, and consider his education completed. Nothing could be more erroneous. The object of primary intellectual education, properly considered, is simply to furnish a young man with tools and so train him in their use as to enable him to employ them for the extraction of knowledge from the ever shifting succession of the ordinary phenomena of life and nature, which are constantly passing before him. To send him out from the parental roof without these tools, is like turning him into the world naked and defenceless. A boy is taught to "read, write and cypher" in order that he may thereby have access to infinitely wider stores of knowledge, which by simple oral intercourse only, would be a sealed book to him The primary branches of education therefore are but intellectual tools; and it would be none the less foolish, for the miner to throw away the implements of his labor. and endeavor to follow his calling without them, than for a young man just from school, to consider his education finished, and resolve thereafter to spend his leisure hours in amusement, or in perusing the light and trifling literature (so called) which comprises so large a portion of most of our libraries, and to which so many of our most widely circulated periodicals are chiefly devoted.

Young men of the present day enjoy rare privileges over those which were attainable even in the most palmy days of Greece and Rome. Eighteen hundred years ago a Greek or Roman youth, if the son of a prominent citizen, was taught about the same things that are now taught in our common schools—though, by a system of oral instruction, much inferior to the system which the invention of printing has enabled us to employ at the present day. But after that young man left the academic *grove* (for the school house is also a modern institution) fully supplied with intellectual tools, these tools were comparatively useless to him for the lack of a field in which to employ them. The physical sciences which are open to the youth of the present, day, were then almost unknown. The battle field and the forum, were then the only attractions outside of the most common walks of life. It is to this fact—this lack of *mental employment* for the grown up masses of those days, that we are to attribute the marked difference between the civilization of the the early centuries of the christian era, and that of the nineteenth century.

Modern civilization rests mainly upon physical science. It is the prodigious development of the physical sciences within the last two centuries which has effected such a marked distinction between the intellectual habits and tone of thought of the present day and that of the earlier ages of Christianity. It is that which is so rapidly wrestling the rule of the world from the brute force of the few who imagined themselves "born to rule" and placing it in the intelligence and moral energy of the masses. "I believe" says a learned English writer, "that the greatest intellectual revolution mankind has yet seen is now slowly taking place by her agency, [the agency of physical science]. She is teaching the world that the ultimate court of appeal is observation and experiment, and not authority; she is teaching it to estimate the value of evidence; she is creating a firm and living faith in the existence of immutable moral and physical laws, perfect obedience to which is the highest possible aim of an intelligent being."

The merest schoolboy daily encounters difficulties which nothing but a knowledge of physical science can overcome. The young man, when he goes out into the world, meets them at every turn. How necessary then that our young men should be prepared for these emergencies. They cannot be so prepared to any extent either in the primary or high school. These merely furnish the tools with which they must work their way up the hill of science guided by the experience of others and their own good judgment. This acquisition of science by the people—the laboring classes, more particularly, is social progress. A knowledge of the laws of mechanics, (the best school for acquiring which is in the use of books, in connection with daily employment in the shop, and their application is calculated to make labor more valuable by making it more intelligent. Time was, and that but recently, when artizans and laborers looked upon the introduction of machinery as injurious to their interests. Education and an intelligent view of the productive forces of modern times, has effectually banished all such prejudices.

The *Press*, has been the great agent of modern times in elevating the working man to his proper standing and importance in the community. If properly conducted it might be of still more service to him, in affording that class of popular instruction which he so much needs. It will be the chief aim of this paper to afford such instruction.

"Wherever." says Mr. Whitworth, before the New York Industrial Exhibition, "Wherever education and an unrestricted press are allowed full scope to exercise their united influence, progress and improvement are the certain results, and among the many benefits which arise from their joint co-operation, may be ranked most prominently, the value which they teach men to place upon intelligent contrivance; and the readiness with which they cause new improvements to be received. The impulse which they unavoidably give to the inventive spirit is gradually emancipating man from the rude forms of labor, and making what were regarded as the luxuries of one age to be looked upon in the next as the ordinary and necessary conditions of human existence."

If the highest education of our Universities is essential to our national and social progress, the *lower* education of our middle classes and working men is more so. If in the one case, a finished education is necessary to give an intelligent comprehension of the progress of the human intellect, so, on the other hand, a practical education is needed to give precission and intelligence to the efforts of those whose success in the common avocations of life is dependent on the skillful adaptation of the general laws and properties of the material world.

LEGISLATIVE AID.

No stronger argument in favor of the establishment of a Mining School, or some organization of practical miners on the plan alluded to in another column, need be urged than the universally admitted fact that millions of dollars are annually allowed to escape from our quartz mills, into the gulches and creeks upon which they are located, and pass to waste in their sands. Thousands of dollars are appropriated every year by our Legislature, in aid of agricultural improvements; but, we believe, with the exception of one session, there has never been a dollar appropriated in aid of mining improvements, with the view of saving this immense waste; and yet the losses to the community, by lack of skill on the part of our gold quartz workers, or the want of improved machinery, has wrought a greater pecuniary damage to the State, in any one year, than the deficiency in such knowledge and machinery in agriculture has in the entire decade. This important fact should be borne in mind by our present Legislature. It should be made a matter of discussion in that body, and such consideration given to it as its importance demands. We do not wish to see one dollar of the customary appropriation withdrawn from the agricultural interest, but we would urge the necessity of more attention being devoted by our Legislators, to the great interest of mining, to which all other industrial pursuits in the State, are but of secondary importance, and upon the success of which all others mainly depend. We would call the especial attention of the mining members to this matter. In passing, we would remark, that notwithstanding this almost inexcusable lack of legislative encouragement, the miners of California have not been idle in the direction of mining improvements, but have added more to human knowledge in that direction, than all the world besides for the past century! California miners have ever been proverbial for their ingenuity and intelligence, and thousands, perhaps we might say millions, of dollars have been expended by them in experimental improvements. More has been expended from private purses, in that way, in California, within the last ten years, than has been expended in the entire Union besides, in agricultural experiments. We trust the present Legislature will do the mining interest justice in this and every other particular. We have faith that it will.

Taxing the Mines.

Editor Mining Press:—Your valuable journal, in the number for December 21st, contains an editorial on the subject of "taxing the mines" which agrees with the general opinion of our citizens, that such a proceeding would be both impolitic and impracticable.

There is however a mode by which the U. S. Government could derive a handsome income from the products of our mines, and which would be very acceptable and advantageous to the interests of our people. Although not new in political economy, we have not seen it suggested by any writer on the subject of the taxation question. It has been long in use in other countries successfully. This plan is to have U. S. assay offices established in the principal mining towns along the coast, to which the miners could bring their crude bullion, have it assayed and and stamped with its value, *certified by the Government seal*, for which the Government could charge a percentage, which would be less than that charged by private assayers, and still sufficient to produce a large income. This the miners would gain both in expense of assay, and in having the Government stamp, by which their bullion would become immediately a medium of exchange nearly as good as coin, and capable of shipment abroad as such.

This would not interfere materially with the interests of private assayers who will have plenty of work for years in assaying ores, and reducing them. Offering this for the interest of all parties, we remain, Yours truly,

Bullion.

The Gold Mines of New Zealand.—Notwithstanding the continued progress of the War of Rebellion in New Zealand, the gold mines of that island are improving in the quantity of yield. For the fortnight ending Saturday, Sept. 26th, $160,000 had been brought in by the Escort. Seven hundred emigrants had just arrived at the mines in two ships, one from London and the other from Glasgow.

The government had just built a small Ironclad much after the Monitor fashion, with which to drive the rebels from some of their strongholds on the rivers.

Florence Sewing Machine.—This new and elegant candidate for favor among the sewing fraternity of this State, is an ingenious production and finished, specimen of mechanism, such as we always look upon with favor. As Mr. Hill, the agent for this Coast, aptly remarks, "it must be seen to be appreciated." From viewing its operations, we can say the Florence readily performs the service claimed for it with singular ease and grace.

Communications.

[Written for the Mining and Scientific Press.]

Mining and Metallurgical Journals.

Notice of the Principal Periodicals Devoted to Mining and Metallurgy Published Throughout the World.

The interests of the miner and metallurgist are thoroughly cared for by all European governments, and everything connected with these departments of practical science, in most of the states of the Continent, is carefully watched over by men of long experience and extensive acquirements; therefore nearly all these States publish official or government mining journals, or periodicals devoted to this branch and subjects allied with it.

The *Annales des Mines* is the most important mining periodical in the world. It is the organ of the Imperial Corps of Mines and of Roads and Bridges, and is published at Paris, in six octavo numbers per year, making two stout volumes, filled with original contributions on all subjects connected with mining and metallurgy; together with a good deal of matter relating to steam engines, locomotives and railroads. These papers are almost always from the pens of regularly educated mining engineers; they are not intended to be popular, but are rather for the use of those who have received a thorough mathematical and scientific training. The *Annales des Mines* has been in regular course of publication for more than fifty years, and the series is by far the most important book a mining engineer can have in his library.

There is also a more popular mining periodical published in Paris, called the *Journal des Mines*, which was established by private parties and which contains reports of sales of mining stocks and other particulars of a more purely commercial and less scientific character.

The *Revue Universelle des Mines*, published every two months at Liege, and edited by De. Cuyper, an eminent mining engineer, is the organ of the mining interests of that hussy little kingdom, Belgium; it has many valuable articles on mining and metallurgy.

Several of the German States support one or more periodicals devoted to mining. The *Zeitschrift fur das Berg Hutten und Salinenwesen* is the Prussian official mining journal; it is published quarterly, in quarto form, at Berlin, and has been established for about ten years. It is particularly devoted to the interests of Prussian mining and smelting, and has the fullest and completest statistics of these branches as developed in that country, with elaborate papers on the improvements in mining machinery and smelting processes, which have been introduced into the mines and furnaces, and critical notices of all works published in other countries on these subjects.

For the last two years it has been accompanied by a supplement, giving full description and working drawings of the most important new Prussian mining and smelting establishments. Both of these publications are official, and of course thoroughly reliable and complete in everything connected with mining in the Prussian Kingdom.

The organ of the Saxon Government mining interests is a yearly octavo publication called the "*Jahrbuch fur den Berg and Huttenmann*," in which the most minute statistics are of all the Government mines and furnaces. But the principal Saxon mining publication is the well known "*Berg und Huttenmannische Zeitung*," published weekly in quarto form at Freiberg and Leipzig. It is edited by Bornemann & Kerl, the last named of whom is a Professor in the Mining School of Clausthal, and who is well known by his excellent work on Metallurgy. This periodical contains many valuable articles on the Mines of all parts of the world, most of which are written by former pupils of the Freiberg Mining School; it has been in course of publication for the last twenty-one years.

The "*Berggeist*" is a small but valuable mining paper, published twice a week, in small quarto form, at Cologne. It is especially devoted to the mining interests of Rhenish Prussia.

There is also a weekly mining paper published at Vienna, called the "*Oesterreichische Zeitschrift fur Berg-und Huttenwesen*;" this is particularly devoted to the development of the very important mining interests of the Austrian Empire.

A yearly publication at Vienna, with text in quarto and folio plates, edited by a high mining official and called "*Erfahrungen berg im und hutten-mannischen Maschinen, Bau und aufbereitungs-wesen*," giving the results of all trials of new mining, smelting and ore dressing machinery made under the superintendence of the Austrian Government, with full working drawings of the same. It is an admirable publication, since Austria is an important mining State, and one—in which many new processes have been thoroughly examined and valuable results obtained.

There is also a quarterly journal published at Bonn and devoted exclusively to mining law, it is called the "*Zeitschrift fur Bergrecht*."

The number of journals and periodicals devoted to mining, which are published in the English language is but small.

The "*Mining Journal*," a large folio, published at London, contains some valuable matter, especially of a commercial character; but has little scientific value. Is is especially intended for those who buy and sell English mining stocks and as a register of the immense transactions which are carried on in that greatest of all mining countries.

The want which has been so long felt in Great Britain of a more thorough mining periodical has been lately to a considerable extent supplied by the "*Mining and Smelting Magazine*" published monthly at London, in octavo form. This magazine was commenced in 1862, and has thus far been well sustained.

The British government publishes yearly the complete statistics of the mines and furnaces, as collected and arranged by Mr. Hunt, Keeper of Mining Records. Singular as it may seem, it is only within a few years that this has been done: before Mr. Hunt took up this department, our knowledge of the yield of the mines in England was exceedingly imperfect.

Several periodicals devoted to mining and metallurgy have been started in the United States; but there is not one now published, except the *Mining and Scientific Press* of San Francisco. The *Mining Magazine*, published at New York, first as a monthly and afterwards as a quarterly, died a lingering death some two years ago. San Francisco is certainly, if any where on this continent, the place where a mining periodical should be well supported; for nowhere are the mining interests greater, in proportion to the wealth of the community than here. And furthermore, there should be here a library, where complete sets of all the mining periodicals published throughout the world should be accessible to the public; for miners and smelters are too much in the dark as to what is doing in these departments in other countries.

J. D. W.

A TRIP TO THE MINES.

We left San Francisco at 4 o'clock P M. for Stockton, in one of the densest fogs that ever enveloped the Bay, but Capt. Conklin can navigate the Camelia between the Two Brothers in fog and night "as dark as Erebus," and not tread on their coat tails. We arrived at Stockton at 10½ A. M the next morning. All of the stages had left and we must wait two days before proceeding on our journey. After dining from an original bill of fare at the Webber House, kept by Messrs. Dillon & Gross, we took a survey of the town from the top of the Court House, which is much higher than the Jail or Gallows. Stockton appears like a vast carpet, of some grand design spread out nearly as far as the eye can reach, with its old oaks fixed almost as regularly as an orchardist would plant his appletrees. It must be very beautiful in early summer, but the frosts have now given it a sombre and brown appearance.

GLOBE FOUNDRY.

This Foundry and Machine Shop is owned by Messrs. Briggs & Keep. They employ about twenty-five hands, and all kinds of mill and mining machinery are built by them in a very thorough and substantial manner. They are now engaged upon and have nearly completed a Quartz Mill and hoisting machinery for the Spring Valley Gold Mining Company, Calaveras County. This mill, when finished, will recommend itself. The proprietors think that they can make a saving of freight from this city to Stockton for all of their patrons.

OVER THE PLAINS.

Up at 5 o'clock in the morning, carry your baggage to the Stage Office, take your seat, when crack goes the driver's whip and off we go; but stop! We have one more passenger, only *one*, which proves to be a woman with two children; children must have room, and room is found, when on we go. In four miles we stop to water the horses and take an inventory; find nine men, one woman, two small children, one bottle of Squarza's coffee punch and one small dog.

Breakfast at the Twelve Mile House; fresh horses are added and on we go again. Nothing now presents itself to the eye of the traveler but vast pampas or plains, with here and there a few emaciated cattle, lazily and feebly crawling along, while clamorous crows are perched upon some neighboring bough as if calling to them to give it up and die, and lazily soaring in mid air are turkey buzzards awaiting too surely for their expectant prey. Ought not this great evil of leaving cattle upon the plains to die, and so near civilization, to be remedied.

LAST CHANCE.

This was a newly built house, out on the Plains, with a sign over the door with the words "Last Chance" upon it. What could it mean? Were we in danger? or was it the last chance to drink, eat, smoke or sleep? Oh no; out comes the proprietor, a man standing six feet in his stockings, good looking and about forty years old. He tells the driver that he wants a housekeeper; none of your city belles, who promenade Montgomery street, smelling of perfume and insolence, but one who can wash, bake, iron, tend bar and feed the chickens; one who will sing when the old tea kettle is humming on the stove. This, then, accounted for the sign—the "Last Chance" to get married! The driver made an arrangement with him to call when he should return and take his order. Farther on we came to oak openings, near the Stanislaus river. Swine abound here, feeding upon the mast which falls from the oaks (and piggy here has the advantage over the poor cattle; but beside almost every porker stands a jackdaw, like some solitary sentinel in white shoulder straps. Whether 'tis his evil genius still urging him to cast himself into the sea, or whether to remind him of this bold, brave deed once committed, I know not, but piggy roots on, intent upon mast and seemingly unconcerned as to whether his companion is beast or angel, bird or devil.

HORNITOS,

Or place of many ovens, is built in the form of a hollow square; its public buildings are not large, but very numerous. In the center of the square stands the town pump; but the water is not drawn often enough to free it from the rust of iron which comes up from the pump. Here are found all classes—the grey Southerner and the cool New Englander, gentlemen from England and Ireland, the Asiatic and the Mongolian, the Mexican and his Señora.

HORNITOS MILL.

Nestling in the sunlight, in a beautiful valley, about one and a half miles from the village, is the new mill, built by the Hornitos Mining Company. The main building is 48 by 52 feet. The engine is a 14-inch cylinder and 30-inch stroke, and is 60-horse power. The boiler is 24 feet long, with five 8-inch flues. The

Bryan batteires are used, consisting of 20 stamps, each stamp so arranged that it can be worked independent of the other. Each battery is lined with copper and acts as an amalgamator in itself, yet amalgamators are used which are upon the shaking table principle, but new in conception, and are said to possess advantages over old inventions. The boiler and amalgamators are supplied with water from two wells, by a jack-head force pump which lifts the water into a large tank upon the top of the building. The rock is hoisted upon an incline railway to the second story, where it is crushed by a stone breaker, before it enters the battery, for further reduction.

This mill was built by Messrs. Goddard & Co., at the Pacific Iron Works of this city, under the quick and skillful eye of Mr. S. H. Lea, engineer. Every piece of this mill fits like smooth Mosaic, and so perfect are all of its combinations that standing upon the beams which support the main shaft, when the mill is in motion, scarcely a jar or tremble is perceptible.

THE MINE.

The mine is situated about 300 yards from the mill and is one vast pile of quartz, nearly six thousand tons of which is now ready for crushing. On the vein several shafts or inclines have been sunk, which show very rich gold bearing quartz. The hill sides are covered with an abundance of live oak which is used by the mill for steam. Fourteen new tenement houses have been erected, which gives the place quite the air of a neat village where scandal and bedbugs ought not to come. The whole is under the superintendence of Mr. L. A. Reux, and to him and others, (whose names we cannot pronounce, owing to our slight knowledge of French,) we desire to express our thanks for the attention paid to us as we as the valuable specimens presented to us for our cabinet.

COPPER MINES.

The Buttes—(not the Cockney's bunts!) This vein is located about four miles from Hornitos in a southerly direction, and contains 5000 feet. They have sunk a shaft 80 feet and are now drifting for the vein or lode. (?) They have been at work about four months. Croppings very strong, (iron cap,) but they will have to sink much deeper for copper than what they now anticipate, and at considerable expense; but owners work here and without kid gloves on, and if owners can't work a mine cheap who can?

THE GUYASCUTUS

This mine was named by the villagers of Hornitos, and as the story goes derived its name from the operations of two smarties in a town in some one of the Western States. The sharpers advertised to exhibit in the town upon a certain night, two animals of a new species called the guyascutus and the prock. The guyascutus could walk upon the steepest roofs of houses, one fore leg and one hind leg having been formed shorter than their opposites, and the two could perform many wonderful feats. The villagers assembled upon the evening advertised and paid their admission fee. When the house had become quite full, the would be lecturer came before the audience, apparently in a terrible fright, shouting to the astonished people who were gathered, that the guyascutus had become loose and had eaten up the prock, and would destroy them also. The villagers, terror stricken, fled and left their houses to be plundered by the sharpers.

This mine has a shaft down about 70 feet. The company are not sinking upon the lead, owing to a heavy bed of muadic which largely impregnates the vein. We hope that the expenses of working the Guyascutus, will not eat the enterprising villagers out of house and home; yet great depth may have to be arrived at before copper ore in any quantity will be taken out.

ANOTHER NEW MINING DISTRICT, called "Mountain Wells," has been laid out about eighty miles east of Virginia City. A new city has also been started there, called La Platta.

Silver Mountain District.

(CONTINUED.)

In the Pennsylvania Cañon, only a short distance from Silver Mountain City, are several prominent claims. The Chrysopholis Company have a tunnel extending 110 feet, but have not yet struck their ledge. The Metropolitan Company have tunneled some 60 feet and will strike their ledge after about 50 feet more work. They will undoubtedly find it to yield richly, as the croppings show most excellent indications. Above these claims are the Pennsylvania Company, who have struck their ledge and are about taking out good pay ores. Following up the Middle Fork of Silver Creek, and about 1½ miles from the town, is a section which bids fair to be equal, if not superior, to any other ground in the district. Very little attention was paid to this section, until this season, from the fact that the prospectors were pre-engaged with work in the immediate vicinity of the town. Up this branch are located the Francis Emma Wright, Lone Star, Young America, Apollo, Marlow, Mary Ann, Occidental, Dictator and Star of Hope. The principal claim on this stream is the Apollo which, was taken up in May last and has been sufficiently worked to show fine pay rock. The ledge has been cleared as far as the tunnel has been worked, some 90 feet, and improves in richness as the work progresses. It bids fair, in fact, to become one of the best claims in the district. Upon the claim is a magnificent mill site with abundance of water to run a large mill. Next adjoining the Apollo, is the Mayflower Company, and on the opposite side is the Mountain Oak claim. Above these, are the Casteel, Frowning Beauty, Crinoline, Marshall, and Rough and Ready, all of which are being thoroughly prospected. The Crinoline Co. have sunk a shaft 50 feet along side their ledge and drifted through it. They find excellent rock which shows virgin silver to the naked eye.

THE RAYMOND DISTRICT

Was formed in June last, a number of ledges having been discovered at that time. It is situated four miles from Silver Mountain and an equal distance from Markleyville. The claims are mostly taken up and owned by parties from Silver Mountain. The principal ledges in this district are the Sacramento, Wyoming, St. Lawrence, Great Eastern, Summit, Brown, Norman and many others. The Sacramento have sunk 65 feet on their ledge and are now getting out pay rock. The preponderating metal found in this district is silver, although in many instances gold is extracted in considerable quantity. In Silver Mountain, about 400 claims have been located, 100 of which will average some 100 feet tunneling each.

THE ASPECT OF THE COUNTRY

Is mountainous and it is heavily wooded. As before remarked, the supply of timber for lumber and fuel is amply sufficient for all wants and may in fact be said to be inexhaustible. The timber is chiefly mountain pine of large size and very free from knots. The price of wood for fuel is about $2 per cord.

Silver Creek, running through Silver Mountain and at a distance of three miles from Carson River, has, in its course, a fall of about 1000 feet, affording sufficient power to run mills of the largest capacity. The stream is fed from never failing mountain springs, augmented by the snows melting on the mountains during the summer season.

THE CLIMATE

From May to November is delightful, the days being agreeably warm, with a gentle breeze blowing from the mountains, which makes this a very desirable place of residence during the summer months. The nights are cool but comfortable. Snow generally commences to fall about the middle of November, but in no great quantities before the first of January. It is rarely that the depth of snow exceeds three feet in the town. The altitude of Silver Mountain is some 7000 feet; that of the highest peak west of the town about 10,000.

The great drawback to the developments and improvements in the mines of this prolific district has been chiefly owing to the scarcity of capital and also a fear that if the mines were controlled by men of means, they would be frozen out, after all their experience and labor. Two years trial have demonstrated the fact that silver mines cannot be worked to any advantage without considerable outlay, and holders of good claims are now willing to sell on reasonable terms. The coming season will be a prosperous one for this district. Capitalists are beginning to appreciate the immense source of the wealth in the mines. The extent of the claims, the abundance of wood and water, the facilities of transportation and the healthy climate, are all incentives of immigration and cannot fail to draw a large proportion of our mining population to this district during the next season.

ESMERALDA.—The Bolivia Company, on Aurora Hill, are now down about seventy feet, and recently let another contract to sink still deeper on the ledge. There are over one hundred members in this company, and the claim is worked steadily. The ledge is very wide, and the work assays well. Operations continue vigorously as ever on the Antelope, Utah, and Iowa, all claims well known and of established reputation. The Davenport, adjoining the Comstock, is working, and their prospects are represented as decidedly good. The Cortez, notwithstanding their trouble with the Utah, continue to work steadily, and get out as rich rock as can be found in the Esmeralda District. The Bamboo Company, according to the *Times*, has recently assumed quite a business look. It is the intention of the company, henceforth, to work this mine vigorously. The superintendent expects that within sixty days he will be able to raise from 300 to 600 tons of good pay rock monthly—such rock as has heretofore paid $57 a ton and upwards. This mine is mainly in few hands. There is a large amount of ore now on the ground which is now being crushed.

VALUABLE LECTURES.— A course of lectures is to be delivered this Winter, before the Mechanic's Institute of this city; the proceeds of which are to be applied towards paying off the indebtedness of the Institute. Professors Whitney and Brewer, of the State Geological Society, and Rev. T. Starr King have each volunteered their services for one lecture each. It is to be hoped that the programme may be fully carried out, and that the citizens may be treated, during the Winter, to a course of lectures, which shall be creditable to the association, under whose auspicies and for whose benefit they are proposed, and to the gentlemen who may be employed to fill up the series.

THE OPHIR AND BURNING MOSCOW CONTROVERSY.—Judge North has rendered a decision in the application of the Ophir Company for an injunction against the Burning Moscow. He fails to see that the two leads are identical, and until that is demonstrated by actual proof, he refuses to enjoin the Burning Moscow Company from working their mine. We should judge from his decision that the ledges are distinct, although one lies directly over the other.

SOME very extraordinary reports are made about the discovery of an extensive lead mine, called Las Vegas, situated up the Colorado river. The ore yields eighty per cent., and it is said that the value of the mine, from its known extent and richness, is inestimable.

ANOTHER PAINT MINE.—Some parties have just discovered and located a lead of red ochre of a very superb quality, near Virginia City and just south of the Gould and Curry lower tunnel. A number of experiments with the paint have been made, all of which were entirely satisfactory. It is pronounced superior to any on the Pacific coast. The company who have located the mine will shortly set up machinery for preparing the paint for use.

THE BULLION.—Steam machinery, of an excellent and costly character, has just been put up on the Bullion mine, Gold Hill. It was set in motion, for the first time, on Christmas day.

The Lady Bryan Mine.

The "Lady Bryan" is one of the earliest of the locations near Virginia City apart from the Comstock lode. The mine appears upon the surface like a vast pile of quartz and porphyry about 150 feet in width and rising to a hight which would make a prominent land mark in a level country for many miles around. This mine has had its frequent "ups and downs," the chief of which, however, is its present movement. Within about a week after the late "strike" this stock advanced from $8 to $70 per foot—nearly 900 per cent. It has since receded and is now quoted at $40. We condense the following particulars with regard to the present discovery, from the local column of the Virginia *Enterprise:*

Having heard that a rich mass of ore had been struck in the mine—we were anxious to see it for ourself and examine its quality and, so far as possible, its extent. It was expressly for this purpose that we visited the mine.

On arriving at the mouth of the tunnel we found ten or twelve gentlemen from this city examining a quantity of ore that had been brought out of the mine and was now deposited at the mouth of the tunnel. Among these gentlemen we recognized some of the shrewdest operators in mining stocks and two or three men whose knowledge of ores and mines, both scientific and practical, is not surpassed by that of any person in the Territory. All were well pleased with the ores before them—in fact no person having any knowledge at all of silver ores could doubt its richness. Altogether some twenty tons of ore have been brought out of the mine. The best of this has been sacked up, yet there is a large amount of excellent ore heaped up on the dump. We picked out several lumps of black sulphuret ore that were as fine as any that can be found in the best of the mines in this city on the Comstock lead.

In company with half-a-dozen gentlemen who wished to see the spot from which all this rich ore was taken, we entered the mouth of the tunnel 354 feet in length, but we did not follow it to the end. After proceeding the distance of 264 feet we came to a shaft 57 feet in depth, which it was necessary for us to descend.. We were lowered to the bottom —here we found a drift about 18 feet in length, following which to its end we came to a cross-cut, and here it is the ore was found. The opening from which the ore we saw above was taken is 19 feet long, some six feet high, and on the average seven feet in width. Here, on both sides of the drift, in the end and overhead, we found ore of the same quality as that we had seen above in sacks and heaps. A mining engineer, whose name we did not learn, was with our party in the drift. He and others of the party, with picks and sledges, broke down the ore from all parts of the opening in which we stood, and after thus examining the sides and top, we shoveled away the loose dirt and rock in two or three places, and thoroughly examined the bottom by digging out lumps of the ore. We think every person present was perfectly satisfied with the evidences of wealth visible on every side; and we have no right to suspect any one of the dissimulation who saw these things, and seeing them, acknowledged a belief in them. We can say no more of the extent of the deposit of ore we have been describing than we have already said. There may be a thousand tons in this spot, or there may not be over a hundred or two. But it is quite certain that having found what they have the company will find other deposits below it, or at other points along the lead.

On coming out of the mine, we took a look at the hoisting works. The building is 60 by 24 feet in size and is substantial in every respect. The engine is of 30 horse power. The pump is of 8-inch bore and five-foot stroke. A good deal of water is coming into the main extraction shaft which is now 180 feet in depth. About 100 gallons per minute. These hoisting and pumping works, with buildings and all complete cost the company $20,000. The machinery is all in perfect condition and well put up. The machinery was first started about 70 days ago.

At the house of the Superintendent we were shown a fine collection of specimens from the mine. In one of these native gold was visible and two or three small bits of wire silver. In another we saw a number of scales of pure leaf silver—precisely similar to what we have seen in rock in the Gould & Curry.

The mine is under the superintendence of Mr. James H. Owens, who erected the machinery and brought the whole mine to its present promising position, assisted by his efficient foreman, Mr. James Opie. A fine stream of water runs from the mine—amply sufficient for the mill. Wood may be floated down the Carson to a point but a few miles distant from the mill. In short, we like the prospects of the company. As for the salting, we are ready to answer that all the salting that has been done in the mine is the work of the Almighty.

The largest clean-up ever made from one day's run of the Gould & Curry mill, was on the 23d instant. The weight of unretorted amalgam taken out was 3,555 pounds. This will make about one-fifth that weight in bars, and is worth in the neighborhood of $20,000.

This company is making another of its characteristic "improvements." The company is building a large, stone culvert, below the mill, which is to be several hundred feet in length, and some immense blocks of granite are being used in its construction. These are hoisted and lowered into their places by means of two huge derricks. A large number of men are engaged on this wall, which is some six to eight feet high by four in thickness. The drain is several feet in width and will carry all the water of the ravine.

Go to Work.—The idea of "respectable employment" is the rock upon which thousands split, and shipwreck themselves and all who depend on them. All employments are respectable that bring honest gains. The laborer who is willing to turn his hands to anything is as respectable as the clerk or dapper store tender. Indeed the man who is ready to work whenever work offers, whatever it may be, rather than lie idle and beg, is a far more respectable man than one who turns up his nose at hard labor, wearies his friends with his complaints because he can get nothing respectable to do, pockets their benefactions without thankfulness, and goes on from day to day, a useless, lazy grumbler.

Cornish Miners En Route for Lake Superior.—The *Detroit Commercial Advertiser* of September 5th, says:

"Seventy miners, just from Cornwall, England, left this city last Saturday for Lake Superior. About the same number passed up on the Saturday previous. They will no doubt be followed by others. The demand for labor is so great in the Upper Peninsula that all who migrate thither will be sure of employment."

A Locomotive Engine will carry two hundred tonsn at a cost of fuel scarcely exceeding the cost of corn and hay which a pack mule consumed before the locomotive was invented, in conveying a load of three hundred weight an equal distance. The same difference of cost would be saved the community by using steam engines upon city railroads instead of horses, and every saving of cost is so much capital set free to employ more labor, and add to the general accumulation of wealth.

Extending the Arsenals.—The *Boston Herald* says that Government is considering a project to extend the area of the Watertown (Mass.) Arsenal, now one of the most important Government works in the country, so as to include a foundry for the casting of cannon, etc. Within the past few months carriages for field-pieces, made altogether of iron, have been manufactured at the arsenal.

Opposes It.—The *Humboldt Register* opposes the ratification of the Constitution, on the ground of its compelling the taxation of possessory rights to mines in the Territory.

Another Earthquake.—There was another vigorous earthqnake at a quarter of three on Tuesday morning.

A mason at Harrisburg, Penn., while dressing a block of stone, found a large petrified rattlesnake inside.

Photo-sculpture is a recent fashion of Paris. Statuetts in plaster, executed to the life, are becoming as common as photographs.

Nature, foreseeing that her children would be tampering with minerals, hid them in the earth, and covered them with herbs and plants, as fitter for their use.

Quartz Mill.—A fine twenty-stamp mill, constructed in Stockton, was shipped from that city a few days since, *en route* for the Crown Lead, Mariposa county.

Hung Fire.—An attempt was made on the 29th of November to launch the iron-clad *Dictator*, at New York, but without success. A large concourse of spectators was present, when, at 11 o'clock the workmen commenced to wedge out the blocks and clear out the iron-clad for launching. In fifteen minutes the ship began to move slowly down the ways under the influence of a powerful hydraulic ram, but she soon ceased to move. Steam tugs were then employed, but failed to move her. The failure is attributed to the settling of the ground, the undulation of the launching-ways, and the defective composition of the tallow used for lubricating the ways. The men had worked most of the night cutting away the shores, but when they knocked away the props in the morning the obstinate *Dictator* only moved a few inches, and then settled down again. A powerful hydraulic pusher of 425 tons power, and a swinging ram handled by 50 men, were applied to the bows and launch-ways without producing the least effect. A strong manilla hawser was next made fast to the eye-balls and bits on the stern, and run out a couple of steam tugs on the river, but the team of steamers could not budge the iron ship. A third, fourth, fifth, sixth, seventh and eighth were fastened to the tow-line, and they pulled and puffed, and strained and jerked, to little purpose, and after two hours' hard work it was found that the state of the tide, which had fallen, made it necessary to postpone any further attempts until more power could be applied. The *Dictator* was the next day started some four feet by the aid of several tugs, and stopped. The launch was finally accomplished on the 26th of December.

The Lake Superior Silver Mines.—The miners in the vicinity of Marquette, Lake Superior, are wild over the rich deposits of silver in their neighborhood. In one locality it was believed that fifty tons of ore could be got out in a week. The veins are said to be generally well defined, and of a character to be easily mined.

The latest advices from these mines appear to fully confirm previous accounts of the richness of the newly discovered veins. A letter, dated October 26 from S. H. Douglass, Professor of Chemistry in the Michigan University of Ann Arbor, who had received some of the ore for assay, concludes as follows:—

"It contains 3.26 per cent. of pure silver, or upward of sixty five pounds of silver to the ton of ore. I suppose that I took an average of the specimen, yet the yield is very large. I send you the result with a sample of the silver extracted. I have worked nights to complete the analysis in order to send it early. I will make a second analysis.

Rich Rock.—The *Nevada Transcript* of December 26th has the following notice of sulphuret rock: We saw yesterday some fine specimens of sulphuret rock from the Fellowes lead, on German bar. The rock was nearly all sulphurets, and is said to be extremly rich. Free gold was sticking out in many places, but the sulphurets are what are relied on. The rock yields but moderately under the stamps. The lead, we learn, has reached one of its thin places where it is mostly of the character of the specimens we saw and is far richer than it is in the thicker parts. This lead is well known for its almost fabulous pockets, from one of which George Fellowes took more than a hundred thousand dollars two years ago. All the rock will pay for crushing and in some places the lead is fifteen feet thick. When it is taken into consideration that now and then a rich pocket is struck, and that the sulphurets which exist in the rock in large quantities are worth from fifty to as many thousand dollars per ton, it will be generally supposed that such a lead ought to be among the paying ones of the land.

Large Hammer Casting.—At the Onseburn Engine Works there has been cast a large frame for a steam-hammer, on Mr. Robert Morrison's patent. The pit for the same was 45 feet long, 24 feet wide, and 12 feet deep, and required about 55 tons of metal, 28 tons of which were held in a large air-furnace erected for the purpose, and the remainder in two ladles. The running of the metal occupied five minutes and nine secouds. The whole of the operations were under the able management of Mr. J. Turnbull, and were successfully carried out. A number of ladies and gentlemen were present during the casting.—*Newcastle Daily Journal*, about Nov. 1st, 1863.

A Sydney paper states that two diamonds have recently been found in the mines.

[Written for the Mining and Scientific Press.]

Knight's Ferry.

BY OUR TRAVELING CORRESPONDENT.

Mr. Editor:—I stated in my last letter that I had finished the copper mines of Calaveras county. I thought it better, however, being in this section, to visit those lying in the adjoining part of Tuolumne county, on my way to Sonora. It is well I did so, for I found several parties interested were expecting me, who had began to think I intended to slight them. I shall commence with those mines in the neighborhood of Knight's Ferry.

This little town lies on the banks of the Stanislaus, and was once famous for its placer diggings. It had also hill diggings, but these have also given out of late, with one or two exceptions. I understand the high ridge on the north side of the town, a portion of which has been worked, would pay fair wages from one end to the other, if the water ditch was large enough and high enough. It is contemplated I believe, to cut a new ditch for this purpose; and if done, no doubt it would materially benefit the place.

The future prosperity, however, of this pretty little village, does not depend upon that operation, by any means. As at Campo Seco, the copper age is opening upon it, under prospects which bid fair, long before they can cut the new ditch, to give it a life, business and importance, but few of its inhabitants dream of at present. Indeed, I found those most interested in the welfare of the town, as merchants or land-owners, were precisely those *least* inclined to support our efforts to bring its copper mines into notice. By and bye, they will see their mistake, and act with more sagacity.

Immediately on calling upon Mr. Hill, merchant, a firm believer in copper, he ordered his buggy; and with Mr. Fisher, post-master, accompanied me round. Crossing the river Stanislaus, and going out on the Sonora road, some two miles, I found the mines already opened, lying pretty close together, The first we visited was the

Clear Creek and Webster, Consolidated.

It contains 3000 feet in single foot shares. Main shaft 87 feet—opening well with gossan, and an east wall from the beginning, and now showing the west wall. The rock is pure and carries large quantities of mundie and yellow sulphurets. According to indications at present, 125 feet ought to give a strong, rich vein of ore. To the north-east of this claim, a short distance, on another vein is the

Vicksburg.

It contains 5850 feet in single foot shares. Main shaft 80 feet. Work being suspended for a time, I could not go down; but the croppings and rock are very handsome, strong and pure. This eventually will be a valuable mine. On the north continuation of the Vicksburg is the

Andrew Jackson.

It contains 4450 feet in single foot shares; with two shafts, respectively 22 and 30 feet deep. The shafts both open well, on fine croppings, and the rock in each shows yellow sulphurets. In the latter there is a very heavy east of mundie. On this hill, all over, the croppings are very much scattered, making the location to sink difficult to determine upon. I prefer the upper shaft. On the south continuation of the Vicksburg, about a mile is the

American Eagle.

It contains 7800 feet in single foot shares. Main shaft 60 feet, with a well defined vein of 6 feet, with both walls and fincckan—making it an established fact. Like the Clear Creek, all that is wanted here is depth. Ore may be struck any day. This is a first-class claim. South-west of this, a short walk, is the

Clear Cat.

It contains 5250 feet in 17 shares. Main shaft 35 feet showing a good vein with both walls. The rock is, however, corrupt; and they will have to go considerably deeper than they allow, before they strike good ore. Nevertheless, the prospect is good. South-east of these claims, half a mile, is the

Nelly and Julia.

It contains 3000 feet in single foot shares. Here they are running a tunnel, already 60 feet out of 150 feet, they calculate to run before cutting the vein. The rock is a good prophecy, carrying strong sulphurets of iron and copper pyrites. The claim is named after two well known San Francisco ladies, and promises to be good. West considerably of this lies the

Copperhead Consolidated.

It contains 3750 feet in single foot shares, with three shafts; the first, 40 feet, the two latter, each 30 feet; the third is considered the most promising. I did not see this claim, and cannot therefore explain the cause of sinking so many shafts. The people here hunting copper are terribly afraid of going down; but they will have to do so finally. By and by they will find one deep shaft, as I have already said, is worth a score of shallow ones. The next claim is the

Victoria.

It contains 3750 feet in single foot shares. Main shaft 12 feet, looking very well. This is a south-east continuation of the American Eagle, and will probably in the end be worthy the name it bears. On the north extension of the above, is the

Ally and Julia.

It contains 3000 feet in single foot shares. Main shaft 12 feet, looking equaly well. This vein, all through, is very strong and promising. Proceeding to the extreme west of this system, in a straight line, nearly from the time, some two miles is the

Live Oak.

It contains somewhere about 4000 feet. I believe it is incorporated. Main shaft 86 feet, but work being suspended here, I did not go to the mine. It is the deepest shaft in the district, and the mine generally is spoken of favorably.

Other Mines.

Such are the mines of Knight's Ferry, already in operation. There are, however, a multitude of others, which at present are simply located. The mines are on the Gopher veins, or Hog Hill, as it is more familiarly termed, which our readers may remember is the extreme western system of the Copperopolis formation. Unquestionably the veins are strongly developed through this section, more so I think than at Gopher. Mr. Hill and myself took great pains to locate if possible, the Napoleon and its parallels; but it was difficult to do so, from the fact that *here* are five distinct veins. We took our lines from Hog Hill, very plainly in sight, and made two run on the western and three on the eastern side. It is difficult, however, to decide which are on the Napoleon vein. If Mr. Collier is correct in tracing his old claim to this place, and in the location of the shaft he has commenced, then the Andrew Jackson, the Vicksburg and American Eagle are the lucky ones.

However this may be, there is no question but that the mines here look remarkably well. The country around also affords good shipping facilities. They are only backward from want of capital. Altogether they afford a good opportunity for investment; but it must be made immediately, before copper is struck. Good chances can be had at present. In a short time it will be too late to take advantage of them, and then the croaking wiseacres of Knight's Ferry and elsewhere, who know as much about copper mining as they do about etymology, syntax and prosidy, will feel very cheap.

I shall next take the mines nine miles above, from the Crimea House to the Tuolumne river, supposed to be on the continuation of the Copperopolis lode proper. In the meantime, I beg to acknowledge the extreme politeness of Mr. Hill and family, Mr. Fisher and others, and trust Knight's Ferry will never more be destroyed by large fires, or washed away by great floods, but enjoy to the fullest measure the prosperity before it.

L. H.

Hints to Prospectors.

BY J. H. CHURCHILL, A. M.

Prospectors! is your occupation gone? Four thousand companies demanding a vast deal more capital than is invested in mining from one end of the world to the other, and more men than exist in the whole State, would seem to cry "Hold, enough!" But no, you say "as long as there is so much ground unprospected, it will pay us the best of anything." You like it, but with so much competition for means and men; let us to the point.

I. What constitutes the value of a mine?

A short time ago it was a pocket specimen, the counterpart (??) of another, said to be a marvel of richness by somebody—an assayer doubtless, perhaps a chemist. A shorter time since it was "a working test"—a little larger quantity—this time a skinfull from La Paz or Mexico, a bagfull from the interior, and this hurried through a fire with expeditious fluxes, or what not, too costly for practical use. It had then yielded so much by *working process*. It was proved that the skins and bags on Montgomery, Clay, California or Washington streets, contained what? Well, a mine of wealth of course! Did it ever occur to you, copper prospectors, that the essence of the *Swansea working process* was mixing *different kinds of ore?* Are you aware that the furnace bottoms absorb an unknown and varying amount of metal?—Do you know, prospectors for silver, that above a low red heat silver ores are volatile?—that with different metals this loss varies? Do you know that with zincblende, for instance, even in most experienced hands* one half the silver has been lost in this way? In a true working process much of this may be recovered in the flues. Where does yours go, to profit or loss?

Remember that these results are dependent on the other minerals present. What guide have you in these so called working processes as to the quantity or even existence of the metals that are sublimed up the chimney with your silver? If these losses are estimated for, perhaps it is no concern of yours if they are rated a little too high. "It will help to bring the company out." Such has been the case. Mines, I should say "feet," have been hitherto bought by men and women relying upon some single feature, as a rich bachelor may marry at a single glance, charmed it may be by a pretty bonnet which is no part of the woman at all.

At the present time while capitalists are so much more cautious it will serve prospectors to attend somewhat more to the details which go to make up a mine—It will be well for them to provide themselves with particulars on such points as these.

1. In regard to the situation, its being favorable for dressing the ore as in case of tin—for supplying fuel, and perhaps salt, as with silver ores—for running adits where water is to be got rid of—for easy freight, where bulky ores are to be moved—for timber where the veins are wide or the ground weak—a sufficiently rich neighborhood to ensure supplies, food and skilled labor.

II. The geological character of the country. On this point more attention is to be paid to the features which mark rich leads in the same district than in others. Certain bedrocks are associated generally with certain minerals The coincidences of the same bed-rocks—the same veinstones—the same direction or strike whether the vein be an extension or parallel—the same dip—may in the one case be favorable guides, at a distance they will be quite uncertain.

*Malaguti and Durocher, Paris.

III. If the work of prospecting has been carried far enough to develope the dip of the vein and its thickness, it is very important, where the latter varies, to examiue the walls for signs of ahrasion, such as striœ, or grooves, which may indicate a sliding or grindiug of one face upon the other—or where these arc quite ahsent, to observe the succession of the thick and thin parts—if these are so connected, that if slid back, the projections of one side would tally with the hollows of the other mutually, the symptoms of thinning out may be disregarded, espccially dcposits of clay and broken bedrock, above the narrow parts. A thinning out on reaching a new bedrock will very probably be fatal.

[To be concluded in our next.]

[Written for the Mining and Scientific Press.]

Letter form Lower Califonia.

La Paz, Dec. 19, 1863.

Eds. Minino ann Scientific Press:—The mining intercsts of this Peninsula never looked so promising as at the present moment. Many of the more prominent and wealthy companies are dcveloping their mines with an energy beyond all praise. The most universal confidencc is entertained that these mines are not only immensely rich, but that they are practically inexhaustible.

Having taken a trip on the fourth of this month to the miuing district of San Antonio, I have thought that a few brief items might prove of inter est to your readers. The principal mines of this district are those of the Mexican Mining Company, and the Triunfo Gold aud Silver Mining Company, each of them owning and working a large number of mines well known by name here, but which it would be useless to specify separately in my letter, as they are merged in the general incorporation of thosc companies. I give the precedencc to the Mexican company, as being the older of the two companies, but not by any menns the richer; at least in my opinion.

The Mexican mine is owned by ten or twelve parties, resident here or on the Mexican side. As far as we are aware none of the stock has ever been offered for sale, the owners deeming it impossiblc to make a better investment of their money. It is about two years and a half since the mines of this company were opened. Sixty or eighty thousand dollars werc expended in putting the mines in proper working condition, under the efficient superintendence of Mr. Florse, although a Mexican, one of the best practical metallurgists in the country. The company have no reduction works or machinery of any kind. The ore is shipped to Freiburg, such of it as yields $100 per ton and upwards; the balance is laid aside for future use, until mills shall bnvo been erected in the neighborhood, or until the company erect works of their own, Wheu the company have a suitable quantity of ore ready for shipment, the Government assayer makes a careful average assay of the pile. Ou the presentation of this certificate, together with the bill of lading, the Mazatlan shippers are always ready to make advances in some cases as high as fifty per cent of the assay, in order to secure return freights and commission. The records of the Mexican company show that for the last year and a half the returns of the Freiburg houses *overrun* the government assays one and a half per cent. on an average! To Califoruians this must seem a somewhat startling fact. It is in a measure explained, when we come to consider that at the German reduction works they save the base as well as the precious metals, and that a careful return is made to the consignor. If anything still remains unexplained, it may be placed to the credit of the superior method aud ability—perhaps even to superior honesty of the Europeans.

The few gentlemen, owners in this great mine, have already divided upwards of three hundred thousand dollars. I am told that this company have recently received large returns from Europe, and that they have now, at La Paz, six to eight hundred tons ready for shipment.

In the immediate vicinity adjoining each other in some cases, are the mines of the Triunfo G. & S. M. Co., of your city. Conceding the mines to be of equal richness, and they are richer beyond a question, the Triunfo mines are still as superior as American skill and energy is superior to the best of Mexican enterprise. Judge McElroy, the superintendent has not his superior as a miner on this coast, and every thing considered, I do not think his equal could be found for the sole management of an enterprise of such magnitude as the works of this company, even in their undeveloped state have already proved to be. No better evidence of this could be adduced than the extraordinary progress of the company's works. The actual permanent opening of these mines was not commenced until the middle of Febuary 1863, less than a year since. During this time the following mines have been opened sufficiently for the extraction of very rich ores. The Carmen, Santa Fe, Valenceina, Mendocena and Esperanza. A splendid tunnel has also been run, and designed to strike a number of the companies mines which run parallel, at, a depth of two or three hundred feet from the surface. The first of these mines, the Carmen has already been reached at a distance of three hundred and thirty feet from the mouth of the tunnel. The tunnel continuing, I should imagine, a hundred, or a hundred and twenty feet beyond, connecting with a shaft from above. Considerable breasting has been done on the Carmen, and some immensely rich ore extracted. At the spot where the vein was cut, I measured seven feet of metal, and if I am any judge, it would he difficult to find anything to surpass it in average richness. The mill and reduction works are admirably located, a gentle grade descending to the spot, from all the mines. The mill was furnished by Messrs. Goddard & Co. of your city, and when completed, will consist of five batteries of five stamps each; as yet only two batteries have been forwarded from San Francisco. At the time of my visit the work was progressing with the greatest rapidity. The batterics were up, as also the engine, line shafting, head pillow blocks, main shaft, etc. I should judge that the engine will be fully completed in about a week. The foundation is laid and all the works put together in the most thorough and substantial manner. The foundation of the furnace is laid, and all the bricks and other material are on the ground. At the site of the mill there is already a pile of ore; I should judge about fifty tons, or more. I was informed that the assays of this pile, made to ascertain its average value, exceeded twelve hundred dollars per ton. If this be so, it is a most extraordinary yield, and from all that I learn I see no reason to doubt it. After a most careful examination of these mines, I am fully satisfied that the Triunfo Company will prove the Gould & Curry of the Peninsula, and every indication goes to prove that in the Triunfo Valley will be located its Virginia City. The Triunfo company I am told are about to purchase, or have purchased two leagues of the chainers portion of the Valley, securing all contesting titles to the same. This will prove most fortunate for the prospects of the Valley, and without a doubt, it will speedily become a place of much importance, as there are numerous mines, as rich probably as any on the Pacific coast, within view from the site of the Triunfo Company's works. At some future time I may give a more extended notice of the mines of this neighborhood but my letter is already probably somewhat too long, so for the present, *adios*.

V.

Mr. S. P. McCarty, the well known and successful canvasser for the *Sonora Flag*, has become connected with the *Daily Evening Journal*, as business agent. McCarty is an active man and has an extensive acquaintance throughout the State.

STOCK REMARKS.

More than the usual amount of business has been transacted in the Stock Boards since our last issue, notwithstanding the joyous influences of the holiday season. Gould & Curry is rapidly tending upward; $5,000 is offered, while holders are scarcely willing to sell at $5,025. The reports of the President and Secretary have been published, from which it appears that the affairs of the company are in a highly prosperous condition. We shall allude to this report, at length, in our next issue.

Ophir, since the refusal of the injunction asked against the Burning Moscow, has declined somewhat and cannot now be quoted at over $1,490. The December dividends have also shared somewhat in the depression. A large number of sales have been made during the past five days, commencing at $40 and gradually declining to $25 on Thursday.

The Lady Bryan is still on the decline, notwithstanding a large number of substantial buyers, of good judgement, are in the market. It opened on Monday at $50, and gradually declined to $38 on Thursday.

Burning Moscow still continues the chief attraction, and has encountered another week of remarkable fluctuation. The refusal of Judge North to grant the injunction asked by the Ophir, gave it an upward tendency at the commencement of the week, which carried it to $190; it has since declined to about its normal condition and may now be quoted at $137½ to $140.

The Desert has declined in sympathy with the Lady Bryan, of which it is an exteusion. It was quoted on Thursday at $12, since which it has not been heard from.

Sierra Nevada, Burnside, Imperial aud Chollar are inactive.

Uncle Sam, Overman and North American continue to attract some attentiou; Blatic is firm at improved rates.

Wide West is enquired for at $47 @ $51, buyer 30 days.

Utah has met with sales at from $21 @ $30.

We refer to our report of sales, and to the bids in the San Francisco Stock Board.

The Henry and Barnard Consolidated Gold, Silver and Copper Mining Co., was organized on the 10th of November, with a capital of $1,940,000. J. M. Blood, President, Geo. W. Gildersleeve, Secretary, and S. P. Taylor, Treasurer. Office, 322 Clay street, in this city. This company is located in the Weaver District, Arazona Territory. One hundred pounds of ore of this company's ledges, the Lord Byron, has just been sent up to this city. The ledge is very rich, shows free copper, and is eight feet thick.

Sacramento Iaon Works.—Parties from the interior will find it a great advantage, in many cases to order their machinery from Sacramento. All such will find Messrs. Goss, Lomhard & Co., of the Sacramento Iron Works abundantly able to fill their orders promptly, and in the most satisfactory manner. They enjoy already a highly prosperous husiness and advertise in the *Press*.

Stocks in Virginia City appear to be "at rest" during the holiday season. We have received no reports since December 28.

The Esmeralda Stock Board has not been in session for some months. We hear it has adjourned *sine die*.

Defered.—An article on the State Library; nine communications from Sonora, Tuolumne County, and several other contributions, which will appear next week.

Bullion.—The weight of bullion shipped by Well, Fargo & Co., from Virginia City during the week ending Dec. 26, was over three and a half tons, or 7,174 lbs., worth $473,205.

Summary of Mining News.

GLEANED FROM VARIOUS SOURCES.

River mining has been protracted to a much later period than usual this season, in consequence of the unusual lack of water in the rivers. The Celestials, to whom river mining is now pretty much given up, have therefore enjoyed "a season of unusual prosperity." The same cause which has been so favorable for the river miner has operated greatly to the disadvantage of the miners in the dry and hill diggings. Even yet there is a great scarcity of water throughout the mines, and in many localities large numbers of miners are still waiting for this much needed element. There appears to be, at the present time, and probably for the above reasons, a great dearth of mining news throughout the State We append such items as have come to hand since our last issue.

El Dorado.—The *Folsom Telegraph* says the copper miners seem to be resting from their labors, in that vicinity, at present; those who expected to find copper on top of the ground and a fortune with it, have been slightly disappointed. The experience of all successful copper mining in this State proves that no permanent bed of ore can be found at a less depth than one hundred feet from the surface, and that whenever a permanent bed of yellow sulphurets is discovered, the miner may conclude that he has really struck it. The principal claims now being worked in that neighborhood, and on which work is prosecuted with vigor, are the claims known as the Hank's Ravine claims, and the claim known as the Jane and Gilbert claim. The shaft in the principal claim in Hank's Ravine is 117 feet in depth, and in it are found beautiful specimens of granulated copper, the pure native metal, and in sufficient quantities to pay for shipment. The Jane and Gilbert company have a vein of yellow sulphurets that they have followed from near the surface, which is gradually increasing in width, and we are informed by old copper miners, that the chances are that this claim will prove rich after sinking a sufficient depth. The gold mining claims in the flat, below town, are paying well; after the great expense incurred in running tunnels, and drains, the owners are reaping a reward for their perseverance and industry. The principal topic of conversation on change, is silver—Reese River, Silver Mountain, Humboldt, and Enterprise stocks. Trading stock is the order of the day, and holders are perfectly certain of having their fortunes secured as soon as the mining season opens. "Feet" are being handled quite freely, and without reserve as to value.

The Boise Mines—Rich Silver Ore.—The Boise *News* says that an assay from the Morning Star quartz ledge shows a yield of $7000 in silver and $2,800 in gold. The silver permeates the entire rock and not in spots and particles as is the case in many ledges, specimens from which assay well, but do not work up to the prospect. A town on Jordan Creek, called Boonville, has recently sprung up; it contains thirteen houses, and covers about all the available building ground there is in the vicinity. Two and a half miles further up is Ruby City, and one mile still further up another town is laid out. The *News* gives encouraging accounts generally of that Mining locality.

Nevada County.—A correspondent of the *Marysville Appeal* writes that the work of prospecting for copper still progresses in the Zinc House district, with flattering results. The Well Company, after drifting from their east wall some 70 feet, have struck the west wall of their lead. This is the widest lead yet found. The Homestead Company, (formerly the Yolala) have struck gray ore at a depth of about 70 feet. The Gray Eagle Company are putting an engine on their works that will keep them dry and enable them to work their shaft to advantage. Work is progressing on the Last Chance, where some fine ore is being found. The Hooker and General Grant have both got good ore, yet not in paying quantities. The Wild Rose Company have struck some ore, and the prospects for that ledge are most favorable. This company intend to work their vein through the Winter, and brilliant results are hoped for. They have a very large vein of soft croppings, and at the depth of 50 feet have obtained very flattering prospects. The Mammoth Company are at work on their leads.

Tuolumne.—A correspondent of the *Sonora Democrat*, writing from Columbia says that times are rather lively in that vicinity, but in a wrong way for the prosperity of the place. Everybody that can leave is packing up and striking out for "tall timber." Some ten or twelve left the other day for the coal mines, in Contra Costa. That's bringing things down to a focus when men have to abandon the gold mines and seek employment in the coal mines. The true cause of this sudden migration is the want of water.

Coast Range Copper Mine.—The editor of the Marysville *Appeal* has conversed with one of the miners of the lately discovered copper mines in the Coast Range, west of Colusa. He says that the miners are prosecuting their labors of prospecting with energy, and have the best indications as to the richness of these mines. Many of the companies have erected machinery for lifting rock and are driving their shafts with vigor. Among those he named, was the Washington company, whose shaft has already been sunk to a depth of 106 feet—and the owners have erected a horse-power whim for lifting rock and water. The Jefferson is also down 68 feet, and about erecting a similar whim for expediting work. The owners of the claims known as the "Frost," "Gnome Cook," and "Franklin," are also pushing their work. The "Frost Ledge" is reputed to have the favorite lead. The miners at work have the greatest confidence in final success.

Reese River.—A letter before us from Reese River, speaks of the ledges at Amador as enormous in size, from ten to twenty feet wide. The writer says "the boys have struck it" on the Peacock rich. They feel confident that it is a good ledge and intend to hold on it. All kinds of business there except building and prospecting is very dull. They have just commenced work on the Nimrod, with good indications of having a valuable vein. The Niagara is down about 12 feet, and has been worked enough to hold it through the winter. It looks well. The Exchange is just being opened. There was a large amount of prospecting going on there at the time of writing, Dec. 16th, more than there was last summer.

Rich Yield.—Dave Crear, says the *Reese River Reveille*, has showed us two small bars which he had obtained from only three pounds of the Florida rock, worked by hand. The bars weighed 8.37 ounces and were worth $10 67—the silver being 996 fine. At this rate the yield of this rock would be $3 55 2-3 to the pound, or $7,110 to the ton.

Rich Rock from Augusta District.—Some rock recently sent in from the "Sister Series" ledges, Augusta district, Reese River, to Mr. Robert N. Graves, Superintendent of the Empire Mill, Gold Hill, went as high as $350 per ton. This district was organized some eight or nine months ago. There has been, as yet, but little work done on the claims, but what has been done has resulted in developments entirely satisfactory to the owners of claims in the district.

Shasta County.—At the Pittsburg Copper Mines, the original Williams & Kellinger Company have commenced shipping ore below. They are also engaged in constructing arrastras to crush some gold-bearing rock, which is found in their claim, and which is known to be very rich. Much stock in this company has changed hands of late, at high figures per foot. The Original Twenty-six Company have decided to incorporate as soon as the articles of incorporation can be signed by the stockholders. This company are going ahead with the work on their claim. The Webster claim is being worked for the purpose of laying the claim over, under the laws of the district, for six months, and in the meantime efforts will be made to incorporate. This claim is know to contain a rich silver lead, not unlike the Williams & Kellinger. The Columbia Company have decided to incorporate, and the owners think they have a good thing of it. The Original Minnesota Company continue to push forward their tunnel, and are not sparing expense in developing their silver lead. Other companies have let contracts for running tunnels and sinking shafts, and much activity prevails throughout these valuable mines.

Siskiyou.—The *Arcata Journal* says that Siskiyou county is deficient in a supply of mining hands, caused by the stampede for new places and the dread of China competition. Miners' wages have increased 25 per cent., and mechanics' wages have increased also.

Plumas.—A company has been formed to cut a tunnel 1,200 feet in length through the hill which separates Indian and Round Valleys, in this county.

Butte.—Placer miners in the vicinity of Cherokee Flat and Morris Ravine are patiently waiting for water to work their claims with. These localities are not supplied by ditches, and the quantity of rain that has fallen during the present season, has not been sufficient to furnish a supply. Many have their claims in working order, and the welcome rattle of the shovel and the sluice fork will resound through the cañons and gullies, as soon as the rains shall furnish them with a sluice head.

Sierra.—The late storm has put an end to river mining, the two forks of the Yuba having swollen to such a degree that the usual pumping appliances were altogether inadequate to keep the water under control. The *Messenger* judges from the "cleaning up" which the Editor saw, that the mines on Rabbit Creek, below La Porte were doing well. There has been some sluice robbing, by Chinamen, at Cox's Bar. A charge of shot from a double-barreled shot gun brought one of the robbers down with a severe wound. He was subsequently provided with suitable apartments in the county jail. The claims at Howland Flat are paying well, but there is a great lack of water. Some of the companies are washing their dirt, the richness of which seems thus far to exceed their most sanguine expectations. But water is scarce, as yet and a few hours at a time has been all the washing done. It will require about ten days, running all the time, to clean out some of the large dumps. Most of the companies are still working short handed, but should there be water to clear the slides, there will be an immediate demand for more men—otherwise, some of those now employed must be discharged. The American company has recently completed a tunnel which cost thirty thousand dollars. The company have a large amount of what is considered the best ground in the county. Fletcher & Rowland's mill, in Sierra Valley, turned out this fall over twelve hundred thousand feet of lumber.

Yuba.—The Marysville *Express*, speaking of the mines in this county, says a silver lode has been struck in Prairie District, some two miles above Brown's Valley. We saw an assay from the croppings, which was $26 46 silver and $12 72 gold. The rock resembles Washoe rock, and the lode is thought to be extensive. The Marysville Company, at Brown's Valley, have struck a very fine ledge of gold-bearing quartz, at the depth of forty feet, which is from three to four feet thick. This company is steadily prosecuting their work, and they feel confident of being richly rewarded for their outlay. The Burnside also struck a fine ledge last week in their shaft. A large number of other companies are prospecting, with fine prospects. The claims which have been opened are paying better as they go down.

Silver Bars.—The Aurora *Times* of Dec. 23d, says: "Last evening we saw on the counter of Wells, Fargo & Co., at this place, five large, handsome silver bars, valued at upwards of $12,000. Four of these bullion lumps were from the Del Monte, and one from the Crockett company. There was also a sixth bar, smaller than the rest, containing considerable gold, and very valuable for its size. These are some of the evidences of the way in which our mines are giving out."

Belcher.—The *Gold Hill News* grows quite jubilant over the manner in which the Belcher has lately been giving out. It remarks: "We saw this morning on the counter of Maynard & Flood's Bank seven large, solid blocks of silver bullion, ready to be shipped to San Francisco. The total value was eighteen thousand dollars. It came from the Belcher mine."

Rich Rock.—Five hundred pounds of rock from the Crittenden Lead, Reese River, worked at Austin, yielded $131 23 in silver, 980 fine.

Drawings.—We have highly talented and efficient Draughts men, by whom drawings of every descriptions are executed in the best style of art, with promptitude and at a moderate cost.

THE MINING INTEREST.

No question can be raised as to the paramount importance of the mining interest to the State of California and the city of San Francisco. It is to the success of this interest, almost exclusively, that this city must look for its future growth and prosperity. Of all the various schemes presented to the capitalist, here, for the employment of his money, there is no one which has a stronger claim upon his attention and careful consideration than mining. This interest has none the less claim upon him because past deceptions and illusions have dashed down hopes and frittered away investments. Let the past teach caution; but let it not debar liberal action. The San Francisco capitalist who shuts the door of his counting room against the miner and his interests, not only commits a grevious wrong against himself, but also proves himself unworthy to be ranked among those who would be foremost in building up a great metropolis on the Pacific coast. There is not a man who owns a foot of real estate in this city, or who is engaged in any occupation, mercantile, professional or mechanical, who is not directly interested in the development of our mines, and who should not contribute something, be it ever so little, toward that object. In heavy investments, the chances of return, should, of course, be carefully calculated; but it should be reckoned the duty of every man who has now and then ten dollars to spare, to throw it out for the above purpose. It may never come back to him in the shape of dividends, but, like bread cast upon the waters of charity, it will most assuredly come back to him at some time and in some way, increased five, ten or an hundred fold. His lands will improve in value for the investment; his trade will increase by reason of the encouragement to labor, which his money has given, or, perchance, out of some ten or twenty investments, it may be, he will be so fortunate as to make *one* successful one, which will return him many times his entire outlay.

Some may call this gambling. Gambling it may be; but it is the *only* manner in which the mineral wealth of any country ever was or *can be* developed. It is no more gambling than is the act of the miner who takes his pick upon his shoulder and goes forth to the mines, working a week here and a week there, and so on, until the tenth or twentieth week, he strikes a valuable claim, and is many times paid for all his unsuccessful efforts. At the gaming table, when *one* wins, others lose to make up his winnings. When one wins in the mining field, nobody loses, but the entire community is benefitted to a greater or less extent by his winning.

In making these remarks we would not wish to be understood as approving of a species of "mining" so called, followed to a large extent upon the pave of Montgomery Street. We endorse legitimate mining only, and legitimate transactions in Stock only. Capital should look toward our mineral deposits, because we have abundant evidence that untold wealth exists there, which needs its aid for development as no other California interest does need it. Capital should be so directed, because there are mines near by us which have already produced the most extravagant returns, and we have every reason to believe that others, equally as rich are yet to be found. It should be so directed because mining is the legitimate and leading pursuit of California and the Pacific Slope, and the great predominating interest which we all believe is destined to be the chief agent in advancing this city, at an early day, to a position of wealth, importance and power, second to no city on the continent. Capital should be directed toward the mines because it is thence that the nation draws its sinews of strength, by which it is enabled to protect that capital. It is our mines of gold and silver, of iron and coal, that has enabled us to assume our present stand as the foremost people on the earth in every essential of national greatness. Let us then carefully foster our mining interest, for therein lies our chief source of power and wealth.

MINING ASSOCIATIONS.

Almost every branch of industry and business in the State, has its association for mutual aid and protection, except the mining interest. Commercial men have their Chambers of Commerce, Merchants have their exchanges, Farmers have their Agricultural Societies, Mechanics their Club Unions, etc.; but the miners, the largest, most important and most numerous class of our population, have no organization for either improvement or protection. The Calaveras *Chronicle*, in view of these facts, very properly suggests that it is time for the mining community to take this matter into serious consideration, and proceed, forthwith, into the organization of County Associations, who should send delegates to a State Council, the officers of which should be empowered to take a general oversight of the mining interests of the State, collect statistics, and, if deemed expedient, memoralize Congress on matters of general interest to the mining community. The idea is a good one. The County Associations would naturally become a medium for the interchange of thoughts and ideas, and the transmission of experiments and practical information from one portion of the State to the other. Whatever might be new in the important and difficult art of mining might be carefully gathered up by the local associations, and, through the State Council, be transmitted abroad and scattered, throughout the mines.

Every instance of the introduction of any new apparatus, every freshly noticed phenomenon, which may have the slightest bearing upon mining, and to which access can be had should be carefully observed and stored as a treasure, for the benefit of all. Our mining districts have been most sadly negligent in accumulating and recording the experience of duly qualified observers. The mining institutes of Europe have accomplished a vast amount of good in this way. Let us profit by their example. We should be "heirs of all ages," and of all nations, too, in becoming acquainted with the experience of the past; but, until progressive steps are observed and recorded, and the gradual acquisitions of practical men in our own midst are brought into regular method and system, we can hardly make good use of the inheritance to which we are the legitimate heirs.

Such an organization, conducted with a proper spirit and energy, would accomplish more, by the publication of the facts it might collect, than would any number of buncombe speeches delivered from the stump, or in our State or national halls of Legislation.

THE KEYSTONE CONCENTRATING WORKS.

We lately had the pleasure of visiting the Keystone Copper Concentrating Works, which have just been erected upon the mine at Copperopolis by the enterprising proprietors, Messrs. Downing Brothers. These works are the first of the kind built upon this Coast—in fact we believe that they are the pioneer works of this Continent—and must reflect great credit upon the enterprising spirit of the builders, as they will produce an entire revolution in the economy of copper mining upon this Coast.

The building is 200 feet long by 35 feet wide. The engine is sixty-five horse power, with 15-inch cylinder and 48-inch stroke, with an auxilliary which materially increases its efficacy. The boiler is twenty-five feet long and six feet in diameter, with return side flues, which give to the boiler about 600 feet of heating surface.

The ore for concentrating is carried from the main shaft to the mill by means of a railway and hoisted to the crusher room over an incline, where it falls into a bopper and passes between two heavy chilled cast iron rollers which are held close by pressure. The ore having passed through the crusher, falls into a revolving screen; all that is sufficiently fine sifts into sluice boxes and the coarser particles are returned by means of a raft wheel to be crushed over again, while the finest particles are carried into the concentrating house, where it goes through the various operations of concentrating by means of jiggers, ties, etc. The jiggers are five in number and are driven by a belt wheel from the engine shaft. The shaft which drives the jiggers is three inches in diameter and ninety feet long, and revolves 180 times per minute. The jiggers are composed of a tank about five feet long by two feet and a half wide, nearly filled with water; inside of these tanks, or boxes, is placed a sieve attached to the cam-shaft above. Into these sieves the ore is shoveled, and, by the quick up and down motion, the slate and other waste matter is lifted to the surface where it is easily scraped off and thrown away and the concentrated ore put into bags for shipping. The finer particles of ore are not placed in the sieves but are carried into sluice boxes where the debris is washed away. Only the second quality or waste ore, together with the finer particles, are treated in this manner and produce ore of about 20 per cent.

The machinery for these works was built by Messrs. Donahue, Booth, & Co., of this city, under the immediate control of Mr. Henry Tregellas, engineer.

Owen's River Salt Mine.—We have received a specimen of salt from a new discovery of this mineral in the Owen's River Valley, about five miles north of Camp Independence, and three miles west of Owen's River. The locality is near the town of San Carlos and may be readily ascertained by examining Ransom's Map of California with the above description. An assay of this salt has been made by Mr. H. G. Hanks of San Carlos, with the following result:—

Chloride of Sodium	79.592
Sulphate of Soda	5.424
Insoluble Matter	2.104
Water	10.200
Loss	2.680
	100.000

It will be seen from the above assay that this is a very pure article of salt. The discovery must soon become very valuable, as, we believe it is the only similar discovery, of any importance yet made in that vicinity. We understand that the discoverers are about incorporating, under the general Act of this State.

Employment of Women in the English Mines.—Miss Emily Faithful recently read a paper before a meeting of the Social Science Congress of England, on "The Useful Employments in which Women are now Engaged." In the course of this paper it was stated that seven thousand women were employed as miners at the Devon and Cornish mines; hundreds as laborers in coke works in Devonshire. With reference to agricultural laborers, it was stated that on the large dairy farms of Cheshire, the medical reports showed that dairy-women constituted a special class of patients, from maladies arising from over-fatigue and insufficient rest. Allusion was made to the numerous employments in which women are engaged, and few, if any, escaped the reprobation of the paper. Fish-hawking, work in cotton-mills, and even in paper-mills, were shown as unfit for women. In some cotton-mills women and girls are obliged to stop their noses with cotton to prevent slow but certain suffocation.

Niagara Eclipsed.—The Denver *News*, of Nov. 28, gives a description of a newly discovered waterfall on the Lewis Fork of the Columbia river, which threatens to eclipse the far famed Niagara. The entire volume of the river pours over a precipice 198 feet high. The Lewis Fork is equal in size to the Niagara River and the fall is 38 feet higher.

Mining in Australia.—A party of Chinamen recently bought a lot of tailings for $75, from which they realized 100 ounces of gold and thirty-seven pounds of quicksilver. It would appear from the above that the miners of Australia do not work their ground very carefully.

NEW INCORPORATIONS.

Companies have filed their certificates of incorporation in the County Court of San Francisco during the past week as follows:—

ASTOR LEDGE AND COMPANY.—Location, Big Creek District, Lander Co., N. T. Capital stock, $320,000, in shares $200 each. Trustees: Benjamin F. Dale, W. M. Chapman, D. C. Booth, A. W. Newby and D. R. Brown.

WASHINGTON, VULCAN AND GRACE DARLING CONSOLIDATED GOLD AND SILVER MINING COMPANY.—Location, Chelon District, Monterey Co., Cal. Capital stock, $342,000, in shares of $200 each. Trustees: R. D. Smith, A. H. Penmoyer, Martin White, W. T. James and M. Grey.

NELSON CONSOLIDATED GOLD AND SILVER MINING COMPANY.—Location, Gold Hill, Storey Co., N. T. Capital stock, $120,000, in shares of $100 each. Trustees: Chas. J. Janson, Chas. J. Nelson, Andrew Lawson, John Peterson and Thos. P. Carroll.

CARRIE ROBINSON GOLD AND SILVER MINING COMPANY.—Location, Mountain Chief Ledge, Reese River, N. T. Capital stock, $80,000, in shares of $100 each. Trustees: Chas. A. Uhrig, O. T. Willey, A. M. Hay, M. L. Boling and M. Thompson.

MART CARROLL GOLD AND SILVER MINING COMPANY.—Location, Mart Carroll Ledge, Reese River, N. T. Capital stock, $100,000, in shares of $100 each; same Trustees.

CONSTITUTIONAL GOLD AND SILVER MINING COMPANY.—Location, Democratic Ledge, Reese River, N. T. Capital stock, $130,000, in shares of $100 each: same Trustees.

MOUNT VERNON TUNNEL COMPANY.—Location, Smoky Valley District, Lander Co., N. T. Capital stock, $300,000, in shares of $100 each. Trustees: J. W. Taylor, E. Hindman and J. W. Carrick.

NEW ENGLAND CONSOLIDATED GOLD, SILVER AND LEAD MINING COMPANY.—Location, Cataline Mining District, Los Angeles Co., Cal. Capital stock, $180,000, in shares of $10 each. Trustees: Jacob Seidelcher, Stephen A. Keene, J. E. Bryant, Isaac Michael and B. Adler.

The Black Ledge Gold and Silver Mining Company filed its certificate of increase of capital stock from $500,000 to $600,000.

PEOPLE'S GOLD AND SILVER MINING COMPANY.—Location, Monitor District, Amador county. Capital stock, $500,000, in shares of $5 each. Trustees: Wm. Hefley, John B. Pilkington, Frank S. Alling, Samuel Newell and Henry A. Reed.

CONSOLIDATED CHAMPION MINING COMPANY.—Location, San Bernar-

dino District, Tulare or Los Angeles county. Capital stock, $300,000 in shares of $100 each. Trustees: L. C. Matthews, John M. Horner, Chas. V. Stuart, Thos. Dorland and Willard Whipple.

Empress Gold and Silver Mining Company.—Location, Gold Hill District, N. T. Capital stock, $520,000, in shares of $200 each. Trustees: R. J. Vandewater, Wm. Thomson, Jr., Geo. Hearst, B. Bellean and John S. Dudley.

Cornucopia Gold and Silver Mining Company.—Location, Lander county, N. T. Capital stock, $200,000, in shares of $100 each. Trustees: Robert Bartusly, R. W. Fishbourne and Henry Bush.

San Fernando Mining and Tunnel Company.—Location, Reese River District, Lander county, N. T. Capital stock, $160,000, in shares of $100 each. Trustees: Wm. Neely Johnson, George Forrest Walter and D. M. Harwood.

Lancaster Gold and Silver Mining Company.—Location, Reese River, Lander county, N. T. Capital stock, $80,000, in shares of $100 each. Trustees: J. R. Linton, Joseph Healy and Wm. Stanwood.

Walipi Gold and Silver Mining Company.—Location, San Francisco District, Arizona Territory. Capital stock, $240,000, in shares of $200 each. Trustees: E. S. Mason, C. H. Doriot and Cyrus Holloway.

North Star Mining Company.—Location, Santa Catalina District, Los Angles county, Cal. Capital stock, $380,000, in shares of $100 each. Trustees: J. B. Knapp, Isaac M. Merrill, H. Bush, William J. Woodley and Thomas Stackpole.

Rose Matilda Mining Company.—Location, capital stock and Trustees, same as above.

Charter Oak Mining Company—Location and Trustees same as above. Capital stock, $260,000, in shares of $100 each.

Diamond Mining Company.—Location and Trustees same as above. Capital stock, $240,000, in shares of $100 each.

Legal Tender Silver Mining Company.—Location, Amador District, Lander county, N. T. Capital stock. $700,000, in shares of $500 each. Trustees: W. J. Smith, A. J. Tobias, F. R. Nicholson, S. H. Towns, W. C. Gray.

NEW PUBLICATIONS.

The American Exchange and Review—Whiting & Co. Publishers, Philadelphia.

This Exchange and Review is a massive publication, devoted to useful knowledge and general literature. It is a work of much practical ability, embracing in its table of contents treatises of mining, manufactures, patents, trade, commerce, social and economical science, etc. "Utility, Profit and Progress" is its motto.

Silliman's Journal of Art and Science—New Haven, Conn.

We have received the November number of this standard publication. Its table of contents is varied and interesting, embracing a wide range of topics of interest and importance to the scientific world. This journal is published in numbers of 152 pages, every other month, forming two volumes per annum of 450 pages each. Terms—$5 per annum, in advance.

Our New Agate Type was purchased of Messrs. Faulkner & Son, agents of James Connor & Sons, New York. We have had the pleasure of donning a "new dress" of their type several times during the past twelve years. We desire no more liberal men in trade than Messrs. Faulkner & Son, and our readers will ask for no more handsomer type to read than that presented in to-day's issue.

Special Notices.

The Publication of Mining Notices in the Mining & Scientific Press obtains for them a more general circulation, among parties directly interested, (in this city and throughout the mining districts of the coast, than can be secured through any other medium. State laws require their publication but once a week, and Secretaries and Trustees can make a material saving of costs to stockholders by ordering their advertisements inserted in the journal most properly entitled to receive their patronage—the weekly Mining and Scientific Press.

Information Furnished.—Miners, Mechanics and others desiring information upon any subject relating to inventions and discoveries, or the principles of mining, mechanism, chemistry or natural sciences, by addressing us will receive answers to their enquiries, either through the columns of the Press—or by private letter, in accordance with the best judgment and information we can obtain.

In Justice to Readers, a limited space only will be allowed for advertising, in the Press. Patrons who find their advertisements contracted in length, will please bear this in mind, and also the fact that our advertisng type is small and our columns unusually wide.

San Francisco Mechanics' Institute.—Organized March 29th, 1855. Regular meetings on the first Friday evening of each month. Building of the Association, south side of California Street, between Montgomery and Kearny. Library and Reading Room open from 8 A. M. to 10 P. M. President, Joseph Britton; Secretary and Librarian, P. B. Dexter.

Mercantile Library Association.—Rooms Northeast Corner of Bush and Montgomery Streets. Library open every day throughout the year from 9 A. M. to 10 P. M., excepting Sundays and legal holidays. Reading and Chess rooms open from 8 A. M. to 11 P. M. President, Jacob Unkenhill; Librarian, H. H. Moore.

California State Library.—Rooms corner of J and Second streets, Sacramento. Hours from 9 A. M. to 10 P. M., during the session of the Legislature, and from 9 A. M. to 4 P. M. at other times. Free to all. W. Straton, State Librarian.

German Society of Natural Sciences.—Meetings held every Wednesday evening, at their Rooms 517 Clay Street. President, Dr. J. N. Eckel; Secretary, J. A. Bauer; Librarian, A. E. Koels.

Academy of Natural Sciences.—Rooms 622, Clay Street. President, Leander Ransom; Corresponding Secretary, W. O. Ayres.

San Francisco Stock and Exchange Board.—Rooms, Brokers' Block, Montgomery street. President, J. B. E. Cavalier; Secretary, Franklin Lawton.

San Francisco Board of Brokers.—Rooms 430 Montgomery Street. President, Samuel Purdy; Secretary, M. G. Elmore.

Pacific Board of Brokers.—Rooms on the corner of Washington and Montgomery Streets, San Francisco. President, W. P. Deneckla; Secretary, J. H. Gager.

ENLARGEMENT
—AND—
Important Improvement
—OF THE—
MINING AND SCIENTIFIC PRESS.

Enlarged from Eight to Sixteen Pages at the Commencement of Volume VII, January 1st, 1864.

Two Volumes (of 416 Pages Each) per Annum.

PUBLISHED EVERY SATURDAY.

SUBSCRIPTION TERMS IN ADVANCE:

One Volume, six months,.....$3.00
Two Volumes, one year,.....5.00
Five Copies, one year,.....20.00

The present proprietors of this journal announce with confidence their determination to render to the friends of Science, Mining and Mechanical Industry a newspaper published upon this coast worthy of their patronage at home and their pride abroad. We shall seek favors only through our endeavors to merit them.

The Editorial Department

Will be conducted with ability, in a liberal and reliable manner sparing not in expense, veneration for honesty, or respect for common sense.

Competent Correspondents

Will be employed to furnish us full and reliable information concerning newly-discovered mines; and through vigilant efforts we shall secure for our readers the latest intelligence from all important mining localities. In our list of

Occasional Contributors

We have the privilege of numbering gentlemen ranking among the most talented and experienced writers who manifest a prominent interest in the progress of Art and Science upon this coast, including the names of

Prof. J. D. Whitney, Dr. S. M. Logan, Dr. J. A. Veatch, Rev. O. C. Wheeler, M. Atwood, J. H. Churchill, A. M., A. B. Paul, H. S. Brooks, W. Wansworth, T. Price.

Illustrative Drawings and Engravings

Superior in finish and useful and attractive in character, will be published from time to time, representing the most important new inventions and improvements in the art and science of

Mining and Mechanism

Developed upon this Coast. Each number of the paper will contain full and correct reports of

Sales by the Stock Boards of San Francisco.
Sales by the Stock Board of Virginia City.
Sales by the Stock Board of Esmeralda.
Sales by all Mining Stock Boards.
Reports of Bids and Sales in San Francisco.
Reports of Bids and Sales in the Territory.
A Weekly Review of the Stock Markets.
A Weekly Review of General Mining Interests.
General Summary of California Mining News.
General Summary of Mining everywhere.

Valuable Information for all Miners.
Indispensable Knowledge for practical workmen,
Practical Suggestions for intelligent artizans.

Valuable Facts and Statistics

Essential to members of all trades and professions; the best approved methods of mining; the latest discoveries and inventions in mining operations; practical, scientific views upon geological and mineralological questions; the proper methods of reducing ores and saving the precious metals. In fact every sentence calculated to lessen the number of hard blows uselessly rendered by miners and working men, and add wealth by intelligent saving of material or labor, will find welcome space in our columns. The paper will afford many

Practical Hints

With regard to the manner of working and securing mines, derived from the actual experience of parties in our own and other countries. Also hints concerning the location and possession of mining grounds; the laws peculiar to different districts and countries; and notices of all important decisions of the law in mining cases. As a

Book of Reference

The bound volumes of the Press will find no rival in value to the intelligent and industrious citizens of the Pacific Coast, who cannot but feel a source of pride in the history of the inventions, discoveries and prosperous developments of the remarkable era through which we are now passing.

The Stock Record

As presented in our columns will be found correct, distinct and most convenient for preservation and future reference.

For Sending Abroad.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and Newsdealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the Press can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

DEWEY & CO., Publishers.

Office in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

C. W. M. Smith.....W. B. Ewer.....A. T. Dewey.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

The Old and New Volume.

To perfect the desired improvements in our new series of the Mining and Scientific Press, it becomes necessary to commence a new volume with the year, and we are therefore obliged to close up Vol. VII with the present issue. By enlarging the paper, we have 832 pages per annum, instead of 416, as formerly, and for convenience in binding we reduce the term of our volume to six months, the customary period for such publications. No. 1 of the 1st volume of the Press was issued by G. H. Winslow & Co., May, 24th 1860. Although the individual length of the intervening volumes has been somewhat irregular, the average period for each figures not far from six months, and rating the seven volumes thus proves very nearly the actual age of the paper. Our receipts, recently given for subscriptions, have been dated by volumes and Nos. To prevent misapprehension on the part of subscribers, we will state that the change of volume alluded to, makes no difference in the *time* of the expiration of their subscriptions. In future there will be but 26 Nos. in each volume. There being but nine numbers issued in Vol. VII, (instead of 52, as contemplated,) those holding receipts to any No. beyond No. 9, of Vol. VII, will receive credit on Vols. VIII, IX, or X, to such date as the No. to which their receipt shows payment would have been issued if no change had been made. For instance, a subscriber holding a receipt given December 1st, 1863, running from No. 5 of Vol. VII to No. 5 of Vol. VIII, will be duly credited, by the new order of volumes, to No. 12 of Vol. IX, which will be published during the last week in November, 1864, at which time he will have received 4 Nos. printed in Vol. VII, (from No. 5 to 9,) the 26 Nos. contained in Vol. VIII, and 22 Nos. of Vol. IX—making in all 52 copies.

PALMER, HANSCOM & CO.,
GOLDEN STATE IRON WORKS,

No. 19, First Street, San Francisco,

Furnish Castings and Machinery of all kinds,

Also Genuine White Iron Shoes and Dies.

PALMER, HANSCOM & CO.

To Quartz Miners.

KNOX'S IMPROVED AMALGAMATING PAN
WITH PALMER'S PATENT STEAM CHEST.

THE ABOVE COMBINATION SECURES THE MOST COMPLETE amalgamation of the precious metals of any process now known. By it steam is introduced in the most effective and economical manner, while it is peculiarly adapted to the catching of floating gold and silver, known to be otherwise lost. Made exclusively by PALMER, HANSCOM & CO.,
(Golden State Iron Works,
Nos. 19 and 21 First Street, San Francisco.

The public are informed that Letters Patent have been granted the undersigned upon Steam Chest False Bottoms for the inside of Amalgamating Pans or Tubs, and are cautioned against making, buying, using or selling the same without his consent.
tf W. A. PALMER.

Richn, Hemme & Co.,
ASSAYERS.

☞ Assays made of Ores, Minerals and Metals.☜

CHAS. F. RIEHN, late U. S. Branch Mint, gives lessons in Assaying, also in Mineralogy and Chemistry, as far as required to become a practical Assayer.

PUMPS! PUMPS!

HARRISON'S
California Lift and Force Pump,
WITHOUT VALVES OR PACKING,

Suitable for Mines, Fire Engines, Wrecking or Irrigating. This is the Cheapest, Lightest and most Durable, and least liable to get out of order of any Pump yet invented.

ALL SIZES.

Capable of throwing from ONE HUNDRED to FIVE THOUSAND Gallons per minute. For sale by
C. H. HARRISON, Phœnix Oil Works,
jel5-tf 517 Front Street, San Francisco.

CROCKER'S
STOCK and ASSESSMENT LEDGER.

Copyright secured.—Price $10.

The necessity of a proper book for keeping the Stock and Assessment accounts of Corporations has long been very much needed. One that would combine economy and simplicity, and would not require the services of an experienced book-keeper to keep the accounts correctly. CROCKER'S STOCK AND ASSESSMENT LEDGER has met this requirement; we have submitted it to several Secretaries of corporations, and they acknowledge that the plan is admirable, and just what has long been wanted. The printed headings are a perfect explanation of the manner of keeping it; and any person, whether they understand book-keeping or not, cannot make an error in the accounts. The Stock and Assessment accounts are so arranged that the Secretary can in a moment tell how any stockholder's account stands, both in regard to Stock and Assessments. He can also, with the greatest case, trace any certificate, through any number of transfers, to the original one issued. It saves a great amount of labor, as it does not require one-fourth the writing of the ordinary method. It dispenses entirely with the old style of Stock Ledger, Stock Journal and Assessment Book, all three of which Secretaries have heretofore been obliged to keep, condensing the whole in one book. To a person who is Secretary of several companies, this book will prove invaluable, and we feel no hesitation in guaranteeing satisfaction to those who may order them. Specimen sheets sent to those who desire to examine it. The books are ruled with one or two accounts to the page. State which is preferred.

Published and for sale, wholesale and retail, by
H. S. CROCKER, & CO.,
Book and Job Printers, Sacramento.

Certificates and complete sets of books for Corporations, in the finest style, at short notice, and low rates. 7-1m

G. E. MORE,
Assayer and Analytical Chemist,

Having established a Chemical Laboratory, furnished with every requisite for delicate Analytical work, is prepared to execute the Assay and Analysis of Ores, Mineral Waters, Guanos, etc., with accuracy and dispatch. No. 612 Sacramento Street.
References:—Prof. J. D. Whitney, State Geologist, San Francisco; Alsop & Co., San Francisco; Sather & Church, San Francisco; John Parrott, San Francisco; D. O. Mills, Sacramento. tf

Patent Office Department.

Recent American Patents.

[Under the above head we shall give a weekly list of all such patents issued, as may be of any special interest; particularly to Californians. All patents, of whatever nature, issued to residents of the Pacific Coast will be included in the list.]

The following are some of the most important inventions and improvements for which Letters Patent have been recently issued from the United States Patent Office:—

LATE CALIFORNIA INVENTIONS.

FIRE-PROOF PAINT.—G. W. Powell, of Chinese Camp, Cal., has secured Letters Patent for a Compound for making Fire Proof Paint.

IMPROVED AMALGAMATOR.—This invention consists of an improvement in that class of Amalgamators in which the finely pulverized ore is intimately mixed with the mercury by the action of a rotary muller in a suitable pan. The invention consists in imparting to the mullers, which are attached to the arms extending from a common central arbor, a compound rotary, or a sun and planet motion, by the action of a central stationary-toothed rim on pinions secured to the axles of the mullers in such a manner that by the rapid rotary motion of each muller around its individual axis, that portion of the ore which may be exposed to the action of said muller, is brought into intimate contact with the mercury, and by the common rotary motion of the several mullers around the central arbors, the entire contents of the pan are successively and repeatedly exposed to the action of each muller. The invention contains a set screw on one side and a hinge on the opposite side of the pan, by which its inclination can be adjusted at pleasure. Thomas Hansbrow, of Sacramento, Cal., is the inventor.

BOMB LANCE.—An improved bomb lance, having the perforated fire proof, or non-combustible diaphragm, and a wooden or combustible fuse plug placed within it, and arranged and combined with the fuse and the guard chamber thereof, substantially as described in the application. Oliver Allen, of San Francisco, Cal., inventor.

MACHINE FOR GRINDING ORES AND AMALGAMATING THE METALS.—The object of this invention is to obtain a device by which gold and silver ore, reduced to a pulp in a stamp mill, may be further reduced, and the metal it contains thouroughly amalgamated. We are unable, without drawings, to give any intelligible description of this invention. John O. Randall, Canon City, Colorado Territory, is the inventor.

MISCELLANEOUS PATENTS.

LOOP CHECK FOR SEWING MACHINES.—The object of this invention is to obtain a loop check which will answer equally well for all kinds of work, and which can be applied, at small expense, to any machine now in use. It consists in a check composed of a tooth of steel, or other metal, attached to the bobbin ring, in such position that its point is almost directly in line with the needle's motion, and arranged in such a manner as to allow the loop to pass off in a backward direction. J. B. Seer, of Chicago, is the inventor.

NEWSPAPER FILE.—This invention consists in making one or both of the rods largest in the middle, and tapering gradually toward one or both ends, so that when they are clasped together at the ends, they act as springs on the paper between them. J. H. Atrooler, Providence, is the inventor.

TRAVELING INVALID CHAIR, an improvement on similar conveniences. The chair may be readily placed at any inclination or extension desired. The chair may be entirely propelled and guided by an arrangement of driving wheels. Charles L. Bander, Cleveland, Ohio.

AN INVALID BEDSTEAD is enumerated among patents issued for week ending Oct. 27. A decided improvement is claimed for this invention over any heretofore made, in auxiliary head and foot boards, the mode of making and applying the sacking, and operating the bedstead, generally, and in the particular combination of the tipping hooks, their mechanical equivalents. Moses Johnson, Colebrook, N. H.

SHIRT BOSOM.—J. A. Pease, of New York city, claims the invention of a shirt bosom, of water proof enamel, which may be easily kept in place by springs, etc. An invention disastrous to the business of a large number of the "celestial" residents of this and other California cities.

WATER WHEEL.—This invention consists in a novel manner of applying the water to the wheel, whereby the the water is made to strike each and every bucket in a solid, unbroken sheet or column over the entire circumference of the wheel and to act with nearly equal force whether the gate be wholly or partially open.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent, And if the final fee for such patent be not paid within the said six months, the patent shall be witheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entities the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary It should be sufficiently perfect, however, to show, with clearness the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months	$10 00
On every application for a design, for seven years	15 00
On every application for a design, for fourteen years	30 00
On every caveat	10 00
On every application for a patent	15 00
On issuing each original patent	20 00
On filing a disclaimer	10 00
On every application for a re-issue	30 00
On every additional patent granted on a re-issue	30 00
On every application for an extension	50 00
On the grant of every extension	50 00
On appeal to the Commissioner from Examiners-in-chief	20 00
On every appeal to the Judges of Circuit Court, D. C.	25 00

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal, and the decisions of the Commissioner are not unfrequently reversed. We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Patent Claims.—We will furnish, on application, the claim of any invention that has been patented within the last fourteen years. The name of the patentee, date of patent, when known, and two dollars for copying, should be sent.

Back Numbers.—We have a limited number of past volumes of the PRESS on hand, which will be sold, neatly bound, at reasonable rates. A portion of the back numbers of the paper can be had by the single copy.

HATTERS,

Montgomery St., corner of Commercial,

SAN FRANCISCO.

TO OUR FRIENDS AND THE PUBLIC GENERALLY:—HAVING purchased the entire interest of Messrs. Fishers & Co., in this city, we shall, on the 1st. day of May assume the management of the

HAT EMPORIUM

so long conducted by that firm..

MR. WILLIAM H. MEAD, for the last seven years salesman with Messrs Fisher & Co., respectfully solicits a continuance of the patronage so long and liberally bestowed upon the old House, feeling entire confidence in our ability to suit in every particular.

MR. THEODORE VAN TASSELL, for eight years with Messrs Le Gay & Co., would be pleased to see his friends at his new place of business.

The long practical experience of Messrs. Mead & Van Tassel in the Trade justifies them in saying that their work cannot be excelled either in finish or durability. Having perfected arrangements, we shall be in constant receipt, by every steamer, of soft goods of the very finest of FRENCH AND AMERICAN MANUFACTURE. Our Stock on hand is superb.

Call and examine, and judge of the merits of our claim to the title of "LEADERS OF FASHION."

Respectfully, MEAD & VAN TASSELL.
no2-tf Montgomery street, cor. Commercial.

WHEELER'S

Amalgamating and Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metals arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the trituration this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals over the competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation, at the Miners' Foundry, on First street in this city, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MAGHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

COPPER ORES—Highest market rates advanced in cash, for Shipments. S. C. BRADSHAW, Agent,

509 Sacramento street, near Sansome.

HEPBURN & PETERSON'S.
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machines now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

SAN FRANCISCO.

EVERY DESCRIPTION OF IRON AND BRASS MACHINERY, of the Best and Most Economical, manufactured in the State of California, will be furnished with Dispatch at the Miners' Foundry and Machine Works, as:

Steam Engines and Boilers, Flour, Saw and Quartz mill machinery, Mining Pumps, Amalgamators, Retorts, Etc., Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections, designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

*** Parties desiring to test their ores practically, in small quantities will be afforded ample facilities, free of cost.

All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.

HOWLAND, ANGEL & KINO.
San Francisco, February 23, 1863. tf.

50 lbs. MARINE AND
FIRE-PROOF PAINT,

MANUFACTURED BY THE PACIFIC METALLURGICAL Works in the city, for Hulls and Decks of Vessels, from ground Mineral Rock, containing Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper; no worms will ever effect it, and it is cheaper than any other paint.

DIRECTIONS.—For Deck of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed oil.

For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint; mix with Coal Tar and apply it hot.

For sale by all Ship Chandlers and tradesmen, in boxes of fifty pounds each, or by the Pacific Metallurgical Works.

25 lbs. FIRE-PROOF PAINT.

When used on Roofs, Buildings, or Fences it is equal to covering them with a coat of Stone, being perfectly Fire-Proof, and costing less than any paint.

DIRECTIONS.—House—Mix three parts Mineral paint with one part white lead; mix with Linseed oil. If a lighter color is wanted, mix less paint, more lead.

Roof.—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a Tin Roof, as one coat when properly applied will last three years.

S. C. BRADSHAW, AGT.
G. T. FOUQUE, Superintendent.
WORKS, North Beach; Office, 509 Sacramento St., San Francisco. tf.

THE RAILROAD HOUSE.

Nos. 318 & 320 Commercial and Clay Sts,

P. M., for the election of officers and the transaction of such other business as may come before it. (1-1m) B. W. MUDGE, Sec'y.

Puritan Gold and Silver Mining Company, (Devil's Gate District, N. T.)—Notice is hereby given that the Trustees of the Puritan Gold and Silver Mining Company have this day levied an assessment of one dollar on each and every share of the capital stock of said company; said assessment payable immediately in gold coin to the Secretary, at the office of the company, No. 623, Washington street. H. B. CONGDON, Secretary.

December 26, 1863. 1-m

Bullion Gold and Silver Mining Company, Van Horn District.—Notice is hereby given that a meeting of the stockholders of the above named company will be held at the office of the Secretary, at 7 o'clock on MONDAY EVENING, the 25th day of January next, for the election of officers, and the transaction of other legal business. By order of the President,

San Francisco, Dec. 19, 1863. (2-m) T. L. BIBBINS, Sec'y.

Our Correspondence.—We would call the attention of our readers to the letters and communications which appear in our columns this week. The letter of Dr. Logan will be found of especial interest to antiquarians; "J. D. W." gives an interesting account of the various mining publications throughout the world; "J. C." sends us the first number of a series which will be found interesting and important to prospectors; "Bullion" furnishes a very important suggestion with regard to taxing the mines; our Copperopolis correspondent continues his series in the present issue; Silver Mountain, Mariposa, and other interests are duly represented by correspondence in our columns to-day.

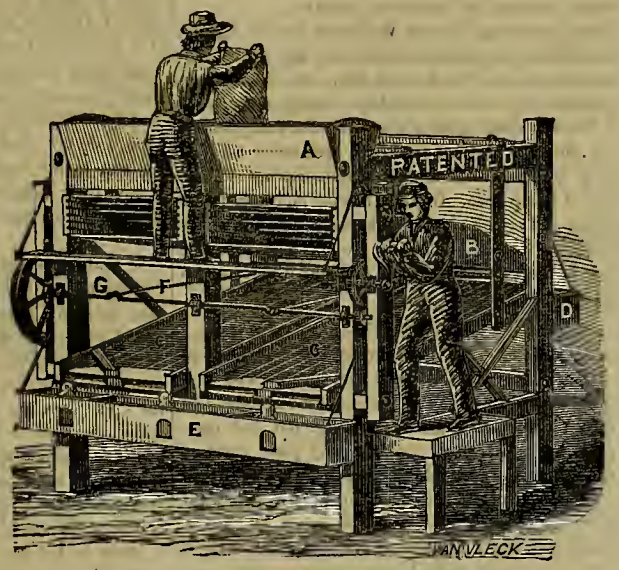
HUNTER'S GRAIN SEPARATOR.

Hunter's grain Separator is a new invention, and the only practical working machine for farmers use, possessing all the different combinations for separating the various kinds of grain, such as barley, oats, chess, mustard, turnip, cockle and all broken and imperfect grains from wheat—thus rendering the wheat clean and perfect for seed or shipping purposes. The advantages derived from recleaning wheat are manifold:—First, at least ten per cent is saved in the purchase of sacks, for sacks hold ten per cent more wheat after it is cleaned and the refuse thrown aside; Second, the waste taken out, such as barley, oats and broken wheat, is worth as much as any other grain for feed purposes; Third, the advantages of sowing clean seed are inestimable for the farming interest generally, as the soil is thereby kept in a clean condition and prevented, oftentimes, from going to waste. The shipper is willing and able to pay a higher price for re-cleaned grain, than for that which has not been subjected to such a process; moreover the credit of the State will thereby be redeemed in foreign markets; for it should be borne in mind that California has suffered very much abroad from the imperfect manner in which her wheat has generally been shipped.



HUNTER'S PATENT GRAIN SEPARATOR.

The capacity of this machine is equal to the cleaning of from 400 to 500 sacks per day, turned by one man. The simplicity of the machine renders it next to impossible for it to get out of repair, and is such that any ordinary farm hand can take charge of the cleaning. The machine can be readily attached to a thresher, elevating the grain from one machine to the other, or set along side and turned by hand. Extra plates and screens can be used for oats and barley, rendering the barley fit for brewer's use, by taking out the imperfect and broken grains. All kinds of grain or seeds from the smallest to the largest can be cleaned by using plates to suit the size of the grain.

The machine has been fully tested to the satisfaction of numerous practical men who have unhesitatingly accorded to it, all the advantages, claimed for it by its inventor. The machine as it appears in our illustration, has been recently improved, so that by it the separation of barley and oats is made as perfect as it can be done by machinery. The construction of the machine is plain and simple. The hopper A is for receiving the grain; it has a slide in the bottom by which the quantity of feed is regulated, with a spreader underneath for spreading the grain evenly on the plates. The shutes B are each two feet wide and eight feet long, having six perforated zinc plates, in each shute—the wheat passing through the plates, the barley and oats passing over and being deposited in box D; the wheat passes through the openings in the bottoms of the shutes B and returning over the chess schreens of shutes C, of same width and length with the upper shutes B, separating all seeds smaller than wheat, depositing the screenings in each end of box E, and dropping the wheat in the centre. The machinery employed is gear and pinion fly-wheel, main driving shaft G, with reversed cranks, and driving rods F giving a vertical and reversed motion to the shutes.

Any sized machine can be manufactured, suiting the smallest or largest farmer; or for warehouses or exporters for cleaning any amount of wheat per day.

LETTER FROM SONORA.—A correspondent, writing from Sonora, under date of Dec. 31, 1863, speaks in highly favorable terms of the benefits to the copper interests, in that and adjoining counties, which have accrued from the letters of our "Traveling Correspondent." We tender our thanks for the good opinion of "COPPER," who also sends us his real name, but our natural modesty will hardly allow us to give his letter to the public. We merely subjoin the following extract: "I have so much faith in the copper mines of this county, based upon the intelligent reasoning of your correspondent, that I can predict for your paper a large circulation. We can but regard your enterprise as a direct and positive benefit to the whole country."

"A LITTLE LEARNING" NOT "A DANGEROUS THING."

In speaking of science, we are quite too apt to associate with the term a kind of exclusiveness—a sort of an undefined something which is not to be found in the workshop, on the farm, at the mine, or in any of the common walks or occupations of life. By a species of arbitrary custom, science has been chiefly confined to the laboratory, to the library of the professional student or to the higher classes in our collegiate institutions. All this is but a remnant of the exclusiveness of the early and middle ages, when learning was confined to the few and excluded from the many. It has been the great work of the last century to throw off this incubus and to make education universal. The result of this effort has been to effect a complete revolution in the social condition of all christendom; a revolution which has made itself apparent in the prodigious stride which the present and preceeding generation has taken in material progress. There is still remaining, however, quite too much of what may be termed "old fogyism" with regard to science. But the continuance of this condition of things, is owing chiefly to the people themselves, who refuse to accept the precious boon of learning when it is brought to their very doors. A greater fallacy was never uttered than that contained in the oft quoted couplet, beginning with "a little learning is a dangerous thing." A little learning is *not* a dangerous thing at all. It should be the aim of every one to secure all the learning that his or her time and means can command.

The term "science" is too apt to be made a bugbear, conjured up by people, by which they are deterred from attempting to inform themselves beyond the mere rudiments of education. Science, they think, must be left, as already hinted, to the laboratory or study—a thing not to be meddled with by the mechanic or miner. This is all wrong. There is science in everything. There is science in mechanism, there is science in the simplest processes of mining, there is science in every workshop and in every field—nay in almost every act which we perform. There is science in purchasing a horse, in making a shoe or in sinking a shaft. There is science in almost every transaction between neighbor and neighbor. When, by long observation and experiment any one has collected and arranged a mass of facts he has been adding to science. Science is a mass of facts, methodically arranged—nothing more. We are dealing in science every day. Whenever a man obtains a new idea or an additional fact with regard to his business he has acquired so much practical science, every item of which will be of value to him. He may drink as deep as he pleases of the pierian spring, but let him never despise or fear even a *little* learning.

THE LAIRD IRONCLADS, constructed orignally for the Rebels, have been appraised to the British Government, the one at $550,000, and the other at a little over $400,000.

Correspondance.

[Written for the Mining and Scientific Press.]

Crimea House---Copper Mines.

BY OUR TRAVELING CORRESPONDENT.

Mr. Editor :—In finishing an examination of the Knight's Ferry Mines, I proceeded up to the Crimea House, nine miles above on the Sonora road, and some three miles below Chinese Camp. It is the centre of a very important copper section, and during my stay in the neighborhood I made it my headquarters. It is an excellent and well conducted and comfortable hotel. Mr. Brown, the proprietor, is largely interested in copper, and thoroughly endorsed your system of a periodical report of the Copper mines, as the only plan of placing them in a proper position before the public. Indeed, he regarded it so much of a public necessity, that he insisted upon my being his guest during my stay, and supplied me also with a horse. My warmest acknowledgements are due to the family, for their polite attentions.

The mines in the neighborhood of the Crimea House, and thence in a straight line nine miles to the Tuolumne river, and beyond to the Solambo, the only one shipping ore in the district are unquestionably upon the Keystone and Union system. Some doubt this as a matter of fact. I do not. I examined the country from point to point, so as to get the relative positions correctly, and afterwards with the compass, and found everything confirmed the opinion. Besides the Gopher district lies from Copperopolis north of the Stanislaus, the same distance exactly that the Knights' Ferry mines do from the Crimea House south of that river; while it is very apparent where the Massachusetts Hill system intersects the two. No one doubts the Napoleon system goes above Knights' Ferry. For the same reason none *ought* to doubt the Copperopolis system goes to the Crimea House. Were, further evidence needed, it could be found in the same number of veins, their character, position towards each other, and the general similarity in the formation of the valley down to the Tuolumne. If those interested in locating the Copperopolis system *south* of the Stanislaus will examine all of these points as closely as I have done, I think they will agree that the Crimea House and Don Pedro's Bar form the lucky line.

The first mine I visited, a few yards from the Crimea, is the

FLORA.

It contains 4200 ft. divided into 28 shares. Main shaft 20ft. It opens well on gossan, with slight sulphurets below. Work has been suspended until Spring. On the opposite side of the road upon the same vein is the

WINDSOR.

It contains 1800 feet divided into 12 shares. Main shaft eighty feet deep. The croppings here are very handsome, and the vein opens well, but beyond general indications of ultimate success nothing developed. Work suspended. Two miles and a half south east of the above, towards the Tuolumne, on the same vein is the

LALLA ROOKH.

It contains 2100 feet divided into fourteen shares. Two main shafts, respectively fifty five and one hundred feet. This is the pioneer claim of the district, the honor of which belongs to Mr. Jesse Cole. I consider this a first class claim, and think it a pity so little judgment has been shown in its management. This fatal and foolish impatience to strike copper sooner than nature allows is ruinous. It is very conspicuous here. In the fifty-five foot shaft, the first put down, they have everything desirable to show a healthy, large vein, which only required depth to give good ore; yet they quit that, and sink another in a badly chosen place one hundred feet deep from which they are now drifting, or going to drift for the vein. Half the labor expended on the latter, put upon the first, in my opinion would have given plenty of good ore. Work to be resumed immediately. Near the Rookh, on the same vein is the

PADDY ADAMS & JERSEY (CONSOLIDATED.)

It contains 1800 feet divided into twelve shares. Main shaft twenty feet. In its general features, this claim strongly resembles its more advanced neighbors, presenting altogether very favorable indications. Work has suspended until May next. Continuing still south towards the Tuolumne, another mile, we reached the great claim of the section, the

COPPER MOUNTAIN.

It contains 3000 feet divided into single foot shares Main shaft seventy feet, which being too far west is now abandoned for a tunnel. This is already run two hundred and forty five feet, and cannot have more than 30 or 40 feet more to go before cutting the vein. It is exceedingly well worked, a portion of it through hard granite. The rock is pure, and shows itself strongly impregnated with sulphurets of iron, mundic, and yellow sulphurets of copper. This claim is held in high estimation by all parties here, and justly so. The croppings on this hill are remarkably handsome, while the hill itself is well located for shipping ore to Stockton. The present tunnel will strike the vein two hundred and fifty feet below the surface, and if necessary at a future period another can be run below to cut it at five hundred feet. Taking all things into consideration, there seems little danger in predicting this claim the future "Union" of Tuolumne County.

Our party, consisting of Mr. Brown and Dr. Clarke, finished our inspection at this point, and I then proceeded alone to Don Pedro's Bar. Mr. B. has made himself very conversant with the country hereabouts. I found the four veins of Copperopolis Valley, carrying the same position exactly to each other here as they do there, in the middle of Salt Spring Valley, and at Camp Seco. On the following morning, Judge Niles and myself started on horseback to the mines lying south of the Tuolumne river. The first one east of the Coulterville road probably a mile, as you go over the bridge, is the

DON PEDRO.

It contains 7200 feet divided into single foot shares. Main shaft, twenty feet deep. The first portion of this was through a very hard granite. Of course it has been expensive sinking, but the prospects are good. The rock is very pure, carrying strong mundic and yellow sulphurets. The ledge-rock on the surface shows a vein thirty feet wide. This vein runs east of Copper Mountain, and corresponds with the Inimitable at Copperopolis. I think twenty feet more ought to bring them to blue slate, and then the vein will soon develop itself. It is very strong at this point. The claim is under the direction of our old friend Mr. Calberston of Stockton, who is largely interested in copper. He told me he should certainly subscribe to the "Press" when he went below at Christmas; and he is right; for the only way now-a-days, to stand the press of mining, is to take the "Mining Press." Adjoining the Pedro, is the Twenty-one, but as it is in dispute, I did not ascertain particulars, and continued on to the

SOLAMBO.

It contains 3000 feet divided into 3000 shares. Main shaft sixty feet deep, showing a vein from four to six feet. This claim, as I have already observed, is the only one in the district which has shipped ore. I understand some fifteen tons of No. 1 ore have been sent below, and I should judge about the same quantity of No. 2 to be left at the mine. The ore I saw was of an inferior quality, though good for that depth. This shaft is also too far west; and work is suspended, till the company decides whether they will put a new shaft down in the *proper* place, or drift east for the vein which has dipped out. If this mania for drifting through the wall-rock, the hardest of all rock, continues much longer among copper miners, the Legislature had better hurry up *that* bill for County Poor Houses. I have an idea they will be wanted. The Solambo, however, is a good claim. On the continuation of this vein, distinct from the Pedro, at a short distance comes the

KNICKERBOCKER.

It contains 5,100 feet, is in process of incorporation. Main shaft fifty feet deep, showing a vein from twelve to eighteen inches of ore; the balance being mundic. Thus, it is evident, the moment the slate is worked through, the vein will show itself as strong as in the Solambo. Work is suspended until incorporation is completed. A single share in this claim, has a local value of $400. A short distance west of south is the

ILLINOIS.

It contains 3000 feet divided into 3000 shares. Main shaft eighty feet deep. The larger portion of the shareholders reside in San Francisco, and much controversy has existed, whether or not, it were advisable to carry the work on. While, therefore, I express my opinion upon its merits with diffidence, I do not wish it understood I shirk any responsibility attaching to my position. Whether I have, or have not, a practical and theoretic knowledge of copper mining, may as well be proved now as at any other time. There are several prominent men in San Francisco who will know what I mean by these remarks. Decidedly, then I say, the Illinois has a strong, well developed vein, which only requires depth to purify it; that the west wall is distinctly formed; that the *west* drift was a work of folly; that the *east* drift shows when slate will come into the main shaft; and thence how much deeper they will have to go before striking ore. Of that fact, ultimately, I have no doubt whatever. At the same time, I do not think they are on the Solambo vein, but run to the west, between it and the Victoria, where their ledge-rock is very prominent. Some distance to the west is the

VICTORIA.

It contains about five or six thousand feet, and corresponds with the Wann and Hearlem vein, running west of Copperopolis. Tunnel in eighty feet out of 300, which is calculated to strike the vein at 400 feet below the surface. The ledge here is very prominent, showing a strong impregnation of mineral. The location of the tunnel is badly chosen; while the rock is a very hard granite, which will continue. I think, up to the wall-rock. A large portion of that severe and expensive drifting might have been avoided. If they find it necessary to turn the course of the tunnel east, why not have commenced it more to the east and run straight to the vein? Surely the proposition is rational. No work going on when I visited the claim. We now turned to the Solambo, where on the adjoining hill south is the

LIBERTY.

It contains 6000 feet divided into 21 shares. Main shaft 25 feet deep, opening tolerably well on gossan, with a good slate formation, carrying iron pyrites. This claim is under the management of Judge Walworth who owns a large proportion. It is a cross-claim, and the only distinct one I have seen in the entire system. I have not a very favorable impression of the cross-veins, as a principle; though I cannot deny this one has strong, excellent croppings, opens well, and generally looks well. No one deserves better success than the Judge, and I hope sincerely his energy and enterprise may be rewarded.

On the following morning, I went, by request, to examine the mines on Indian Bar, some miles up the river. There are only four here having any pretentions to notice. The first is the

MONTAUK.

It contains 5,400 feet. The vein here shows itself by the river very well, a foot wide, with pure rock, and excellent sulphurets. Nothing, however, can be done with it so near the river; but it may easily be traced up the side hill. Work suspended. The next

THE STATE LIBRARY.

A recent visit to this seemingly antiquated institution gave us much pleasure, and we feel safe in saying that there is no attraction at our State Capital more worthy the pride of our growing State than the extensive collection and great variety of choice works here collected. The dinginess of the cramped up apartments but adds reverential feelings to the reflection of the visitor that he is moving amid a vast congregation of the mental and spiritual, yet living, remains of the mighty dead, and he steps lightly and with noiseless tread through the narrow passages.

The library is situated in rear of the Supreme Court rooms, corner of J and 2nd streets. The entrance is by a flight of outside steps, or iron stairway, from the top of which you pass along a contracted hall, and enter a narrow doorway, which is the only means of ingress to a library which, in its selections, is second to the libraries of but few of the oldest States in the Union. New York, Pennsylvania, Ohio and possibly Massachusetts comprise the entire of these exceptions. In the department of law, California can boast of the best selection of any library on the continent, if we are rightly informed. The number of bound volumes in the library is now upwards of 26,600; not including duplicates. 17,118; of which 7,022 are in the law department, and 10,096 in the miscellaneous department. The number of books added in 1863, is 4,156. The sum of $21,529 has accumulated in the library fund during the past year. This is a large increase over former years, and has been nearly derived from the act passed at the last session of the Legislature requiring the payment of $5 upon the filing of the papers of every incorporated company. Should our incorporations continue to increase as rapidly for a few years to come as they have for the past, the State of California will soon be able to boast of the best library on the Pacific Coast. Valuable additions have been made during the past year. Among others, Kingsborough's "Mexican Antiquities," a recent London publication has been added, at an expense of over $1,400. During the present years we believe it is the intention of the Trustees to add largely to the books of the mechanical and scientific departments, which have hitherto been somewhat overlooked.

If the State Library was removed to a proper location, we are confident that its old visitors would hardly be able to recognize its ancient features, and it is a pleasure to know that when the new capitol is completed, ample and suitable apartments will be prepared for it. Mr. Albert Hart, Deputy Librarian, to whose courtesy we are particularly indebted, informs us that the visits of strangers are much more frequent than formerly. Those who visit Sacramento during the session of the Legislature, will do well to visit this institution. It is open at all hours from 9 o'clock A. M. to 10 P. M. during the session, and from 9 to 4 at other times. W. C. Stratton, the present Librarian is active, courteous and indefatigable in the discharge of his duties. The books are carefully arranged and so classified that any book can be found at instant notice.

Turpentine Factory in Oregon.—An establishment for manufacturing turpentine is about to commence operations at Portland, Oregon. The retort, lately finished at the Oregon Iron Works, weighs 1,387 pounds, and is the largest casting yet made in Oregon.

Turpentine.—Mr. J. W. Jabobson, of Marysville, says the Appeal, has received a State warrant for $800, the amount of premium awarded by the Legislature to the party who should be the first to manufacture a given amount of turpentine in this State. Mr. J. has also taken the premiums awarded by the Marysville, Stockton and State Fairs for the encouragement of the home production of this important article of commerce.

The rage of the multitude in California now runs to silver mining, and everybody who has a few dollars to spare is investing in some marvelously rich mine, in some unpronounceable locality or other. The mining excitement is like that of 1852, which made a few people rich but a great many poor, and gave the business of the State a check from which it did not recover for some time.—*Eastern Exchange.*

Our cotemporary is right with regard to the "marvelously rich mines." The last sales of the Gould & Curry were at the rate of $5000 per foot. There are 1,200 feet only, in this mine, which foots up to the snug little sum of $6,000,000 in the aggregate From the report of the secretary of this company, which has just been published, it appears that the total yield of the mine for the past year has been $3,929,306, lacking but a fraction of *four millions of dollars.* The capacity of the works both for mining and milling will soon be greatly increased, which will of course increase in a corresponding degree the yield of bullion. And yet the Gould & Curry is not the best yielding mine in Washoe, as is sufficiently proven by the fact that there is ground in Gold Hill that will sell for twice the sum which can be obtained for Gould & Curry. To be sure we have "fancy silver stocks" in our market, and many other stocks which people that are acquainted with "fancy" they would like to own. A score or two of mines, only on the Eastern slope are already turning out, weekly, their *tons* of bullion, while we have some two or three thousand which are not yet prospected, but from which we soon expect to add, weekly, *several tons* to the aggregate of the bullion crop. Bye and bye we shall be able to buy out several of the Eastern States, pay off the National debt and if need be, construct the Pacific Railroad, by way of pastime. Our Eastern friends need entertain no fears of any "check" in California operations.

The *Alta,* of Wednesday, proposes that the Federal Government should levy an "export tax" upon all the tobacco which is shipped to foreign ports, and asks—"What is to prevent our Government from compelling France and England to share that revenue [which they derive from tobacco.] with us?"

Nothing but the following extract from Sect. IX, Art. 5 of the Constitution of the United States;—"No tax or duty shall be laid on articles *exported* from any State."

Silver Bricks from Humboldt.—Two fine silver bricks are on exhibition in a broker's window, at the corner of Montgomery and California streets. One of these bricks was obtained from three tons of ore, from the Humboldt Co's claims, in Sierra District, Humboldt. It weighs 1,277 oz. worth $1202.41. The other brick is from 1,900 pounds of rock, out of the Moonlight ledge, and is valued at $329.54. The rock from which both of these bricks was taken was crushed at Fall's Mill. They afford very weighty arguments in favor of the Humboldt mines.

Bullion by the Dray Load.—It would do the eyes of some of our Eastern friends good to see the dray loads of silver bricks which are so frequently carted about San Francisco, from the assay offices to the banks and from thence to the Isthmus Steamers. It is not uncommon to see a good load for a two horse team taken from a single banking house to the steamer in silver bullion, in addition to its gold shipment.

The Ione *Chronicle* says the Newton Co. have stopped taking out ore, for the purpose of re-modeling their working shaft to adapt it to machinery. It will take about three months to complete the work, when the company will be prepared to work their mine to better advantage.

An Apt Comparison.—The London *Times* very aptly compares the proffer by Louis Napoleon of the crown of Mexico to the Austrian Archduke, to a certain offer made by the Prince of Darkness, about 1800 years ago. The arrogant Lucifer didn't own a rood of the mighty kingdoms which he would give away.

COPPER—ITS PRICE AND DEMAND.

Copper at the present time is very active throughout the Eastern Markets, and prices have materially advanced under the increased demand and the great rise in the price of gold. Recent sales, to the amount of 1,000,000 lbs of Lake, Baltimore, and Bergen Port, have recently been made at prices ranging from 35 @ 40½ cents. Holders seem disposed to a still further advance in their prices.

At latest European advices the London and Havre markets were still tending upward. Sales of Chili had been made in the latter at 289f; of Minnesota at 290f, 2½ in cash.

The demand for Copper is increasing at a wonderful rate throughout Christendom, as is sufficiently evident from the above quotations. The consumption of copper in the United States for several years past has averaged about 25,000,000 lbs annually. Last year it increased to 40,000,000. Those best informed say that the consumption for the present year will be largely in excess of the one just passed The estimated product of the Lake Superior mines, which reached the market during the year ending September 1st, 1863, is estimated at only 12,000,000 pounds—not one quarter of the probable home demand for the present year.

Thus it appears that our California miners need entertain no apprehensions least they should find the copper market overstocked by the time they get their mines fully opened. The discovery of copper in California, in fact, has been most *opportune* for the needed supply of an important article of commerce.

A Mammoth Apple Tree.—A gentleman of Chicopee, Mass., has on his farm an apple tree remarkable for its size and productiveness. Its trunk measures three feet eleven inches in diameter, and its top spreads over a circle of one hundred and eighty feet in circumference, so that it is doubtless the largest apple tree in the country. Three years ago seventy bushels of apples were gathered from it. It yielded this year also about seventy bushels.

Oxygen.—The element oxygen forms by weight eight ninths of all pure water; it also constitutes over one half of all the solid material of the globe. About one third of the solid masses of the rocks is made up of oxygen. Two thirds of the entire weight of all the bodies of men and animals consists of oxygen.

Custom House Receipts.—The total receipts of the U. S. Custom House in San Francisco, for the year 1863, foot up $4,688,399 38, of which all but $116,752 12 was paid in coin, for duties on foreign merchandise. The increase of receipts over those of 1862 was $1,300,000.

The heaviest treasure shipment, by any one steamer since 1852, was made by the Golden Age on Monday last. The whole amount foots up at $1,797,792. A large portion of this shipment consist of silver bars sent to Europe for coinage.

Eclipses.—According to the almanacs there will be an almost total eclipse of the sun on the 5th of May next—visible throughout this State. There will also be an eclipse of the sun on the 30th of October next, but it will not be visible in this part of the world.

Heavy Transaction.—W. W. Drummond & Co., of Sacramento, recently purchased fourteen hundred feet of Nevada mining stocks, thirty-two thousand acres of timber and farming land, and two hundred city lots in the city and county of Sacramento. Terms cash.

North American Review.—A change in the editorship of the *North American Review* is announced by Crosby & Nichols. Hereafter that magazine will be conducted by James Russell Lowell and Charles E. Norton.

Summary of Mining News.

GLEANED FROM VARIOUS SOURCES.

There appears to be an unusual dearth of mining news about this time. We append such as has come to hand since our last issue.

Brown's Valley, Yuba County.—The miners of this locality held a meeting a few days since; for the election of a Recorder. Numerous candidates were put in nomination, but B. G. Stockton was finally elected. A resolution was passed forfeiting all claims not represented at the meeting. Of course no resolution of that character, would be enforced by any California Court, and such action can only result in useless litigation.

New Quartz Mill.—The Calaveras *Chronicle* says: "The proprietors of the Heckendorn silver lead at Blue Mountain are now erecting a mill near their claim. The mill will be run by water—has four stamps and one of Hepburn's celebrated pans. The company have built a large house over their mill; the ore will be taken down to the works in a shute, already prepared. The mill will be in running order in about four weeks, and if we are not much mistaken, it will turn out silver bricks that will astonish some of the unbelievers who have persistently decried the Blue Mountain range during the past year."

Odd Rock.—A Virginia correspondent of the Grass Valley *National* says: I was shown some rock, a few days ago, which came from a ledge about eighty miles from here, on the desert. It was singular looking rock, having the appearance of red chalk, coloring the fingers from the touch. It was rich with gold, being completely filled with this auriferous metal. Large sums have been offered for feet in this ledge.

The Mines of Carmen Island.—We have received says the *Alta* a rich specimen of copper ore, coming from the lead recently discovered in the Minnehaha mine. Mr. Penrose, the Superintendent, says he has "found it at last," and that this very rich vein is four feet wide, and well defined. The ore in this lead goes high in percentage, up among the fifties, with silver at the rate of some $50 to the ton. The time, patience, and money expended by the owners seem now certain to return them a well earned reward. Very rich ore has been brought from Carmen Island heretofore, but we believe this to be the first true, well-defined lode that has been found upon this Island. The San Patricio, San Francisco, and Suerte Companies are all progressing with their work, and are much cheered by the success of the Minnehaha.

The Monte Diablo Mines.—The Contra Costa *Gazette* of 2d January says: Our miners are still industriously at work around Diablo. The Mount Zion tunnel is now about 1,100 feet in length, and it is estimated that 75 feet more will reach the ledge. The road to the Keokuk is not quite completed, but the miners have resumed work on the tunnel. The Great Republic is very promising, and improves rapidly. The Superior bids fair to realize the most sanguine expectations of its holders; the ore now being taken out is very good. The Pioneer is also very promising, but for some cause or other, work is suspended for the present. The Summit of Zion company are running a tunnel to strike their ledge at a considerable depth. The above are but a very small part of the claims in Clayton District upon which labor is being expended with encouraging results. In Diablo District, the Unexpected, Horse Shoe, Alpine and others, are vigorously worked, and held in high estimation by their owners. The scarcity of powder is a source of no little embarrassment in conducting mining operations.

Bullion from Arizona.—The delay in getting steamers upon the Colorado, to meet the demands for freighting provisions, tools and ores, has induced the Superintendents of a number of mining companies, in the La Paz and Weaver districts, to put up Mexican furnaces to smelt out the gold, silver and copper, from some of the richest ores, for immediate shipment, leaving the second class ores to be shipped for reduction, here or elsewhere, by some more saving and thorough process, when the facilities for transportation become greater, as they are likely to become before many months more have passed. One hundred and twenty pounds of bullion extracted by this process were sent across the desert from La Paz, a few days since, by one company, and another company made a shipment of nearly the same amount.

Reese River.—Highly flattering reports still continue to reach us from Reese River. New and promising leads are daily being developed and the excitement continues without any abatement. The Amador is just now the center of attraction. The ledge is already developed to a thickness of ten feet of mineral bearing rock, upon the whole face of which, it is said, native silver is discernable. Thirty tons of rock from this mine have been sent to the Fountain mill for reduction. The owners are prosecuting the work of development with energy. This is the proper course to pursue. The entire neighborhood of the Amador mine is reported as very promising, and every day is bringing to light some new development. The Rough and Ready is said to be nearly as large and promising as the Amador. The casing is as hard and smooth as polished marble. The General Banks, Coral, Rough and Ready, Oakland and many other companies, are taking out exeellent rock, and all have very large and well defined ledges. The Black Swan has had a small lot of rock crushed at the Union mill, which yielded $250 to the ton. An application by the Mills, Post & White Company, for an injunction against the Black Swan Company, was on trial on the 20th inst. before Judge Locke at Dayton. The Troy ledge has been stripped for a short distance on the surface, and several tons of rock taken out for crushing. A contract has been let to sink an incline. The *Reveille* says considerable excitement was caused in Clifton a few evenings since by the exhibition of a very fine specimen of gold bearing quartz. The owner said that it came from a place within twenty miles of Austin, but refused to tell where, so that the boys were unable to satisfy their intense desire to get a few feet in the original or even take up an extension. A contract has been let to sink an incline upon Vesta ledge. The work will be commenced immediately, and pushed forward as rapidly as possible. A contract has also been let to sink an incline on the Dunkirk ledge to the depth of twenty feet, work will be commenced immediately. Some of the rock was recently crushed and a very flattering yield was obtained. Brook's mill has been crushing rock from the Union No. 2. The mill is provided with five stamps and four large pans. The Tesoro ledge at a depth of thirty feet is four feet wide; some 300 pounds of rock from this ledge recently crushed at the Fountain mill yielded $500 per ton, about one-fourth of which was in gold—an unusual circumstance among Reese River ledges. The *Reveille* of the 31st ult. says that the Oregon mill, owned by O'Neil, Frost and Co., was started on the 30th. Everything worked beautifully—all the complicated parts of the machinery working properly in their proper places. The building is a substantial structure, and is sufficiently large for all purposes. The engine is of fifty horse power, and the stamps, ten in number, weigh over five hundred pounds each. Eight iron pans, each five feet in diameter, have been put up. The mill is supplied with everything requisite to do first class work. It commenced work on rock from the North Star ledge.

More Bullion.—We saw, day before yesterday, says the *Reveille* of the above date, at the banking house of Paxton, Thornburg & Co., ready for shipment, five large and fine looking bricks. One weighing 601.15 ounces, 949 fine, and worth $737 60, had been obtained from second class Union No. 2 rock. Another wheighing 244.80 ounces, 932 fine, and worth $294 98, was from the Ethan Allen. Another weighing 165.82 ounces, 985 fine, and of the value of $211 17, was from the Whitlaeh Yankee Blade. The two others were valued respectively at $269 52 and $97 61. Keep them coming. The Revenue Company, Bathurst ledge, are having ten tons of ore crushed at Thomson's mill, which promises a large yield. The company are energetically at work on the mine, having a shaft down twenty feet where the ledge is four feet wide and widens as it goes down. Forty feet of the ledge is stripped eight feet in depth, and looks well. The Essex ledge was located last June. It is situated just north of the road, in the western end of upper Austin. A prospecting shaft is now thirty-five feet deep, and it is thought will strike the ledge in a short time. Work is being carried on. Mr. Davis, of Cañon City, has sold his mill-site in that town. The purchasers, Condee, Brewster & Co., intend building a fine steam mill immediately.

Humboldt.—Encouraging reports are coming in from the Humboldt country. The silver bricks at the corner of Montgomery and California streets, elsewhere described, are attracting considerable notice. The Humboldt *Register* of the 26th ult., says Wells, Fargo & Co. shipped on the Monday previous 88 lbs. of bullion, worth $1,300. $130 to the ton would be accounted good silver ore, in most countries. Also that the Lang Syne mill has quit work for the present to put in new machinery. The ledge formerly had so large a preponderance of gold over other metals, that it was thought unnecessary to put in pans for saving silver. As they get down, however, the gold gradually gives place to silver, and it is now found to be a great waste to run this silver off in the tailings. The pans are at Star and will soon be in their places and at work.

The *Regsiter* gives encouraging accounts from Echo District. The Masonic Ledge is pronounced valuable; a few days work has developed a vein over three feet in width and greatly improved in appearance from where it was first opened. The Washington Series, comprising three large veins, shows good mineral, although but little work has yet been done. The Wilson is pronounced the "big thing" in this district. It is over 25 feet wide! The quartz is of a reddish color, and all contains gold; while all through the ledge are veins of different kinds of silver-bearing minerals; some of them containing galena, others containing black, brown and gray sulphurets of silver; and close to the western, or foot wall of the ledge is a well-defined vein, very rich in chloride of silver. The company has, under the able management of the foreman, Mr. Gouchat, started a tunnel which will strike the ledge at a depth of four hundred feet, and also cut the Ferguson ledge (another ledge belonging to the Wilson company) at the depth of three hundred feet. This tunnel will be about six hundred feet long when it strikes the Wilson ledge. It is now in eighty-three feet.

Fall & Price's mill, at Unionville, has been running successfully, with the following results:—

The Monitowac has yielded from $375 to $400 per ton. The Gem of the Sierras yields from $225 to $300 per ton. The Ne Plus Ultra yields from $200 to $300 per ton. The Ophir, one of the ledges in the Empire Tunneling Co., yields from $206 to $225 per ton. The Mars, which they are now working and crushing, yields from $100 to $112, but this was refuse rock which has been thrown to one side. This ledge will average much higher than that. The Minnesota Gold Ledge yields $125 to the ton. These are the results of the working of from five to ten tons of each ledge, and none of this ore has been taken out at a greater depth than eighteen feet from the surface.

Many other ledges in this region have been thoroughly tested by the regular working process. There has been no time in the history of the Humboldt mines, since their discovery, that the future looked so promising as now; and there is no people more confident of success than the miners of Humboldt.

Owen's River.—The latest accounts from the Owen's River region are highly encouraging. It appears that the Rhode Island, Halleck and Governor Low claims are likely to prove valuable. Mr. Geo. B. Perry, agent for the Union Mining Company was at Aurora a short time since, on business connected with the company. He gives encouraging accounts of the mines. A correspondent of the *Alta* writes from Bend City, that the Union Mill is now in operation, with eight stamps at work, crushing gold rock from the Eclipse Lead, a short distance off. Although steam is used at this and the Ida Mill, one mile above, it is the intention to make use of the abundant water power which the river affords for the entire length of the district, sufficient to run any quantity of machinery. Numerous parties are await-

ing the completion of the Owen's river canal, to avail themselves of its hydraulic facilities, and the company should hurry up the work as fast as possible. At this place, which is located in one of the numerous bends of the river, three months since, not a house beyond the tule and willow huts of the prospector were to be seen; now about thirty well built houses are in view—adobe structures, it is true, but neat and substantial as the best brick structures.

The Visalia *Delta* of a late date says: Owen's River Valley must be getting populous, judging by the numbers continually passing for that destination. No less than sixty-five teams, besides horsemen, have passed within the last thirty days. We learn by Hanks, Passmore and others that new and rich discoveries are continually being made, and the work of development goes briskly on. Col. Stevenson, recently from that region, takes with him to New York rich specimens, amalgam, etc., which he confidently believes will enable him to procure a million of dollars capital to enable him to operate in the Russ and Inyo districts. Capital is all that is required to make that the leading mining district of the State.

Annual Report of the Gould & Curry Mining Company.—From the annual report of the late President, Jno. O. Earl, Esq., we glean the following interesting facts: During the past year there has been delivered from the mine 4,812 tons of second class ore to the company's mill, yielding $1,520,651 53—$316 per ton, and to various other mills 43,907 tons third class ores, from which have been extracted $2,400,204 87—$54 56 per ton; 24½ tons first class ore, valued at $2,800 per ton, have been shipped to England. From assays made daily the ores worked have averaged in value about $400 per ton; the amount of metal extracted, $316 per ton. The cost of reducing the ores is about $38 per ton. The quantity of ores developed in the upper works has steadily increased, in addition to the large bodies continuing below. The new improvements to the reduction works are to be completed within thirty days, and eighty stamps will be in successful operation the latter part of March next, enabling the company to reduce about seventy-five tons of second and third class ores every twenty-four hours, producing a large amount of bullion, and at less expense. The cost of mining the ores, including all expenses, does not exceed $8 per ton. The Company have now on hand fully three years' supply of fuel. The managers are recommended to sink and prospect the lode to an additional depth of five hundred feet. The assets of the company, exclusive of bullion on hand and balances in the treasury, are valued at $1,360,000.

Paper.—The paper upon which we are now printing the Press is the best that can be obtained of its size in this market. In strength and whiteness, it will be observed to be of a superior quality. In order to secure a heavier article designed to be used by us, we have sent our orders East, with the intention of importing our own stock. With the abundance of excellent material going to waste in California, we regret to acknowledge that there is no paper mill on the coast that yet furnishes a superior quality of printing paper.

Important Decision.—An important decision was made by the General Land Office, on Wednesday last, and announced in this City by telegraph, the next day, involving the title of the site of the city of Red Bluff, California, in which Granville Doll was claimant, and the citizens of Red Bluff contestants; the case being an appealed one from the Register of the State. The decision is adverse to the claimant.

The Aquila.—The effort to run chains under the Aquila have not yet succeeded, although hopes are still entertained that the object will be accomplished. No answer to propositions on this side to raise the ship have yet been received. The divers which have been sent out by the Government and the underwriters are expected on the next steamer.

[Written for the Mining and Scientific Press.]

From Owen's River.

Owensville, Key's Mining District, }
Owen's River Valley, Jan. 1, 1864. }

Messrs. Editors:—Thinking that a few lines from this new and distant mining region might be interesting to the many readers of the Mining and Scientific Press, I send you the following.

A little more than a month ago, the Indians held undisputed possession of this part of the valley, having killed some of the prospectors and run the others off. But the supposed wealth of the hills could not be given up, and now there is a town of sixty inhabitants. The climate is considered superior to any locality on the Eastern slope. The valley is ten miles wide, and is well watered by Owen's river and other small streams running from the mountains on either side. We have a large share of agricultural land; Bishop's creek, a large and beautiful stream which flows from the Sierras, waters a tract of fertile land four miles long, by a little more than three in width, which is fast being settled up. The river is bordered by splendid grass land. The mines are thought to be exceedingly promising. The ledges are numerous and full of metal, but we have not tested them sufficiently to know what kind, or what proportion of the different metals they contain. Gold, silver, iron and lead are found. Many energetic prospectors are out among the hills every day, making new discoveries. There are two companies now operating. The Rubicon company, superintended by Mr. John Evans, of your city, are working four of their ledges. The Last, Manhattan, Twin Sisters No. 1 and No. 2, is being worked night and day. Their prospects are highly flattering. The San Francisco company have their buildings up and are ready to commence on their ledges. I think the mineral wealth of our hills, connected with our agricultural resources, will soon make this a place of note.

Subscriber.

Assessment and Sale of Mining Stock.—In the Senate, on Thursday, Mr. Haskin introduced the following bill:

Section 1st.—The Secretaries of all Mining Companies within this State, when advertising the assessment on the stock of their respective Companies, or when giving notice of sale or account of any delinquency, shall name the District in which the mining ground is situated.

Section 2d—Repeals all former conflicting acts.

Some Legislative action similar to the above is greatly needed. We have repeatedly called attention to the evil which the above bill is calculated to remedy. The bill, however, is not quite as full as it should be. We would suggest that the bill be made applicable to all mining notices whatever, where the name of the mine or company is referred to. The notices calling the annual meeting of stockholders for the choice of Trustees, etc., should, by all means, be included.

Important Military Order.—A military order has been issued from Headquarters of the Pacific Department, notifying all persons on Catalina Island to vacate forthwith. The object of this order does not appear. A reasonable conjecture is that the island is wanted by the Government for fortification purposes. It is evidently a very important position for such employment. The order, however, must work a great hardship to those who have commenced mining operations thereon, as we understand considerable capital has been expended, and most encouraging developments already made. Captain West, with his company, was to take possession of the island on the 26th ultimo.

The Phœnix Fire Insurance Company, of Hartford, is one of the oldest as well as best in America. Mr. R. H. Magill, general agent for the Pacific Branch, is introducing a new system of conduct in the insurance business here, which cannot fail of success, and rendering the Phœnix a favorite and foremost company.

ENLARGEMENT
—AND—
Important Improvement
—OF THE—
MINING AND SCIENTIFIC PRESS.

Enlarged from Eight to Sixteen Pages at the Commencement of Volume VIII, January 1st, 1864.

Two Volumes (of 416 Pages Each) per Annum.

Published every Saturday.

SUBSCRIPTION TERMS IN ADVANCE:

One Volume, six months,.....$3.00
Two Volumes, one year,..... 5.00
Five Copies, one year,.....20.00

The present proprietors of this journal announce with confidence their determination to render to the friends of Science, Mining and Mechanical Industry a newspaper published upon this coast worthy of their patronage at home and their pride abroad. We shall seek favors only through our endeavors to merit them.

The Editorial Department

Will be conducted with ability, in a liberal and reliable manner sparing not in expense, veneration for honesty, or respect for common sense.

Competent Correspondents

Will be employed to furnish us full and reliable information concerning newly-discovered mines; and through vigilant efforts we shall secure for our readers the latest intelligence from all important mining localities. In our list of

Occasional Contributors

We have the privilege of numbering gentlemen ranking among the most talented and experienced writers who manifest a prominent interest in the progress of Art and Science upon this coast, including the names of

Prof. J. D. Whitney, J. D. Churchill, A. M.,
Dr. T. M. Logan, A. B. Paul,
Dr. J. A. Veatch, H. S. Brooks,
Rev. O. C. Wheeler, W. Wadsworth,
M. Atwood, T. Price.

Illustrative Drawings and Engravings

Superior in finish and useful and attractive in character, will be published from time to time, representing the most important new inventions and improvements in the art and science of

Mining and Mechanism

Developed upon this Coast. Each number of the paper will contain full and correct reports of

Sales by the Stock Boards of San Francisco.
Sales by the Stock Board of Virginia City.
Sales by the Stock Board of Esmeralda.
Sales by all Mining Stock Boards.
Reports of Bids and Sales in San Francisco.
Reports of Bids and Sales in the Territory.
A Weekly Review of the Stock Markets.
A Weekly Review of General Mining Interests.
General Summary of California Mining News.
General Summary of Mining everywhere.

Valuable Information for all Miners.
Indispensable Knowledge for practical workmen,
Practical Suggestions for intelligent artizans.

Valuable Facts and Statistics

Essential to members of all trades and professions; the best approved methods of mining; the latest discoveries and inventions in mining operations; practical, scientific views upon geological and mineralogical questions; the proper methods of reducing ores and saving the precious metals. In fact every sentence calculated to lessen the number of hard blows uselessly rendered by miners and working men, and add wealth by intelligent saving of material or labor, will find welcome space in our columns. The paper will afford many

Practical Hints

With regard to the manner of working and securing mines, derived from the actual experience of parties in our own and other countries. Also hints concerning the location and possession of mining grounds; the laws peculiar to different districts and countries; and notices of all important decisions of the law in mining cases. As a

Book of Reference

The bound volumes of the Press will find no rival in value to the intelligent and industrious citizens of the Pacific Coast, who cannot but feel a source of pride in the history of the inventions, discoveries and prosperous developments of the remarkable era through which we are now passing.

The Stock Record

As presented in our columns will be found correct, distinct and most convenient for preservation and future reference.

For Sending Abroad.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and Newsdealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the Press can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

DEWEY & CO., Publishers.

Office in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

C. W. M. Smith.....W. B. Ewer.....A. T. Dewey.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

MEAD & VAN TASSEL,

HATTERS,

Montgomery St., corner of Commercial,

SAN FRANCISCO.

TO OUR FRIENDS AND THE PUBLIC GENERALLY:—HAVING purchased the entire interest of Messrs. Fishers & Co., in this city, we shall, on the 1st. day of May assume the management of the

HAT EMPORIUM

so long conducted by that firm.

MR. WILLIAM H. MEAD, for the last seven years salesman with Messrs Fisher & Co., respectfully solicits a continuance of the patronage so long and liberally bestowed upon the old House, feeling entire confidence in our ability to suit in every particular.

MR. THEODORE VAN TASSELL, for eight years with Messrs Le Gay & Co., would be pleased to see his friends at his new place of business.

The long practical experience of Messrs. Mead & Van Tassel in the Trade justifies them in saying that their work cannot be excelled either in finish or durability. Having perfected arrangements, we shall be in constant receipt, by every steamer, of soft goods of the very finest of FRENCH AND AMERICAN MANUFACTURE. Our Stock on hand is superb.

Call and examine, and judge of the merits of our claim to the title of "LEADERS OF FASHION."

Respectfully, MEAD & VAN TASSELL.
no2-tf. Montgomery street, cor. Commercial.

WHEELER'S

Amalgamating and Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metals arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the trituration this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation, at the Miners' Foundry, on First street in this city, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

(OVER SAN FRANCISCO BATHS.)

I HAVE RECENTLY RECEIVED FROM LONDON, A NEW AND Beautiful Vulcanite (India Rubber) for Artificial Teeth, which is far superior to any other ever used. It is light, cleanly and durable, and of a natural color. The cheapest and best material for temporary (and in many cases) permanent sets. All operations thoroughly performed, and at reasonable prices. je29

INDUSTRIAL FACTS.

Steam Carriage.—One of the latest achievements of American invention is, what appears to be a practicable steam carriage for common roads. It is a Boston invention and has been exhibited at Agricultural fairs, on race courses, and upon the country roads of Massachusetts. It recently made its appearance on Broadway, in New York, and at latest accounts was to test its speed on the famous Central Park. The general appearance of the vehicle is that of an ordinary wagon, with a double seat in front. Just behind the seat are the boiler and engine, occupying about the same space as the reservoir of a soda fountain. The furnace hangs within a foot of the ground, and, when the door is open, a fresh current of air is admitted to the fuel while the carriage is in motion. The motive power is applied to the axle of the hind wheels. The steering is done by a crank, which deflects the front wheels to the right or left, at the pleasure of the driver. With a pressure of twenty pounds to the inch, this engine will propel the carriage, with a two-horse power, at a safe rate of traveling. Plank and macadamized roads offer the best opportunities for speed, of course; but any sandy, or muddy, or steep road, can be traversed by the steam carriage as readily as by a span of horses. The engine needs watering about as often as a horse, and takes in about the same quantity. The cost of running is estimated at one cent a mile. The cost of the carriage and engine it is estimated will be about $1600. The maximum speed of the machine is estimated at a mile a minute and a half, with a smooth road, and everything to favor.

Telegraphic.—If mechanical appliances do not fail the projectors, England will, by next spring, be in telegraphic communication with Madras, Calcutta and Bombay. The governments in prosecuting this work has proceeded so quietly, that with the exception of a few scientific men, the near completion of this work was, until quite recently, scarcely known outside of its projectors and their employees.

Mr. Steers's Swift Man-of-War.—The swift steamer which Mr. Steers recently contracted to build for the Government was commenced some weeks since, and is now well advanced. This craft will be the fastest, it is presumed, in the navy, unless Mr. Delano's ship should beat her. She will be over three hundred feet in length, and probably three thousand tons burden. Persons who ought to know say that she will be able to steam twenty miles an hour.

Small as Connecticut is she can boast of having nearly 3,000 industrial establishments, and a capital to the amount of $57,000,000 in manufacturing business, giving employment to 60,000 hands. If we add together all the industrial products of North Carolina, South Carolina, Georgia, Florida, Alabama, Texas, and Mississippi, then Connecticut is $20,000,000 in advance of them all.

Mints of the United States.—The mints of the United States have coined since they commenced operations—a period of less than seventy years—the large amount of eight hundred millions of dollars—about one-fifth of the whole metallic currency of the world. Of this amount five hundred and twenty millions of dollars were derived from the mines of the United States.

Large Locomotive.—The largest locomotive in the United States, if not in the world, has been built for the Philadelphia and Reading Railroad Company. It has twelve driving wheels, 43 inches in diameter. The cylinder is 20 inches in diameter, and the stroke of piston 26 inches. The weight of the locomotive when in running order is 105,320 pounds. This locomotive is intended for a pushing one, to force heavy coal trains up the road.

A waterproof floating mail bag has been patented in Liverpool. It is made of the best duck, impregnated with caoutchouc. When filled with ordinary mail matter, with the addition of two bricks, it was perfectly buoyant. The inventor says that he can make the whole contents of a ship's mail room buoyant and connected together so as to form a raft or buoy in case of necessity.

New Mechanical Appliances.—Instead of riveting the plates of steam boilers, efforts are now being made to weld the plates, thus to produce the boilers free of joints. The method to effect this is to heat the edges of the plates to a welding heat with gas flame, and hammer them together. A small Cornish boiler has been finished by this method. In forming the deck beams of the iron frigate *Warrior*, the webs of two T irons were joined together by a bar of H section, called a glut, which, with the edges to be welded, were raised to a welding heat by jets of gas flame; the whole was then welded together, uniting the angle irons and deck beams into solid forgings, instead of bolting or riveting them together. In the building of iron vessels this system deserves universal attention.

Annual Treasure Shipments.

During the year 1863 the following shipments of treasure were made by the Pacific Mail Steamship Company, from this port:

	Through Treasure.	England & Panama.
Jan'y 1	$ 393,498 35	$1'086,863 56

	$10,390,229 65	$31,179,465 01
Total shipments to New York, England and Panama...		$41,569,788 67

For the information of our readers we give the shipments of treasure since 1849, and including that year:

1849	$ 4,921,250
1850	27,476,346
1851	45,882,033
1852	46,586,132
1853	57,331,024
1854	51,328,335
1855	44,610,090
1856	51,142,238
1857	49,300,187
1858	43,897,199
1859	47,661,209
1860	42,303,315
1861	40,639,040
1862	42,980,809
1863	41,569,783
Total	$637,902,554

The shipments to China and other points by other vessels than those of the Pacific Mail Steamship Company, are included in the total shipments of the year previous to 1863. If these were included in the estimates of the last season they would swell the gross amount to a total not greatly below that of any previous year.—*Alta.*

Where Does the Rain Come From?—Mr. Glaisher, in England, recently made a scientific ascent in a balloon in a rain storm, to study the rain in the place where it comes from: "On the ground the rain drops were as large as four penny pieces upon his note book; a little higher up they merely dotted it like pin points; higher, still it was a Scotch mist, or wet fog; yet higher the fog was dry, and at 3,500 feet the balloon was out of rain, though it was falling on the earth. Above them, even at that elevation, was the stratum of cloud which science, without ever having seen, had daringly predicted as always above 'the overcast' of a rainy sky; and at the height of 1,000 feet, in descending the balloon was in a current of wind from one quarter, and the car in another from one nearly opposite—southeast and southwest respectively; in other words, the Columbus of the clouds had sailed into the eddy between the confluent currents of atmosphere which were mingling their temperatures, and thus disengaging some of their moisture for the behoof of the cornfields and pic-nic parties below."

Encourage Home Industry.

The Marysville *Appeal* has a very sensible article under the above head, wherein it very properly takes the last Legislature to task for want of discrimination in its award of premiums for the encouragement of home industry. The *Appeal* says:—

"The premiums offered reach out beyond the scope and capacity of our State. There is no practibility or common sense in offering premiums for products which are not adapted to our climate or soil, and which never can be productive of gain to the producer, or reward labor by enhancing wages. Who believes that the farmers of this State can compete with the islands of the Pacific, on the Southern States, in sugar or molasses making? Who believes that Chinese Sorghum growing can ever be made a profitable business in California? what use or benefit is there in offering $500 premium for 500 pounds of sugar from the sorgum plant? Or, $500 for 200 barrels of molasses from the same? The sugar can be raised, the molases manufactured, but we confidently believe that such a crop will not be practicable or profitable with the farmers of this State. The same can be said of flax and hemp, for which $2,000 is offered an each. So with cotton, for which $3,000 is offered for the first 300 bales of 300 pounds each."

"The *Appeal* adds: "A premium on tobacco, hops, broadcloths, tweeds, cassimeres, woolen blankets, carpets, sacks, drawers, undershirts, boots and shoes, tar, resin, pitch, spirits of turpentine, paper, glassware, seems more sensible to us, because all these articles can be raised or made, with profit, after the premiums are exhausted. But it is nothing but a waste of money and labor to offer premiums on products and manufactures utterly impracticable. Who is simple enough to suppose that Californians can compete with the Chinese in tea raising, or rice growing? If our soil was adequate, who wishes to put labor at less than ten cents a day in order to drive out these foreign products? Will it not conduce more to our general prosperity to plant our soil with crops certain of producing a remunerative reward, and which tend to advance rather than depress the labor of the country?

There is no question but that this act of 1862, needs amending. The mining interest, the great leading interest of the State, is entirely ignored, if we mistake not, in this "Act of Encouragement." The same may be said of our mechanical interests. Give encouragement to the miners and mechanics, as well as to the farmers. We can have neither cheap board, nor cheap clothing, without machinery. Our mines, especially our quartz mines, are sadly deficient in effective machinery for reducing quartz and saving gold and silver. Why not encourage our mechanics to get up such improvements. We says with the *Appeal*, "Let the Legislature offer a premium for improvements in machinery, domestic wares, agricultural implements, wagons, plows, mining machinery, implements for amalgamating gold, sluices for mining the immense quantities of auriferous sands in our rivers and ravines. Give smaller premiums, and offer inducements to all the common and practical business of the State. Let us buy our tea, sugar and coffee—wear woolen instead of cotton—make our own machinery—tan our hides and manufacture our own boots and shoes—feed the world with our surplus wheat which grows in such profusion—mine our rich lodes—confine our labor at home, and cultivate productions adapted to California soil and climate."

The Ainsa Aerolite, which was for some time on exhibition on the Custom House steps in this city, has been received at the Smithsonian Institute, in Washington, and is attracting much attention. It is in the shape of a ring, the greatest diameter being over four feet. Its weight is fourteen hundred pounds. It was presented to the Institution by the Ainsa family, of California, and will be known as the "Ainsa Meteorite." A full analysis of the Meteorite will be published by the Institution.

Stuffing for Mattresses, Etc.—H. C. Croudal of New York, has obtained letters patent for a peculiar manner of treating cork waste, whereby the same is rendered soft and elastic, and particularly adapted for mattresses, its principle advantages being its coolness, cleanliness and immunity from vermin and moisture. It is particularly adapted for hotels, and army use. Its peculiarities also render it highly desirable for use in the mines.

Mining and Scientific Press.

SAN FRANCISCO:

Saturday Morning, January 9, 1864.

BEGINNING OF THE YEAR.

THE NEW YEAR opens under highly favorable anspices for the mining interests of the Pacific Coast. Money is easy and the amount of capital seeking investment in this direction is unusually large. The war cloud which has long hung over us with such terrible gloominess, begins to show evident signs of breaking away. A victory has recently been achieved by the Union forces greater than any that arms can boast of in recent times. Thanks to the prudence and firmness of our government, willing justice has been obtained from a great European power, and confidence and fraternal feeling once more established between two nations speaking the same language and occupying foremost positions among the nationalities of the earth.

Melancholly is giving way to animation everywhere. Industry is prosperous throughout our State and the world. The metal market, so intimately connected with California industry, was never so buoyant as at the present time, and the future for copper, as elsewhere noticed, is most promising and hopeful for the growth and development of that important branch of California mining. The mining share market of this city is unusually active, and never more elated over rich developments than at this present writing. That we possess extensive and sound mining operatious, to which we can look for large and lastiug profits is now generally conceeded both at home and abroad.

The first annual exhibit of the Gould & Curry Mining Company, which has just been laid before the public by the President and Secretary, affords a most convincing proof of this fact. This company first commenced shipping bullion from its works in February last, and the report before us already foots up an aggregate gross yield of the mine, for the year ending the first of December last, to within a fraction of *four millions of dollars!* The amount of dividend declared for the seven months ending with the above date, is set down at $1,464,400. This is surely a most astonishing exhibit for the first year of active operations, and is without a parallel in the history of mining adventure. It cannot fail to add largely to the growing confidenee in our silver mines in the Atlantic and European markets.

The experience of the last few months has taught our people, especially those seeking mining investments, many important lessons in the art of distinguishing between legitimate operations and those of a worthless character. It will always be the aim and object of this journal to so employ its efforts as to save its readers from losses and direct them to safety and profit; this end will ever be kept steadily in view, whether we are looking to operations "on 'change," or to the more active labor in the field of pratical mining.

It is with pleasure that we look upon this cheering and hopeful picture at the beginning of a new year. Let us hope that our anticipatious will be more than realized and that the commencement of another year may find us not only prosperous in our industrial pursuits, but cheerful and joyous over a united, peaceful and happy country.

THE CALIFORNIA TEACHER.—The seventh number of this valuable publication has come to hand. It is well filled with instructive and entertaining reading

HOME vs. DISTANT MINES.

While we fully appreciate and acknowledge the general benefit that has accrued to the country at large from the disposition which has been so universally manifested during the last two or three years, to seek distant mining fields both for prospecting purposes and for investment, we cannot witbold the expressiou of an opiniou that our people are beginning to neglect home mines. Rambling off into distant regions in seareh of that wealth wbich may be found with almost or quite equal profusion at home, may be a good thiug for the general advancement of our Western Empire, but we apprehend that it has been carried to excess. Many thousands of our population, during the past seasou, in particular, have gathered togetber every dollar they could raise and gone out into the great deserts on our Eastern or Southern border, with barely means to take them there. Disappointed in the object of tbeir search, they have been compelled to undergo most extraordinary privations in order to sustain life or work their way back to their former homes, to escape the still greater sufferings which awaited them from the approaching rigors of a mountaiu winter. Many hundreds, doubtless, have found lonely graves in those distant regions, of whose taking away no tidiugs will ever reach their friends "at home."

This style of thiugs, we trust, has had its day. It is time our people learned that the leading prizes iu the great lottery of mining are few in number and seldom attainable except at a great outlay of money, time and patience. Better, as a general thing, let well enough alone; be satisfied with a steady paying business, even if it is but small, so long as it is sure.

We have in California as good miues, in tbe general average, of either gold, silver or copper, as can be found outside, far or near. We may not have a Comstock in California, neither has Nevada Territory an Allison Ranch or a Massachusetts Hill gold mine. With few exceptious a silver mine has to be opened and proved at great expense before it can have any material value or produce any important returns. Things are very much changed from what they were only a few months ago. Men cannot now go out and hunt up a uine and sell it for a large amount of money on the strength of a few specimens of silver ore. Money, skill and work must now be expended on a mine to give it value. To those who would place themselves on such a platform, and who desire to engage in legitimate mining, California affords quite as good a field as either Washoe, Reese River or Mexico. First, there is here better legal security; the prices of freight on miniug supplies and of labor must always give California a great advantage over distant mining fields. Again, the California miner, as a general thing, finds more home surroundings, more social enjoyment and greater moral restraints, than are met with in the regions to whicb we refer. How many of the twenty or thirty thousand people who have crossed the mountains the past season, have bettered their condition or even their prospects by so doing? On carefully casting about, each one for himself, we venture to say that the number will be found to be few—very few, and vastly disproportionate to any similar number who have continued in steady occupation in their accustomed localities. The aggregate weight of disappointment which has settled upon our people by reason of want of success in distant prospecting operations during the past two years, would be absolutely fearful to contemplate were it not for the brilliant success which has attended the fortunate few. That the disappointments are not absolutely overwhelming, is only to be accounted for from the fact that the success of the few has been sufficient to give living employment to a large portion of the many who would otherwise have been subjected to the utmost extremity of need.

In making these remarks we would not wish to be understood as speaking at all disparagingly of our distant mines or as discouraging adventurous prospecting. We simply desire to throw out these hints as a warniug against undue risks of this description, by those who can illy afford to meet with disappointment. To all such we would say, if you have anything like a paying claim, or remunerative employment of any kind, *don't leave it.* Let the prospecting be done by those who are able to do it—pecuniarily and physically able. When those distant mines are fairly opened, then will be the best time for *you* to go thither—if to prospect and to fail, you will then have a field of labor opened up around you, which will save you from the terrible ordeal which has awaited so many who have already ventured unwisely and to their sorrow.

California Copper Smelting Works.

Some three or four months ago a company, bearing the above name, started their furnaces at Antioch, on the Sacramento river, with a view of concentrating poor copper ores to a rich regulus, and we were confident that they were going to accomplish something; but from one cause and another we have not been able to get any reliable report of progress to place before our readers. To-day, however, we have a few items upon which we can depend.

The copper works started, and the great obstacle to be overcome, the coal, was easily surmounted. The heat was excellent, when they burned the best of coal, but when they attempted to use the screenings, the heat was very poor indeed. Any company starting a similar enterpris emust despair of success except by using only the best of Diablo coal.

The first regulus taken out of the furnaces, at first, assayed 30 per cent. in copper. This being rather low the Company erected a calciner, so that the ore might be roasted in order to get rid of the sulphur. The first charges from the calcined ore, mixed with carbonates and oxides of copper, from various parts of the State, produced a regulus assaying 75 per cent. in copper. This was too rich to work economically. Several other charges produced 60 per cent. in copper. The average produce of the regulus for some time assayed 46 per cent.

It is true the furnace did not work so much ore as the furnaces East and in Europe which employ a superior article of coal; but we are told that the Mount Diablo coal can melt eight tons of ordinary ore in 24 hours, producing a regulus that will assay 46 per cent. in copper. With a little mixture of carbonates the per centage of the regulus may be easily raised to 50 or 55 per cent., using about six tons of coal each 24 hours. Now these are no mere theoretical figures, but those actually realized from practical experiments, on a large scale. At some future time we shall be able to give fuller particulars with regard to the practicability of smelting copper ore on this coast.

CALIFORNIA ACADEMY OF NATURAL SCIENCES.—The annual meeting of this society for the election of officers and transaction of business, took place on Monday evening last, when the following gentlemen were elected officers for the ensuing year: President, Col. L. Ransom; Vice-President, J. N. Eckel, M. D.; Corresponding Secretary, W. O. Ayres, M. D.; Recording Secretary, Prof. W. H. Brewer; Librarian, Prof. J. D. Whitney; Treasurer, Samuel Hubbard; Curators: G. F. Moore of Mineralogy, W. M. Gabb of Palæontology, A. Kellogg, M. D., of Botany, J. G. Cooper, M. D., of Zoology, J. B. Trask of Conchology, H. Behr, M. D., of Entomology.

THE PACIFIC MONTHLY, for January, came promptly to hand. It presents a very fine appearance, with a neat new head. The present number contains the promised chapter on "Brokers," written in the peculiar racy style of the new editress. The entire matter of the magazine is made up of an excellent class of articles, well suited to such a publication. Mrs. Strong continues her story, which is not yet brought to a conclusion. The "Pacific" is eminently a California institution, and well worthy of support.

MINING SHARE MARKET.

The Mining Share Market has been unusually active during the past six days, chiefly in speculative shares. Prices, as a general thing, have materially advanced.

Gould & Curry opened the week with holders at $5150, and closed at $5050 without finding bidders. A brief synopsis of the annual reports of the President and Secretary of this Company is elsewhere given. A dividend of $125 per foot, for the month of December, has been paid the past week.

Ophir shares have been comparatively quiet. But 252 shares have changed hands since our last issue, at from $1490 @ 1570. The stock market has been considerably agitated, during the past week, in relation to some transactions of a rather questionable character, relative to certain sales of the December dividends of this Company. Sales had been effected to a large extent, and no dividend has been forthcoming—it having been omitted for the last month.

Savage shares have been but little dealt in, and sales are quoted at from $2750 @ 2755. Holders, yesterday at $2750 without bidders.

Challar has a firm market at $600, with $620 asked.

Imperial shares are held firm at a material advance over our last quotations; $128 was offered yesterday, without finding sellers.

Overman has advanced from $450, last week, to $575, yesterday, holders firm.

Sierra Nevada opened the week at a slight advance and found buyers at $99 @ $100; yesterday it had receded to $90, with a declining market.

Daney shares are dull at slightly improved rates. We quote sales at $63 @ $65.

Burning Moscow shares have lost their attraction, having commanded but little attention during the past week. Sales were made on Saturday last at $131, advanced to $140 on Tuesday and gradually declined to $110 yesterday. Sales have fallen off, during the past week to 390 shares against 1500 the week previous.

Lady Bryan has now become the favorite. Sales were made on Saturday last at from $42 @ $49, b'yr 30 days; on Monday they reached $80; dropped, to $46 on Wednesday, recovered slightly on Thursday and Friday with light transactions on the last day. We quote closing sales at $57½, by'r 30 d. Transactions to the amount of 3723 shares have been made during the week—within 27 shares of three-fourths of the entire stock, and at rates fluctuating from $42 @ $80.

The Desert—north extension of the Lady Bryan, has been strongly affected, in sympathy. These shares which have lain dormant for the past six or eight months, without any value in the market, have suddenly come again into notice, and have been largely enquired for. Eleven hundred and sixty-three shares have changed hands at from $13 cash, to $29 buyer 30 days.

Uncle Sam is quiet, no transactions reported.

North American has been more enquired after, and large transactions have taken place, generally at rates materially improved. We quote closing sales at $92½ against $77, the highest quotation last week.

Baltimore American has been largely enquired for at a great advance. It opened the week at $30, and gradually advanced to $52½.

El Dorado is quoted at $40; Norton at $6; Burnside at $10; Adriatic at $10½ and Chas. Caney at $8½.

Belcher is not enquired after. This stock is well concentrated and held firmerly at about $1350. Twenty thousand dollars in Bullion was recently shipped from this mine.

Baltic is more in demand, having materially advanced from last quotations; opening at $130, it gradually advanced to $170 on Thursday, but on Friday declined to $115, with a weak market.

Wide West shares are quoted at $50, with a dull market; Antelope, $225—$250 asked; Real Del Monte, $310; Utah, $17; Silver Hill, $12½; Crockett, $25; Napoleon, copper, $40.

OUR ENLARGEMENT.

We omitted speaking, last week, of the improvements made in the first number of our new volume, preferring to let our newly-dressed double-sheet speak for itself; and we have now the happy satisfaction of knowing that our old acquaintances received the new sheet with appreciation, and new friends are coming forward and swelling up our subscription list and increasing our advertising patronage. Rare are the sweet crumbs of comfort which fall to the weary life of an editor, and none of which seem choicer than to hear an intelligent man say, "your paper is greatly improved, every way;" another of good taste remarks, "your new heading (that of the paper, of course,) is much finer than the old;" while a practical man of business adds, "your enterprise is bound to meet with a glowing success," while old and new correspondents are full of congratulations and assurances that they will lend their best efforts in behalf of our readers. Such unexpected encomiums have filled us with thanks towards our kind and interested friends, and inspired us with zeal to hasten on with our work, and strive to fulfil, at least in our humble manner, their predictions. There is always room for improvement in journalism, and by our unceasing personal labors, and th econstautly increasing corps of contributors which is now gathering to our assistance, we are confident of being able to show a mining and scientific journal second to none other. Our field of labor is unsurpassed, and the assistance due us from the greatest mining country in the world, will enable us to place the paper in the sphere it is designed to occupy.

MARTIN'S GRAIN SEPARATOR.—We would call the especial attention of our agricultural readers and grain operators, to the illustrated deserfption of Martin's Grain Separator, which will be found upon our 1st page. This is undoubtedly a very superior machine for the purpose for which it is designed. We have seen the signatures of a large number of citizens, from various portions of the State, interested in such matters, and having a practical knowledge thereof, who pronounce it good for all that is claimed for it by the inventor.

The Old and New Volume.

To perfect the desired improvements in our new series of the MINING AND SCIENTIFIC PRESS, it becomes necessary to commence a new volume with the year, and we are therefore obliged to close up Vol. VII with the present issue. By enlarging the paper, we have 832 pages per annum, instead of 416, as formerly, and for convenience in binding we reduce the term of our volume to six months, the customary period for such publications. No. 1 of the 1st volume of the PRESS was issued by G. H. Whislow & Co., May, 24th 1860. Although the individual length of the intervening volumes has been somewhat irregular, the average period for each figures not far from six months, and rating the seven volumes thus proves very nearly the actual age of the paper. Our receipts, recently given for subscriptions, have been dated by volumes and Nos. To prevent misapprehension on the part of subscribers, we will state that the change of volume alluded to, makes no difference in the *time* of the expiration of their subscriptions. In future there will be but 26 Nos. in each volume. There being but nine numbers issued in Vol. VII, (instead of 52, as contemplated,) those holding receipts to any No. beyond No. 9, of Vol. VII, will receive credit on Vols. VIII, IX, or X, to such date as the No. to which their receipt shows payment would have been issued if no change had been made. For instance, a subscriber holding a receipt given December 1st, 1863, running from No. 5 of Vol. VII to No. 5 of Vol. VIII, will be duly credited, by the new order of volumes, to No. 12 of Vol. IX, which will be published during the last week in November, 1864, at which time he will have received 4 Nos. printed in Vol. VII, (from No. 5 to 9,) the 26 Nos. contained in Vol. VIII, and 22 Nos. of Vol. IX—making in all 52 copies.

OUR NEW AGATE TYPE was purchased of Messrs. Faulkner & Son, agents of James Connor & Sons, New York. We have had the pleasure of donning a "new dress" of their type several times during the past twelve years. We desire no more liberal men in trade than Messrs. Faulkner & Son, and our readers will ask for no handsomer type to read than that presented in to-day's issue.

The Publication of Mining Notices in the MINING & SCIENTIFIC PRESS obtains for them a more general circulation, among parties directly interested, (in this city and throughout the mining districts of the coast, than can be secured through any other medium. State laws require their publication but once a week, and Secretaries and Trustees can make a material saving of costs to stockholders by ordering their advertisements inserted in the journal most properly entitled to receive their patronage—the weekly MINING AND SCIENTIFIC PRESS.

San Francisco Mechanics' Institute.—Organized March 29th, 1855. Regular meetings on the first Friday evening of each month. Building of the Association, south side of California Street between Montgomery and Kearny. Library and Reading Room, open from 8 A. M. to 10 P. M. President, JOSEPH HAITON; Secretary and Librarian, P. B. Dexter.

NEW INCORPORATIONS.

Companies have filed their certificates of incorporation in the County Court of San Francisco during the past week as follows:—

MAMMOTH COPPER GOLD AND SILVER MINING COMPANY.—Location, Hall Mining District, Sacramento County. Capital stock, $210,000, in shares of $100 each. Trustees: Henry Torrey, Ezra Richards and Thos. Hale.

RAVINE CITY GOLD AND SILVER MINING COMPANY.—Location, El Dorado county, Cal. Capital stock, $160,000, in shares of $200 each. Trustees: David O. Johns, Geo. H. Blanchard and Chas. E. Abbott.

ENGLISH BLUE OPHIR GOLD AND SILVER MINING COMPANY.—Location, Rock Spring District, San Bernardino county, Cal. Capital stock, $360,000, in shares of $300 each. Trustees: Joseph M. English, Dennis J. Mlver, Michael English and Daniel C. McGlynn.

VERONA LEDGE GOLD AND SILVER MINING COMPANY.—Location Reese River District, Lander county, N. T. Capital stock, $100,000, in shares of $100 each. Trustees: O. L. Church, D. O. Crocker and Wm. Pooler.

DIAMENA GOLD AND SILVER MINING COMPANY.—Location, Colorado District, Arizona Territory. Capital stock, $500,000, in shares of $5 each. Trustees: Wm. Hedley, Samuel Newell, Frank S. Alling, Henry A. Reed and James M. Patice.

ST. PAUL GOLD AND SILVER MINING COMPENY.—Location, Amador District, Lander county, N. T. Capital stock, $200,000, in shares of $100 each. Trustees: Robert Sherwood, L. A. Booth, Edward McLaughlin, John Garber and A. H. Murdock.

NORTH AMERICAN MINING COMPANY OF SAN FRANCISCO.—Location, Gold Hill District, Nevada Territory. Capital stock, $1,230,000, in shares of $300 each. Trustees: Wm. M. Lent, John R. Spring, John S. Heming, James Freeborn and Chales L. Low.

BOSTON GOLD AND SILVER MINING COMPANY.—Location, Reese River, Lauder county, Nevada Territory. Capital stock, $100,000, in shares of $100 each. Trustees: Stephen De Wolfe, Wm. F. Dyer and Wm. Sanford.

MORROW HILL SILVER MINING COMPANY.—Location, Slate Range District, San Bernardino county, Cal. Capital stock, $141,000, in shares of $80 each. Trustees: Richard McCaffrey, J. B. Cameron and A. J. Maguire.

COLUMBIO SILVER MINING COMPANY.—Location, Colosa District, State of Sinaloa, Mexico. Capital stock, $1,127,500, in shares of $500 each. Trustees: M. D. Sweeney, Wm. Hamill, H. G. Darnell, D. McCarthy, E. W. Linsley, Isaac Tabor and L. G. Elmore.

VICTOR EMANUEL TUNNEL AND MINING COMPANY.—Reese River District, Lander county, N. T. Capital stock, $100,000, in 1,000 shares of $100 each. Trustees: R. H. Loyd, C. F. Mebius, F. L. A. Proche and Edward Wolfe.

LA PRÖSIA GOLD AND SILVER MINING COMPANY.—Location, Sonora, Mexico. Capital stock, $240,000, in 2,400 shares of $100 each. Trustees: M. J. Newmark, M. Prag, L. V. H. Howell, C. Meyer and M. Greenberg.

LA FERNANDEZ GOLD AND SILVER MINING COMPANY.—Location, Tecoripa District, Sonora Mexico. Capital stock, $240,000, in 2,400 shares of $100 each. Trustees: Matthew B. Cox, Martin Prag, L. V. H. Howell, J. Birmingham and D. B. Hinckley.

GOLDEN GATE GOLD AND SILVER MINING COMPANY.—Location, Webster District, Amador county. Capital stock, $80,000, in 800 shares of $100 each. Trustees: T. N. Cazneau, George Morton and Thomas Boyce.

ANNA MOSELEY GOLD AND SILVER MINING COMPANY.—Location, Big Creek District, Lander county, N. T. Capital stock, $120,000, in 3,800 shares of $50. Trustees: Robert Kirt, George A. Hill, Thomas Donnolly, Hanford Earle and N. L. Ingols.

REED GOLD AND SILVER MINING COMPANY.—Reese River District, Lander county, N. T. Capital stock $120,000, in 1,200 shares of $100 each. Trustees: P. J. Wime, J. Carroll and James T. Reed.

MILLER GOLD AND SILVER MINING COMPANY.—Location, Reese River District, Lander county, N. T. Capital stock, $160,000, in 800 shares of $200 each. Trustees: The same as above.

BLACK PRINCE GOLD AND SILVER MINING COMPANY.—Location, Reese River District, Lander county, N. T. Capital stock, $100,000, in 1,000 shares of $100 each. Trustees: The same as above.

AUSTIN HILL TUNNEL MINING COMPANY.—Location, Reese River District, Lander county, N. T. Capital stock $220,000, in 2,200 shares of $100 each. Trustees: George W. Green, Oliver Merrill, M. Cannavan, Jacob Wray and John Gibbin.

PHYLENA GOLD AND SILVER MINING COMPANY.—Location, Humboldt county, N. T. Trustees: M. Tarpey, Jeremiah Dwyer, Wm. Hamill, James Brereton, J. P. Sweeney, F. D. Cleary, P. Brannan. Capital stock, $690,000.

SAN FRANCISCO CITY, GOLD AND SILVER MINING COMPANY.—Same location and trustees. Capital stock, $690,000.

YANKEE GOLD AND SILVER MINING COMPANY.—Same location and trustees. Capital stock, $480,000.

GRATTAN GOLD AND SILVER MINING COMPANY.—Same location and trustees. Capital stock, $690,000.

SANTA CLARA GOLD AND SILVER MINING COMPANY.—Location, Amador county, Cal. Trustees: Eli Rundell, H. D. Coon, Thomas W. Leggett, F. M. Rundell, G. P. Melville. Capital stock, $175,000.

ANDES MINING COMPANY.—Location, Gold Hill District, Storey county, N. T. Capital stock, $160,000 in 800 shares of $200. Trustees: Robert Apple, G. H. Maynard, Geo. O. McMullin, T. C. Sanborn and W. R. Cook.

CRYSTAL MINING COMPANY.—Location, Santa Catalina Island. Trustees: Wm. J. Woodley, S. C. Gardner, George Gibbons, Edward H. Baxter. Capital stock, $100,000.

ACACIA GOLD AND SILVER MINING COMPANY.—Location, Trustees, and Capital same as above.

TRUE AMERICAN MINING COMPANY.—Location, etc., same as above.

LIVE OAK GOLD AND SILVER MINING COMPANY.—Location, Lander county, N. T. Trustees: A. M. Huy, W. D. Robertson, D. T. Berry, W. A. Thornburgh, Werner Phillips. Capital stock, 160,000.

MERRIMAC GOLD AND SILVER MINING COMPANY. — Location and Trustees same as above. Capital stock, $80,000.

BADGER GOLD AND SILVER MINING COMPANY.—Location and Trustees same as above. Capital stock, $100,000.

BEN HOLT GOLD AND SILVER MINING COMPANY.—Location and Trustees same as above. Capital stock, $160,000.

Information Furnished.—Miners, Mechanics and others desiring information upon any subject relating to inventions and discoveries, or the principles of mining, mechanism, chemistry or natural sciences, by addressing us will receive answers to their enquiries, either through the columns of the PRESS—or by private letter, in accordance with the best judgment and information we can obtain.

Patent Office Department.

Treating Sulphates of Copper, Cobalt and Nickle to Obtain their Chlorides.—Heretofore, says the *Scientific American*, it has been customary in the separation of two or more sulphates, to use the difference of temperature or concentration of a solution and let it chrystalize: but the sulphates of copper, cobalt and nickle, the separation of which cannot be effected by chrystalization, nor by the usual mode of separation employed for these metals—have been precipitated by the addition of lime or other reagents, and then dissolved in muriatic or other acid, so as to obtain those metals as chlorides, in which form they are easily separated. The object of this invention is to obtain the chlorides of those metals in a more economical manner, and to this end it consists in the treatment of the sulphates by the use of chlorides, of sodium or other compounds of chlorine, such as chloride of potassium, of calcium, of magnesium, of strontium and the hypochlorites of lime, potassa or soda; but especially the chloride of sodium, because of its cheapness and the readiness with which it may be obtained. Alfred Monnier, of Philadelphia, Pa., is the inventor of this improvement.

Improved Printing Press.—Mr. Charles Potter, Jr., of Westerly, R. I., has recently added and patented important improvements to his machine press, which is now known as "Potter's Improved Printing Press." Throughout the numerous channels in which American inventive genius has displayed itself, there are few directions in which it has accomplished more beneficial results then in its efforts to aid in bringing to perfection the machine printing press. To such perfection has this class of machinery been carried that what formerly required the labor of a man and a boy for a day is now run off by a boy alone in an hour, and in much better style than it could possibly have been done by the presses in use thirty years ago—and the end is not yet.

An Improved Quartz Mill.—A. Hitchoock, of New York, has recently patented an improved Chili mill, for grinding quartz, etc., which certainly appears to possess many advantages over any mill of that description yet offered to the public. Practical miners, we believe, almost universally admit that the Chili mill will give a greater yield of gold to the ton of rock, than any other process of working. The only objection is that it is too slow in its results. The heaviest wheels used in the ordinary Chili mills weigh about three tons, but even that weight is not sufficient to crush the particles of quartz sufficiently fine until after the wheel has been made to pass over them several times. To accomplish the desired result at one crushing and thus hasten the process would require wheels of too unwieldy a weight to make them at all feasable, with the ordinary manner of procuring them. Mr. Hitchcock has endeavored to remedy this defect by placing a circular plate upon the top of these wheels and attaching the driving power directly to this plate, which in revolving carries the wheels with it, the power being transferred through this revolving plate to the periphery of the wheels. Any desirable weight can be given to the wheels by placing weights upon the upper surface of this revolving plate. This machine is illustrated in the *Scientific American* of November 14, 1863.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partinily resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified, to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months	$10 00
On every application for a design, for seven years	15 00
On every application for a design, for fourteen years	30 00
On every caveat	10 00
On every application for a patent	15 00
On issuing each original patent	20 00
On filing a disclaimer	10 00
On every application for a re-issue	30 00
On every additional patent granted on a re-issue	30 00
On every application for an extension	50 00
On the grant of every extension	50 00
On appeal to the Commissioner from Examiners-in-chief	20 00
On every appeal to the Judges of Circuit Court, D. C.	25 00

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulched in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appea from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal, and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Patent Claims.—We will furnish, on application, the claim of any invention that has been patented within the last fourteen years. The name of the patentee, date of patent, when known, and two dollars for copying, should be sent.

Back Numbers.—We have a limited number of past volumes of the Press on hand, which will be sold, neatly bound, at reasonable rates. A portion of the back numbers of the paper can be had by the single copy.

on the opposite side of the river on another vein, is the

INDIAN BAR.

It contains 1,500 feet divided into ten shares. For magnificent croppings, openings and thickness of vein on the surface, this claim beats everything I have yet seen. The rock is also of good character and pure—in fact a profusion of mundic, sulphuto of iron copper pyrites and yellow sulphurets. At the end of the tunnel, where it has assumed its regularity of course, it is perfectly defined with both walls, and a vein some four feet thick. Work suspended till Spring. The next, a little way east of south is the

BELL RING.

It contains 3000 feet divided into 3000 shares. It is on another river, showing itself here almost as prominently and well as the above one. The tunnel, for some reason has been run parallel with the lead, but at the end where they turned to cut the vein the rock looks healthy and promising. At this particular spot I do not think a tunnel is good policy. Work suspended for the present. Some half mile east, near the river, is the

WASHINGTON.

It contains 2,400 feet in single foot shares. Tunnel some 200 feet, showing at the end a small vein ten or twelve inches thick with a good mineral slate.

Many of these claims, are sadly neglected for want of capital. Some of them are so promising it seems almost *sinful* to leave them in such an undeveloped condition. When a few more Santiagos burst like bomb-shells amongst us, men of wealth will become sensible, and find nearer home better and safer investments, than all the distant mines can present. I observe here that the miners allow 1000 feet width to their claims, instead of three hundred as generally allowed elsewhere. If this arrangement is intended only to secure parties against losing ground through error in running their lines, and not to embrace a right to *another* vein it may chance to overlap, and often will, it will work well, otherwise it must ultimately cause serious difficulties. This point should be understood at once by all parties.

It was here on the open level in front of the Crimea, that the great international fight between the Chinese took place a few years ago, Some 1500 men marched in battle array against each other on that terrible day. How to keep out of harms' way. I am told, was the grand principle of strategy. When the balls began to fly about, the dense crowd of "Mellican Man" began to fly about also, making according to the record I saw, the *quickest* time in running ever known. Finally victory sat on the banner of Canton, having killed the Hong Kong chief, who singularly enough was the only man hurt, though dressed in coat-of-mail from head to foot. In imaginary security, this brave sought distinction, but found death; and in his fate we read the history of many men. As the fight arose out of a mining dispute, I thought it might not be considered inappropriate to record it. The official account prepared by the victors, and now at the Crimea House, is amusing, short and graphic, it runs thus. "Hong-Kong head man, him killed, welly good; one Mellican horsey killed by chance, no good; Cantoa man pay three hundred dollar him, no good John; Mellican man lie, horsey no worth so muchee; Mellican man, beat Hong-Kong man in runaing likeo debil whea shootee begin; Canton man welly good. Signed Ah Koag, Canton Chief."

I once more tender my acknowledgments to Mrs. Brown's family, and also to Dr. Clarke for civilities since offered. L. H.

IMPORTANT ADMISSION.—The London *Times* says that the American fleet of iron-clads is the strongest in the world, and more numerous than the squadrons of all other countries put together.

PRIVATE New York telegrams mention an important rise in the value of iron bolts there and in England, quoting bar iron in New York at $129 per ton.

[Written for the Mining and Scientific Press.]

Reese River Correspondence.

AMADOR CITY, Dec. 30, 1863.

EDITORS PRESS.—You will observe I date my letter from a new city; a part of which was called Coral city, but which is "*de facto*," the town. It seems there is a dispute between the locators, and by tacit, or public consent, the town is divided. Thus we have two cities side by side, and the difference is without a distinction, only on paper, for Amador has most of the population. Taking them together, they are said to be larger than Clifton, and growing rapidly, considering the season. The weather has been mild until a day or two past; but winter has asserted its sway in spite of canvas houses and sage brush, to the no small discomfiture of many of the less fortunate, badly housed individuals.

It is but the bright, silvery visions of the future that can lighten the burthen of a miner's life, among the cold bleak mountains of Nevada, or keep the blood above the freezing point under the "canvas" and "bacon." What will not men endure for promises of rich reward?

This is now a district of itself, cut off from Reese river on the 15th inst. At the same time, a new recorder was elected, and seven hundred votes were polled. This shows up well considering that in the spring there were hardly ten buildings in this section of the country. The Amador still holds its own, while many other ledges are daily discovered quite as promising. In the Coral ravine, running up the mountain Easterly, there have been many lucky claims made during the past two weeks. At the mouth of this ravine, is the "Coral mine," a large ledge of the Amador class, which is being worked with vigor. The next beyond is the "Belmont," situated on the the same side of the ravine, which is considered first class; though I observed considerable slate intermixed with quartz. It is well defined, and from appearances, I was very favorably impressed. On the same side, farther up, is the "Rough and Ready," opposite of which, across the ravine, is the "Oakland;" both look well. The "Ivanhoe," is back of the Belmont, quite a distance up the ascent. I did not visit this mine, but was informed that it showed up good. Almost to the extreme end of the ravine, is the "Old Hickory," of which I had heard a good deal said, and which, too, I found to be exceedingly promising. There are many other claims upon which I saw men working, but I could not note them all at one visit, so I must defer it until some future day.

The Amador company is running a tunnel into the hill south of their mine, in hopes of finding their own ledge, as well as other blind ledges that may fall in their way, although full five hundred feet, including a small ravine, intervenes. The "Wild Wood Tunnel Company" has opened work but fifty feet South of the Amador company, and it is a race between the two for the blind ledges; consequently, both work three shifts of hands, day and night. At the present writing, the "Wild Wood" is about 20 feet in the advance, being already 60 feet in the tunnel.

The "General Banks" is still a favorite, but work is progressing slowly. They have filed their papers for incorporation. Beyond this, about one half a mile, is the "Batavia Ledge," on the same incline with the Amador, which looks as though it might be the true North extension. As but little work has been done on it since its recent discovery, its worth can hardly be defined. There are so many assumed extensions of the "Amador," that one would be bewildered in hunting the original by following any of these leads: unless, like the Batavia ledge, they are located on the same bench and of uniform distance from the plain below. The ledges all seem to run parallel, a small distance apart, and it is no stretch of the imagination to fancy they might and do bend a little up or down the mountain, so as to accommodate each particular owner's interest, and emerge into, or form a part of the Amador ledge.

The mills at Austin are again at work, and, as I learn, are giving better satisfaction. Brady's mill is working second class rock from the Yankee Blade district, Whitlach company, which is yielding $150 per ton. At Brooks' mill some pulp which had been worked there, assayed, to my certain knowledge, $780 per ton. I do not know from what mine this came, but since the complete renovation of the mills, there seems to be greater results, which has established to the mind of the skeptic, a truth which he had heretofore grappled with gloved hands, and which he now accepts as self-evident—that the mines of Reese river will be a paying institution.

About political matters I may as well add that I have yet to see the first individual who is in favor of the Constitution, to be voted upon on the 19th of January. The great objection is the mining clause embraced therein, taxing equally the unproductive with the productive mines.

After January 1st we shall have a post office in Austin for the first time. This has long been needed, for it was an intolerable nuisance to climb the hill between this place and Clifton on our return from the post office there.

Union district is attracting considerable attention among the miners just now; and were it not for the Amador district, there would be a general stampede for these more Southern mines. As it is, a good many are going and coming, who bring very encouraging reports of their extent and richness. From specimens brought in from that district, I believe their report will be found without exaggeration.

'Tis said that "Yankee Blade" is turning out some splendid rock which is being worked with satisfactory results. I hope it is so, for the benefit and reputation of the mines, as well as that district. They have stuck to it, through good and evil reports, and now are likely to be rewarded for their perseverance. We are all anxiously waiting to see your enlarged edition. Artemus Ward is expected to lecture here the night of the first, on the "*Babes in the Woods*." Hope he will tell us where to find them, as they are a mighty scarce article in this section. Trees are also scarce. B.

A PROPHECY IN JEST.—The following paragraph from a burlesque article in the New Monthly Magazine for 1821, Vol. 2, entitled, "Specimens from a prospective newspaper, printed A. D. 4796," is somewhat curious at this time:

"The Army of the Northern States (of America) will take the field against that of the Southern provinces, early next spring. The principal Northern forces will consist of 1,490,000 picked troops. Gen. Congreve's new mechanical cannon was tried last week at the siege of Georgia. It discharged in one hour 1,120 balls, each weighing five hundred weight. The distance of the objects fired at was eleven miles, and so perfect was the engine that the whole of these balls were lodged in a space of twenty feet square." A subsequent article in this specimen states that, "by means of a new invention, Dr. Clark crossed the Atlantic in seven days."

How little did the writer of the above paragraph anticipate that in forty years these, to him, wild fancies, would be so closely realized.

ENTHUSIASTIC.—Some enthusiastic genius writes as follows to the Denver *News*:—

"Close to the former Capital of our Territory you come near that oft described "Garden of the Gods," where birds of Paradise in past time were supposed to chirp on grease-wood boughs, and where future Pike's Peak Paulines may be expected to live and luxuriate while listening to loving set-speeches from the honeyed lips of Coloradan Claude Melnottes. This romantic, fairy-like, rock-fenced garden appears at present, however, without either gods or garden nymphs, and its herbaceous labyrinths and moss-covered walks as yet are not fringed with perfume-breathing bowrets. True lovers' knots are not yet observable within its velvet-carpeted summer-houses, nor chanted Te Deums audible before its altars and classic caves."

ANNUAL ELECTION.—The annual election of officers for the Mercantile Library Association takes place on Monday, Jan. 18th. Polls open from 9 A. M., to 5 P. M.

Price of Gold in New York.

Thursday, January 7th—quoted at $151⅛.

Mechanics' Institute Lectures.

A COURSE OF THREE LECTURES WILL BE DELIVERED before the Mechanics' Institute at Music Hall, by the following named gentlemen, who have kindly volunteered their services:—

Professors BREWER and WHITNEY, of the State Geological Survey, and Rev. T. STARR KING.

The Lectures will be delivered as follows:—

THURSDAY EVENING, January 14th, 1864, by Professor Brewer. Subject: Mountain Scenery of California.

THURSDAY EVENING, January 28th, 1864, by Professor Whitney. Subject: ——

THURSDAY EVENING, February 11th, 1864, by Rev. T. Starr King. Subject: ——

Single Tickets, $2; Tickets for Gentleman and Lady, $3.50; Tickets for the Course for a Gentleman and Lady, $4. 2-tf

CROCKER'S
STOCK and ASSESSMENT LEDGER.

Copyright secured.—Price $10.

The necessity of a proper book for keeping the Stock and Assessment accounts of Corporations has long been very much needed. One that would combine economy and simplicity, and would not require the services of an experienced book-keeper to keep the accounts correctly. CROCKER'S STOCK AND ASSESSMENT LEDGER has met this requirement; we have submitted it to several Secretaries of corporations, and they acknowledge that the plan is admirable, and just what has long been wanted. The printed headings are a perfect explanation of the manner of keeping it; and any person, whether they understand book keeping or not, cannot make an error in the accounts. The Stock and Assessment accounts are so arranged that the Secretary can in a moment tell how any stockholder's account stands, both in regard to Stock and Assessments. He can also, with the greatest ease, trace any certificate, through any number of transfers, to the original one issued. It saves a great amount of labor, as it does not require one-fourth the writing of the ordinary method. It dispenses entirely with the old style of Stock Ledger, Stock Journal and Assessment Book, all three of which Secretaries have heretofore been obliged to keep, condensing the whole in one book. To a person who is Secretary of several companies, this book will prove invaluable, and we feel no hesitation in guaranteeing satisfaction to those who may order them. Specimen sheets sent to those who desire to examine it. The books are ruled with one or two accounts to the page. State which is preferred.

Published and for sale, wholesale and retail, by

H. S. CROCKER, & CO.,
Book and Job Printers, Sacramento.

CERTIFICATES and complete sets of books for Corporations, in the finest style, at short notice, and low rates. 7-1m

WM. H. MEAD, THEODORE VAN TASSEL

MEAD & VAN TASSEL,
HATTERS,

Montgomery St., corner of Commercial,

SAN FRANCISCO,

TO OUR FRIENDS AND THE PUBLIC GENERALLY:—HAVING purchased the entire interest of MESSRS. FISHERS & Co., in this city, we shall, on the 1st. day of May assume the management of the

HAT EMPORIUM

so long conducted by that firm.

MR. WILLIAM H. MEAD, for the last seven years salesman with Messrs Fisher & Co., respectfully solicits a continuance of the patronage so long and liberally bestowed upon the old House, feeling entire confidence in our ability to suit in every particular.

MR. THEODORE VAN TASSEL, for eight years with Messrs Le Gay & Co., would be pleased to see his friends at his new place of business.

The long practical experience of Messrs. Mead & Van Tassel in the Trade justifies them in saying that their work cannot be excelled either in finish or durability. Having perfected arrangements, we shall be in constant receipt, by every steamer, of soft goods of the very finest of FRENCH AND AMERICAN MANUFACTURE. Our Stock on hand is superb.

Call and examine, and judge of the merits of our claim to the title of "LEADERS OF FASHION."

Respectfully,
MEAD & VAN TASSELL.

Copper Mining in Canada.

The Stockton *Independent* contains the following very interesting letter from an old Californian who spent several months last summer visiting the Copper Mines of Canada :—

There appears to be three great copper bearing belts running through Canada East, parallel to the St. Lawrence, on the first of which is the Acton, Wiekham and Durham. The ore is chiefly in limestone. On the second is the Harvey Hill, Halifax and Sutton. The ore here is found in slate. The third includes the Ascot, the Ham and the Garthby mines. The ore is in slate, and much mixed with calespar. There are many others not so well known and developed, but to all appearances just as rich and extensive.

There are no true veins discovered in this region. Faom the surface indications tbe first prospectors were led to suppose that they were the "outcrop" of what would be at a requisite depth, a regular well defined lode. But they have always proved "lenticular masses" or interstratified beds." The lenticular masses are detached masses of very rich ore, having nearly the form of double convex lenses; they are supposed to occupy what were once fissures in the rocks, and to be the product of seggregation. They are often quite large. 100 tons of 40 per eent ore have been taken from one of them. It is from the interstratified beds that the majority of the ore is taken. The ore exists as the name denotes, in thin laminæ, or in grains diffused through the rock. It is worked when it is only two per cent., but it generally is from three to three and a half. The ore is principally tbe purple sulphuret, although almost all kinds exist in some mines. I spent two days at the famous Acton mine, and through tbe kindness of the agent and Captain Williams, I had a good opportunity of seeing it. The large amounts of rich ore which was taken out by the first owners, gave an impetus to mining, and was the cause of the discovery and development of many new ones. It is situated on the Grand Trunk Railroad, 50 miles from Montreal, and 240 from Portland, and is one of the largest and most productive mines in this region, giving employment to 500 men. It is owned by the South Eastern Mining Company, which was organized October 28th, 1862. The capital stock of the corporation is one million dollars, divided into two hundred thousand shares of five dollars each The stock is mostly owned in Boston and New York, as is most of the other stock. The operations at this mine previous to the purchase by the present company were not of a scientific nature. Large masses of rich ore were found near the surface, which was dug out without regard to the manner of leaving the ground, and when the debris had collected to an inconvenient extent, new openings were made, so that tbe older parts of the mine resemble n quarry rather than a mine. The present company have expended, and still are expending, large sums in prospecting the grounds, sinking shafts, and in machinery and buildings; and, although they put into market a large amount of ore, (from 300 to 350 tons per month, averaging fourteen per cent.,) their outlay is equal to their income. Much of this is for dead work. In the future the amounts spent now will yield a return. The mine may be said to be in a prosperous condition. The total sales of copper for the year ending Sept. 30th, 1863, amounted to $230,629.

It may be a proper question to ask how will these mines compare with those of California, as the ores will be in competition with your products. They have many advantages. Labor is quite cheap—mechanics from $1 to $1 50 per day; miners, 75 to 80 cents per day; boys, 30 to 50 cents, exclusive of board. Machinery is less expensive. And lastly, but by no means least, capital is abundant, the wealthy men of Boston and New York have taken hold of these mines. To counterbalance these, their ores are of a low per cent., and require much labor in dressing them up to a profitable per cent., to smelt. The veins are not true veins and consequently more uncertain.

Another important mine is the Harvey Hill, situated about 46 miles south of Quebec, and about 31 miles from the Station, on the Richmond and Quebec Railroad. This mine was opened in 1858, and has been worked in a very scientific manner up to tbe present time. The object kept in view being to explore and prove tbe mine. Rather than to take out ore. Sixty men have been employed, on an average, since the commencement. They have five shafts, and an adit 248 fathoms into the hill. The expenditure upon this mine has been $200,000 while the ore sent to market has been $50,000. The following estimate of the cost of ore from this mine, delivered in Boston is, I think, correct. Cost of getting out and placing on dressing floor, including a proper portion of the expense of drifting and exploring necessary to reach the ore, $4 per ton; dressing, $2 to $3 per ton; barrels holding 500 pounds, 30 cents; $1 41 per miner's ton, 2,352 pounds; freight to Railroad, $9; to Boston, $6. This estimate will do for the Acton mine, deducting the freight to the road.

The Ascot is in the town of Lennoxville, three miles from the station and 190 miles from Portland. The ore is mostly yellow Sulphuret of a rather low grade, about 3½ per cent. The company have established smelting works near the railroad. The chief advantage they have is in the good fluxing qualities of their ore, carbonate of lime being combined with it in the form of calc spar. They have made arrangements with the Acton and other mines to purchase their ores. They reduce them to 40 or 50 per cent regulus and ship it to the Bergen Port Copper Company, near New York, thus making a great saving in freight. They are building large smelting works, and will probably be able to reduce all the ores produced in this part of Canada.

Short Paragraphs.

—The winter has thus far proved exceedingly mild throughout California and its neighboring territory.

—Upwards of thirty-five babies were born in the small mining town of Port Wine last year.

—The Sacramento *Bee* has commenced its eleventh volume.

—F. E. R. Whitney has again been elected President of the S. F. Dashaway Association.

—$200,000 in bullion was received in this city from the mines, last Saturday.

—Mr. Samuel Brannan is preparing a grand summer resort at Calistoga Springs, Napa Valley.

—Kamehamaha, King of the Sandwich Islands, died on the 10th of December. He was 27 years of age. An elder brother succeeds his reign.

—No less than eight editors and publishers of newspapers have died in this State and Nevada Territory during the past twelve months.

—Mons. H. Zeeck, formerly of Gilroy, died in Virginia City on Sunday, after an illness of a few hours only.

—It is said the Baker & Crosby Copper claim at Whisky Diggings, Placer county, is now selling at $100 a foot.

—A man named Hickman, from Yreka, was lately killed by Indians near Washoe Ferry, on his way to the Owyhee mines.

—The corner stone of the new Masonic hall in Marysville was laid with due ceremonies on New Years Day.

—A man who registered his name as C. Kennett, was found dead in his bed at the What Cheer House, in this city, on Sunday morning last.

—Geo. Berge was killed by falling into a mining shaft, at French Bar, East Branch of Feather river, Dec. 7th.

—One of the largest barns in the State, belonging to Mr. Hoag, of Mayfield, Santa Clara county, was destroyed by fire on the night of the 3d.

—Copper was quoted in New York on the 8th of Dec. at 30 cents. Dec. 9th.—Refined Ingot is in fair demand, and firm at 37½@39c ₱ lb.

—The *Alta* says that bogus twenty-five cent pieces are in circulation in this city. Several bogus silver mines have doubtless reached a dividend.

—Hunter died on the 30th of December in the Virginia hospital, from wounds received in a duel with Capt. Pitcher—his fashionable murderer.

—The Golden Age, on Monday, carried a treasure amounting to $1,797,792,81, an excess of $310,430,-90 over the corresponding shipment of last year. She took about 70 passengers.

—Johnny Hollis and Fillmore Bothell, were drowned at Lancaster, N. T., recently, by breaking through the ice. The Humboldt *Register* says both were favorite lads.

—The French bark Harmonie, for Callao, recently carried from this port 400 flasks Quicksilver, 62 pkgs Tallow, 240 pkgs Fire Crackers, 225 pkgs Tea, valued at $21,200.

—According to the Butte *Record*, the copper mines, the agricultural capabilities, the tanning and turpentine resources, and accessibility to the Humboldt and Boise regions will eventuate in making Butte county the wealthiest in the State.

—The Branch Mint in this city was re-opened for business on Tuesday.

—Petaluma is to be supplied with a Hunneman (Boston) Fire Engine.

—Commodore O. H. Perry's watch has been found in Iowa. It is a heavy, bulbous, English affair, and is inscribed, "Presented to Oliver A. Perry, by his father. 1804."

—The Stockton *Independent* states that sufficient rain has not yet fallen to enable the farmers in San Joaquin county to engage in seeding with full confidence of successful crops. Other counties of the State have been more favored.

—The remains of Peter E. Place, who has been engaged in command of a steamer in the waters of China, were recently brought to this city and interred with Masonic honors. Mr. P. was formerly a machinist at the Vulcan Iron Works.

—The Gregory Gold Mining Company of Colorado has been organized in New York, with a nominal capital of $1,000,000, and a Board of Directors embracing some leading capitalists. The day is not distant when Eastern capital will become largely interested in our mines.

—A writer says—"honest miners were of the past. Those of the present day have not inherited the virtues of the forty-niners." We would remind him there is a vast distinction even at this corrupt period between him who wield the steel pick and those who shuffle stocks and pick and steal.

—The crowning section of the statue of Freedom has been raised to its position on the top of the dome of the Capitol at Washington. The statue is of brouze, weighing more than seven tons, and although colossal in size, being about fifteen feet high, its appearance is only of the ordinary size of the human figure, owing to its altitude from the pavement.

—Some short sighted individuals have given their opinions that mining notices required to be published for 30 days, must be issued 30 successive days. The idea is a preposterous one. It would invalidate all publications made in such dailies as make but six issues per week. Nor is there a general State or Territorial law concerning the publication of mining notices rendering it necessary that they be published in a daily instead of a weekly paper.

Treasure from Virginia City.—The Virginin *Enterprise* of January 3d says: During eleven days three claims in this district shipped $275,000 in bullion. Of this amount $185,000 was from the Gould & Curry, $50,000 from the Opbir, and $40,000 from the Savage.

Proposed Woolen Factory at Napa.—Several prominent citizens of Napa are taking steps to organize a joint stock woolen factory in that town.

The Viceroy of Egypt, who sowed about 4000 acres last year in cotton, is said to have planted 19,000 this year, and to have offered to supply the people gratuitously with seed. He hopes next year to see 70,000 to 100,000 acres under cultivation.

Reading without purpose is sauntering, not exercise. More is got from one book on which the thought settles for n definite end in knowledge, than from libraries skimmed over by a wandering eye. A cottage flower gives honey to the bee; a king's garden none to the butterfly.—*Bulwer.*

Value of Pure Air.—The steamer Londonderry left Liverpool for Sligo on Friday, December 2, 1848, with two hundred passengers, mostly emigrants. A storm soon came on. The captain ordered the passengers into the steerage cabin, which was eighteen feet long, eleven wide, and seven high. The hatches were closed, and a tarpaulin fastened over the only entrance to the cabin. The poor creatures were now condemned to breathe the same air over and over again. Then followed a dreadful scene. The groans of the dying, the curses and shrieks of those not yet in the agonies of death, must have been inconceivably horrible. The struggling mass at length broke open the hatches, and the mate was called to gaze at the fearful scene. Seventy-two were already dead, many were dying, their bodies convulsed, the blood starting from their nostrils, eyes, and ears. It does not appear that the captain designed to suffocate his passengers, but that he was simply ignorant of the fact that air which has passed to and fro through the lungs becomes a deadly poison.

Departure Postponed.—The sailing of the steamer *Sierra Nevada* for Cape St, Lucas, Mazatlan, Guaymas and La Paz, Lower California, has been postponed to Monday, January 11th., 3 P.M.

Miscellaneous Advertisements.

INTERNATIONAL HOTEL.

Jackson Street..... .....San Francisco,

[A FEW DOORS ABOVE MONTGOMERY.]

Fire-proof Brick Building. Most convenient to the Steamer's Landing. Business sts. and places of Amusement. Open all night. City Railroad Cars Pass the Door.

Reduction in Prices.

FINE BATHING ROOMS ATTACHED TO THE BARBER SHOP. Warm and Cold shower Baths Free to Guests. Thoroughly renovated and newly furnished this Spring. Every room opens to the Light and Air. Each room is furnished with a first quality Patent spring Bed and Hair mattrasses. The International offers to guests the greatest number

AND BEST FURNISHED FAMILY ROOMS;

And SETS AS GOOD A TABLE as any House in the City.

I am determined that the INTERNATIONAL shall be the most comfortable, best regulated, and in all respects superior to any like establishment in the State, and shall aim to merit a continuance of the popular favor it has enjoyed heretofore. It will be conducted on Temperance Principles.

1-tf F. E. WEYGANT, PROPRIETOR.

TREMONT HOUSE.

418 and 420 Jackson Street [a few doors below Montgomery,]
SAN FRANCISCO, CALIFORNIA.

THIS FINE, FIRE-PROOF BUILDING OFFERS MANY ADVANtages to the traveler for convenience. It is only half a block from the Post Office and Custom House, and about the same distance from the principal places of Amusement.

The City Railroad Cars pass the Door. The House is conducted on Temperance Principles, which secures to our guests QUIET.

The prices for board and Rooms are very moderate—by the day, meal or week. WE SOLICIT A CALL FROM ALL.

F. E. WEGANT, Proprietor.

For the accommodation of my many guests I have taken and refurnished the INTERNATIONAL HOTEL, and will carry on the two houses in connection, so that travelers wishing to put up at either house, may take the Tremont or International Hotel Coach and be taken to either House with their baggage, FREE.

tf. F. E. WEGANT.

Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased.

COPPER ORES—Highest market rates advanced in cash, for Shipments. S. C. BRADSHAW, Agent,

509 Sacramento street, near Sansome.

HEPBURN & PETERSON'S.
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machines now in use for producing similar results. This fact is attested to by their general adoption and prefcrence at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

nov8 3m* HEPBURN & PETERSON.

The Pacific Mineral Company

MAKE LIBERAL ADVANCES

UPON THE ORES OF

Copper, Silver, Tin, Nickel, Cobalt, Zinc, Lead, and Sulphurets—containing Gold.

DUE ACCOUNT TAKEN OF ALL VALUABLE METALS COMbined with Silver and Copper Ores, and advances made therefor.

Parties owning undeveloped mines and desiring Capital to prospect the same will receive assistance, if, upon examination, such leads are deemed sufficiently valuable to justify such expenditure.

All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.

HOWLAND, ANGEL & KING.

San Francisco, February 23, 1863. tf.

50 lbs. MARINE AND
FIRE-PROOF PAINT,

MANUFACTURED BY THE PACIFIC METALLUROICAL Works in the city, for Hulls and Decks of Vessels, from ground Mineral Rock, contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper; no worms will ever effect it, and it is cheaper than any other paint.

DIRECTIONS.—For Deck of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed oil.

For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint; mix with Coal Tar and apply it hot.

For sale by all Ship Chandlers and tradesmen, in boxes of fifty pounds each, or by the Pacific Metallurgical Works.

25 lbs. FIRE-PROOF PAINT.

When used on Roofs, Buildings, or Fences it is equal to covering them with a coat of Stone, being perfectly Fire-Proof, and costing less than any paint.

DIRECTIONS.—House—Mix three parts Mineral paint with one part white lead; mix with Linseed oil. If a lighter color is wanted, mix less paint, more lead.

ROOF.—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a Tin Roof, as one coat when properly applied will last three years.

S. C. BRADSHAW, AGT.

G. T. FOUQUE, Superintendent.

Mammoth Consolidated Gold & Silver Mining Co., Excelsior District, N. T.—Office 528 Montgomery St., San Francisco, Nov. 18, 1863; Notice is hereby given that there will be sold at Public Auction, at the office of the Company, in San Francisco, on Saturday January 9th., 1864 at 12 o'clock, M., of that day, to the highest bidder, for cash in U. S. gold coin, so many Shares of the Capital Stock of said Company standing in the names of the following shareholders as will be necessary to pay assessment No. 1., of ten (10) cents per share, duly levied thereon by the Board of Trustees on the 9th. of May, 1863; also assessment No. 2., of thirty (30) cents per share, duly levied thereon by the Board of Trustees on the 27th of June, 1863, together with all the expenses of advertising and sale, unless said assessments are previously paid to M. G. Elmore, Sec., San Francisco, or to W. H. Dalrymple, Financial Sec., Aurora.

By order of Board of Trustees.

M. G. ELMORE, Secretary.

The above sale is postponed until Saturday, January 30th. 1864, at the same place and hour. By order of the Board of Trustees.

2 M. G. ELMORE, Secretary.

Mining and Scientific Press.

A Mining Journal--Devoted to News, Art, Science and Progress.

VOLUME VIII. SAN FRANCISCO, SATURDAY, JANUARY 16, 1864. NUMBER 3.

A PATENT STONE BREAKER.

The machine illustrated by the annexed cuts is known as "Blake's Stone Breaker," and has recently been patented in the United States and several foreign countries. It is designed to break stones into small fragments, without pulverizing them to any considerable extent. It is powerful yet simple and compact, not liable to get out of order, and a most efficient machine for the purpose for which it is designed. Although intended chiefly for crushing rock for road making, it is most admirably adapted for crushing the poorer class of copper ores previous to the process of assorting.

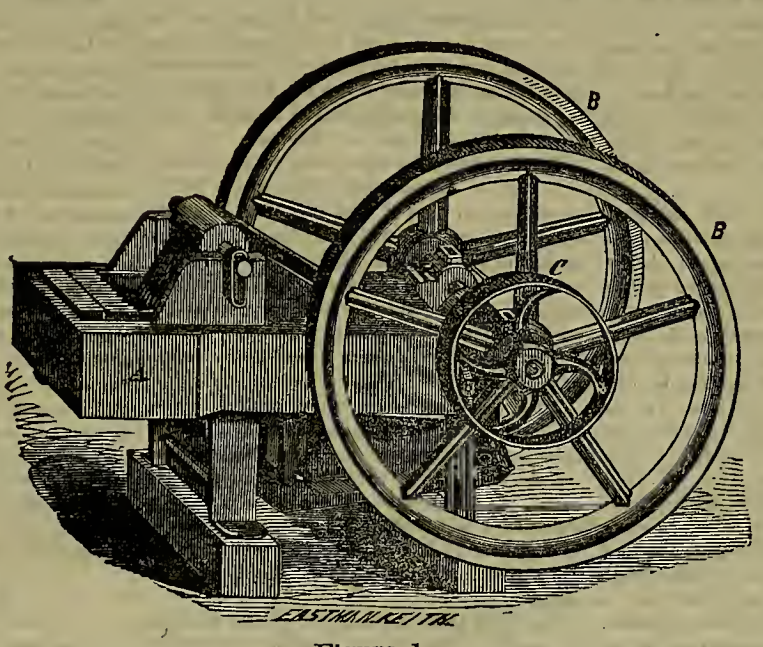

Figure 1.

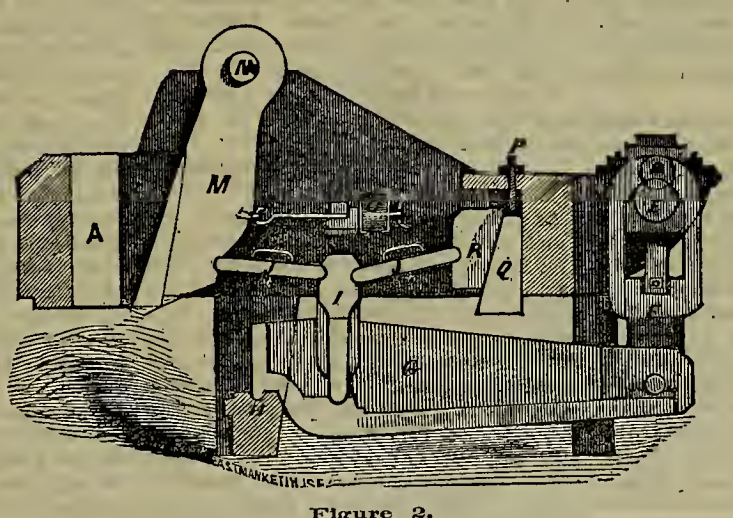

Figure 2.

Figure 1 is a perspective view of the machine entire. Figure 2 shows a side view, or elevation of the effective portions of the machine.—M is a moveable jaw which is made to move forward and back by the working of the toggle joints J J. Every revolution of the crank causes the lower end of this jaw to advance toward the fixed jaw about ¼ of an inch. Hence if a piece o rock is dropped between the convergent faces of the jaws it will be generally reduced to the size at which they are set at their lower extremity. The distance between the jaws at that point, limits the size of the fragments, and this limit, and consequently the size of the fragment may be regulated at pleasure.

From the above description, the peculiar adaptability of this machine to the reduction of refuse copper ore to the size required for ready concentration, must be apparent to all copper miners. Mr. Lemuel Hubbard, of this city, is agent for California and the Pacific coast.

California Agricultural Society.—The General State Agricultural Convention for the election of officers, for the ensuing year, and for the consideration of subjects connected with the objects of the society and the advancement of the material interests of the State, will be held at the Pavilion in Sacramento, to commence on *Tuesday, the 26th inst.* We are pleased to observe, from the circular of the Secretary, Mr. Hoag, that the prospects of the society are in a most flattering condition. The debt has been reduced the past year over seven thousand dollars, with an appropriation from the State of less than half that received in each of the two preceeding years. We trust a full delegation will be in attendance upon the day of election.

THE MECHANICS' INSTITUTE LECTURES.

The first of the present series of lectures announced by the San Francisco Mechanics' Institute, was delivered on Thursday evening last at Platt's Hall, by Professor Brewer, of the State Geological Survey. The Professor selected for his theme "The Mountain Scenery of California," a subject with which the lecturer was perfectly at home; his connection with the survey having rendered him familiar with much of the grandest and most picturesque scenery of the State. The speaker made numerous and very happy points, which were appropriate and well received by the audience. He contrasted the scenery of the Sierra with that of the Alps, and drew comparisons highly advantageous to California. He said that thousands would cross the Atlantic in search of scenery and climate that is far excelled upon our own shores. The attendance at the lecture was very fair, and the audience evinced much interest throughout the evening. The number of tickets sold for this lecture alone was about 700, in addition to which about four hundred dollars has already been realized from season tickets. The series of lectures has been fairly and favorably inaugurated, and may be looked upon as a decided success. The receipts in excess of printing and hall expenses are to go towards liquidating the indebtedness of the Institute. The services of the Secretary are gratuitous. The object, aside from the literary treat presented, is well worthy the patronage of our citizens.

The Mechanics' Institute is one of the most important associations connected with the progress of this city.

The Colorado.—Articles of incorporation were filed on Wednesday last by the "Colorado Steam Navigation Company," with a capital of $500,000.

Communications.

[Written for the Mining and Scientific Press.]

Copper Districts of the Colorado.

Editor Press:—As copper mines and Copper mining have assumed such large proportions on this coast within the last two or three years, it is very natural for the public to desire all the information relating to copper mines that can be obtained. Having spent several months on the Colorado, exploring the mineral ranges near that river from the head of navigation, down to La Paz, (a distance of about two hundred miles,) I will give such facts in connection with copper mines as came under my personal observation.

There are three facts upon which the value of copper mines depend; first, the *quality* of the ore; second, the *quantity;* and third, the *location* of the mine in relation to navigable waters. With these facts in view I confined myself to the neighborhood of the river, including the slope of the mountains on each side for a distance of fifteen to twenty miles, well knowing that a rich mine located in a desert remote from water transportation could be of no practical value. In ascending the river from El Dorado cañon the first place that copper has been found in workable quantity is the Erataha District, situated about twenty-five miles south-west of Fort Mojave, and varying from six to fifteen miles west of the river.

This district is well situated for work and transportation, having easy grades from the mines to the river bank. The quality of the ore is good; the carbonates, oxides and gray sulphurets are the predominating varieties. The quantity of ore cannot yet be approximated, but from the appearance of the croppings, I should judge that quite a number of veins will yield good ore in sufficient quantity to make them very profitable to the lucky owners. The majority of the claims are located by the officers and men composing the command of Capt. J. Ives Fitch, stationed at Fort Mojave. Gen. Winn, Mr. Poindexter and some other citizens have also some good claims located here. The district, taken as a whole, is a valuable one and well worth the attention of those seeking investments in copper mines. The geological structure of the district is nearly the same as that of the Williams' Fork and Freeman Districts.

After leaving the Eretaba District there is but little appearance of copper ore until you get to the Freeman District, some sixty miles south or southeasterly, and nearly opposite the mouth of Williams' Fork, which is a small stream that enters the Colorada from the east side.

At this point the Colorado cuts through a broad range of black and redish brown hills or low range of mountains, composed of porphyry, conglomerate, redish brown sandstone, granular trap and many varieties of metamorphic rocks, of every color, making altogether a very striking and singular appearance. This belt of mountains is from thirty to forty miles wide, and is much divided by cañons and segregated ridges. I think this range of mineral country belongs to the triasic series of rocks, so famous in other parts of the world for their rich deposits of copper. The Freeman District on the west side, and the Williams' Fork District on the east side of the river covers the available portions of this mineral belt, a distance of twenty miles back from its banks. The general course of these copper ranges appear to run in a N. W. and S. E. direction, and are distinguished by their black and redish brown colors, called by the miners "burnt ranges." In fact the mountains, in many cases, are capped over with lava and volcanic scoria, which would seem to favor the idea that the country has been burnt to the extent of desolation.

The veinstone or guangue containing the ore is generally composed of spathic iron, heavy spar and quartz; it is very rare that you see a vein in which quartz predominates. The ore exists in almost every variety from the carbonate stain, to copper glance. The gray sulphurets will probably be found in excess when the mines are opened near the water line, but the oxides and carbonates are the predominating ores on the surface.

The navigation, to this point, is good and the landings are better than on any other portion of the river that I saw; the narrow bottoms along the banks give sufficient room for towns and residences to supply the demands of the mining interest. I shall not attempt to give anything like a definite opinion of the comparative value of different leads or veins, my object is to give general facts relating to the character and position of the copper ranges on the line of the Colorado. In the last named districts there are hundreds of small veins or stratas of copper ore of great richness that will never be of any permanent value; the quantity of ore being too small to pay for the cost of working them. From these small veins come most of the very rich specimens that you see exhibited in the hands of parties from the Colorado country.

The Chimewawa District, still further down the river, on the west side, and nearly opposite La Paz, shows some good ore, but I should judge the veins to be somewhat uncertain in extent. They have the appearance of being segregated or lenticular veins, giving small quantities of very rich ore.

The Weaver district some twenty miles southeast of La Paz, on the east side of the river, is full of small lenticular veins of very rich ore. The veins are also 'pockety,' and associated with a glassy quartz gangue in which the ore is found in lumps and bunches from the size of a walnut to that of a flour barrel. I am inclined to the belief that the surface working of some of these veins will be very profitable, but for permanent mining I think they are somewhat hazardous.

A fine vein of copper ore, of good quality, has been opened in Salaza or La Paz district, some thirty-five miles east or perhaps northeast of La Paz, called the Apache Chief. Gold, silver and lead are found in the same neighborhood, and a large number of claims have been located. The records of this district are kept at La Paz. The objection to this is its distance from the river and the scarcity of water and grass.

The Castle Dome district is still further south, on the east side of the river, its location is twenty-five or thirty miles north of the Gila, and about the same distance east of the Colorado. I did not visit it, but samples of ore that I saw looked well. It also contains veins of argentiferous galena.

So much for the copper mines. In a subsequent article I will speak of other features of the country that may be of interest.

Investigator.

An Extraordinary Mental Development.—An Eastern correspondent of the *Boston Commonwealth* gives the following account of a wonderful mental development which has recently been noticed in a person lately arrived at Bombay from Madras. He is known more particularly from his skill as a chess player. He is between 45 and 50 years of age. He plays several games—three, if I remember—blindfolded, and wins them. At the same time plays a game of cards—there are 120 different cards in a Hindoo pack—and wins. At the same time when these games are going on, he is given "orally" sums of multiplication to the extent of four figures (e. g. 9,397 by 8,999) and gives the correct result. At the same time a sentence of about 100 words, each word being numbered, is given to him irregularly (35 if, 92 but, 61 pitcher, etc.) and he gives the whole sentence. During the game a bell is touched every one or two seconds, and he gives the number of times it has been touched. A man stands behind and throws little pebbles, one by one, against his back; these too he counts. And after the games are over, and all these told, he recites a poem in perfect rhyme, which he had composed during the sitting! [?]

Reese River Letters.

We are permitted to take the following extracts from a private letter, dated Austin, (Reese River,) Jan. 2nd, 1864:—

SMOKY VALLEY.

This valley is about ninety miles long, reaching from the neighborhood of Simpson's Park, on the north, to a cross valley at the edge of the Colorado desert on the south, with an average width of about fifteen miles. The first district, beginning north, is the Mountain district, containing a number of good ledges; among which may be enumerated the Mountain, Croesus, and Clifton. Going south we next come to the Smoky Valley district, in which are the Keystone, Olive Branch, Mount Vernon, Smoky Valley, Mammoth, Hope, Gen. Shields, Yellow Jacket, Indian Queen, Union, Diamond, Antiquarian, Comstock, Clinton, Jupiter, Gibson, Masonic Tunnel Company, Chieftan, Occidental, Webb and Canon, Ne Plus Ultra, Napoleon, Globe, and many others, all large and I think rich. Still going south we come to the Santa Fe district, where we find the Robespiere, Otho, Boston, Henry Clay, Southern Rights, and I could mention others, but the list is already getting too long. Going still farther south, we find the Bunker Hill district. Here we have the Blue, Morning Star, Real del Monte and others. South of this is La Plata district, where we find the Mammoth, Desert, La Plata, and a few more; then comes the Marysville district and King district, with lots of ledges; but I will not trouble you with a list of their names. South of this are the Hot Springs.

Going still south we find that Smoky Valley opens into another valley running east and west. Crossing this we find, on what I should call an oasis in the Colorado Desert, the San Antonio district. This is a new location and I did not learn much about it, but will give you a description of it soon. They have a number of fine ledges and there are now about two hundred men in thedistrict. I stopped at the town of Clinton with Mr. Ellery, our old acquaintance, the gentlemanly superintendent of the Antiquarian, Comstock and Ellery Company's mines, and had a fine time. I think the Ellery and Antiquarian Companies have the best thing I saw during my tour.

[Extracts from a second letter.]

THE WINTER AT REESE RIVER.

As you have not been here at this time of the year, I suppose you would like to know something about our winter season and how much snow we have to shovel before getting out of our cabins. So far we have seen but little snow, and the Winter has been pleasant the greater part of the time; indeed I doubt if you could improve it any by exchanging your climate at the Bay with theone we have here. It is true that there are sudden changes in the atmosphere of this region, and sometimes they are rather peculiar, not to say eccentric. Some mornings the sun will be seen rising up from the east, over the hills and mountains in all its glory and splendor, and as you take a look at Nature you will come to the conclusion that there is a bright and beautiful day in prospect; but about ten o'clock, perhaps you will observe great black clouds looming up, which you set down at once as the barbinger of some terrible storm, and by noon those clouds will be over our heads and for two or three hours it will hail, snow, and blow a hurricane; then suddenly, as if by magic, the storm ceases, the clouds break away, and the sun is seen shining as bright and clear as though there had been nothing to ruffle the face of Nature. Such has been the weather that we have had so far, though it is as shifting as the changes of the moon and about as regular. Still we could not wish for anything better, and we are all so well satisfied, that we choose to rough it out until Spring, instead of going to California.

IMPROVEMENTS.

You know that I have not been out in this section

since last July, and can imagine that I was much surprised at the improvements that have been made since that time. Clinton is a very well laid out town, and in a few years I think it will be one of the most prominent around here. To say nothing of the extensive mines around it, it has natural advantages which can not be found at any other place in this part of the Territory. It is located upon a very level piece of ground, and requires but very little grading for buildings or for streets. It will be not only a desirable place for residences, but also a good location for business; as it is central to the other districts, and only a few miles from the great overland road. There is a good road to Austin, and in the Spring they intend having a road to connect with the overlandline. Water and wood is plenty; the water being as good as any in the mountains of California.

THE MINES.

I did not have much chance toex amine the mines. They have run quite a tunnel into the Antiquarian and have already taken out some good rock. I examined the Chieftain as well as I could, and as I looked at the huge croppings of this ledge, which seemed to tower above all the rest, I felt as though I should like to walk right up to it and open the door of what I am confident wi l prove to be as good as another Aladdin's Palace. The boys are taking things easy now, but will soon be ready to open the spring campaign. They know very well what they have got hold of, and are not in the least worried about the excitement in other districts. I hope that the rest of the boys will he up from the Bay soon, so as to have a hand in taking out some of the good things. I intend going over again in a short time and perhaps then I shall have a better opportunity to observe what is to be seen. Wages here are generally four dollars a day and board. B.

SANITARY REMARKS.

FEVER.—What is fever? Simply a process of purification. Fevers are not intrinsically dangerous. Nearly all the danger results from the erroneous manner in which they are ordinarily medicated. The terrible typhus or typhoid fever, of which so many people are said to be dying continually, is not in itself dangerous. No person can have a fever, unless there are obstructions in his system which ought to be removed; and the fever is the attempt to remove them. So far, therefore, it is dangerous not to have a fever, provided the causes exist. There may be circumstances or complications which w ll render the remedial struggle unsuccessful; but the disease is a remedial effort nevertheless. No one should allow himself to be stimulated in a fever.

A fever is a process of purification; it should be neither subdued nor suppressed. It should be rather aided, assisted and regulated. A fever is not a *substance* but an *action*—a disturbance. It is not an enemy, but rather a friendly defender—a something to be directed rather than destroyed. We sometimes hear that a person has had an "attack" of fever. The expression is absurd.

SAVE THE INNOCENTS.—Starchy food for infants, such as arrow-root, sago, tapioca, corn-starch, etc., is commonly held to be not only very digestible, but highly nutritious; and yet it is a very common experience with medical men to find children so fed to be feeble, sickly and poorly nourished. Professor Rolleston of Oxford, has shown the reason of this, and in an interesting paper recently read by him before the British Association, has demonstrated, by the record of a series of experiments, that the digestive organs of infants are powerless to convert and digest starch in any degree whatever. The practical value of this important discovery is immense. Children are daily being starved to death, while apparently abundantly fed, through the ignorance of this fact; the only real nourishment received by them being the sugar, milk, eggs, etc., which are combined with their arrowroot diet.

COLDS—HOW CAUSED AND HOW TO BE AVOIDED.—Winter is especially the season for *colds*. Most people entertain the idea that colds are a necessary accompaniment of cold weather, but such is not the fact. A great many more *colds* are brought on by exposure to the heated and vitiated air of warm, close rooms, than by exposure to cold, and, perhaps, a still greater number, are induced by exposure to small currents of cold air in rooms that might otherwise be comfortable and healthful.

Persons who are habitually exposed to cold, in the open air all day, or nearly so, are very seldom troubled with *colds;* it is only those whose skin is feeble from a continued and intimate connection with warm, stifling, enervating air, and whose cuticle is almost or entirely unacquainted with water, soap, and towels, who live in daily fear of this unpleasant condition—not to say disease. Apartments which are not ventilated in the best manner, by means of warmed air, or a large open fire-place, should be frequently aired. The best way to do this, and which will occasion the least possible danger of being affected by streams of cold air, is to open, occasionally, a large window, or door, and give the room a full and perfect airing at once. This process should be frequently repeated during the day. This plan is especially adapted to school-rooms and shops, where a great number of persons are present during the day.

IMPORTANCE OF LIGHT.—A tadpole confined in darkness would never become a frog; and an infant being deprived of heaven's free light will only grow into a shapeless idiot, instead of a responsible and beautiful being. Hence, in the deep, dark gorges and ravines of Swiss Valais, where the direct sunshine never reaches, the hideous prevalence of idiocy startles the traveler. There is in all places a marked difference in the healthiness of houses according to their aspect with regard to the sun, and those are decidedly the healthiest, other things being equal, in which all the rooms are, during some parts of the day, fully exposed to the light.

EPIDEMICS attack inhabitants on the shady side of the street and exempt those on the other side, and even in epidemics, such as ague, the morbid influence is often partial in its labors.

STOP COUGHING.—Slight irritation of the throat may be relieved by sipping a little thick slippery elm tea, or by sucking a piece of gum arabic. These articles coat over the mucous membrane, and prevent the irritation of the air. A few drops of paregoric held in the mouth, and allowed to trickle down the throat, will allay coughing.

GERANIUM LEAVES are an excellent application for cuts, where the skin is rubbed off, and other wounds of that kind. One or two leaves must be bruised, and applied on linen to the part, and the wound will become cicatrized in a very short time.

TAKE CARE OF THE SKIN.—Most animals have numerous little oil glands, of microscopic dimensions, deeply imbedded in the skins. These glands, or oil-bags, are constantly throwing out small quantities of oil. This oil must be frequently worked off or it engenders disease. In addition to these glands, the skin is pierced with innumerable little openings called pores. It is through these pores that, during violent exercise, accumulated perspiration, or "sweat," escapes. There is at all times, what is called "insensible perspiration" escaping through them, in the shape of a thick mist or fog. This may be proven by holding a bright mirror close to any portion of the body, when the perspiration will immediately become condensed upon its surface. Or if we sit when the sun shines across us upon a wall, we can see the shadow of this mist on the wall as it ascends from us.

If this perspiration is checked for any considerable time, mischief in the form of colds, fevers, rheumatisms, and consumptions may ensue. Great mischief may also follow, if this perspiration is checked by neglect of cleanliness. The better we understand this part of the human system, the more we shall realize how important it is that we should employ daily ablutions. And yet how many there are, who hardly wash at all, except perhaps their faces and hands! Such persons are scarcely fit to be entrusted with a habitation so fearfully and wonderfully made as is the human body. In truth, they are not usually so long entrusted to it as others. The Great Architect usually turns them out many years earlier than he would, if they took care of it; and in the case of malignant fever, sometimes thrusts them out with apparent, though deserved violence.

[The above facts are condensed chiefly from the *Herald of Health*. We shall continue this chapter, from time to time, as space in our columns may present. Our aim is to make the PRESS useful in every department of human knowledge.]

[Written for the Mining and Scientific Press.]

Hints to Prospectors.

BY J. H. CHURCHILL, A. M.

[CONTINUED FROM PAGE EIGHT.]

IV. The net value of the ore, i. e., its yield less its own cost of mining, raising and selling, relatively to the surplus yield of similar ores. The determination of the ore must depend on the mode of sampling in all cases where long work has not supplied data for a correct average. Dishonesty in the selection of ore is more dangerous and almost as easy on a working scale as with a pocket specimen—it is no novelty. The cost of mining, i. e. underground labor, in the tin, lead, and copper mines of England may be estimated as between .4 and .5 of the total cost of the ores when rendered marketable. The tin involve the lowest proportion, partly in consequence of the additional labor in dressing them at the surface.

The cost of renching a given depth in a mine, will be considerably less by means of an incline than by a shaft—it is estimated as being quite as cheap for raising ore, it is more convenient for the ascent of the hands, it prospects more ground, and it must be borne in mind that an incline can be laid out within the lode, if wide enough, along its length where the dip is too great for it to follow the latter. On the other hand, where the lode is only wide enough for a gallery, an incline cannot he enlarged with the same proportion of cost, and it entails extra expense for pipes where pumps are necessary.

Some provision for removing water at low depths must he estimated for. The quantity of water will, in some cases, depend on the rainfall or snow. In Cornwall it varies from 10,000 ot 20,000 gallons per minute. The average cost is between two and three cents per 1000 gallons for every 100 fathoms of lift.

The average yield of the ores, when cleared from veinstone and clay, forms the criterion in Europe, and as our methods of working become economical we shall approach this standard:

Silver Ores:—	Average in five tons.	
Of Jonchimsthal	200 to 300 lbs.	[A]
Of Zacatecas	50 lbs.	[B]
Other Mexican ores	25 lbs.	
Of Audreasbero	36 lbs.	
Near Clausthal	10 lbs.	
At Freiburg, (concentrated,)	42 lbs.	
Minimum	5 to 1 lbs.	[C]
In South Wales	10 to 15 lbs.	[D]

Lead Ores.—Of Germany: from 35 per cent. at Frieburg up to an average of 68 to 72 per cent. at Blerburg. In North Wales: concentrated ores from 70 to 78 per cent—the loss in smelting nearly 10 per cent.

Copper Ores.—In Cornwall average from 7 to 8 per cent.

Tin Ores.—In Cornwall 0.9 per cent, which are concentrated to 60-70 per cent.

[A.] Very impure ores, worked by precipitation, at a saving of two-fifth of the cost of smelting. The loss less than 10 per cent.
[B.] Stephanite and bromide of silver.
[C.] The poorest ores worked also for copper and lead.
[D.] Argentiferous lead smelted with a loss of 24 per cent. of silver.

[To be continued.]

WHO IS OLD.—A wise man never will rust out. As long as he can move and breathe he will do something for himself, his neighbor, or for posterity. Almost to the last hour of his life, Wellington was at work. So were Newton, Bacon, Milton and Franklin. The vigor of their lives never decayed. No rust marred their spirits. It is a foolish idea to suppose we must lie down and die because we are old—who is old? Not the man of energy, not the day laborer in science, art or benevolence, but he only who suffers his energies to waste time, and the springs of life to become motionless, on whose hands the hours drag heavily; to whom all things wear the garb of glory.

DISCRETION.—There are more shining qualities in minds of men, but there is none so useful as discretion; it is this, indeed, which gives a value to all the rest, which sets them at work in their proper times and places, and turns them to the advantage of the persons who possesses them. Without it, learning is pedantry, and wit is impertinence; virtue itself looks like weakness; the best parts only qualify a man to be more sprightly in errors, and active to his own prejudice.

Summary of Mining News.

GLEANED FROM VARIOUS SOURCES.

Placer County.—Encouraging reports continue to reach us from the neighborhood of Placerville. The Harmon Company is said to be doing well, while the mine is rapidly developing into a valuable property. A shaft is being sunk in the tunnel which will soon demonstrate what kind of rock this ledge is composed of. A correspondent of the *Alta* writes that a corps of men, with hand mortars, make a one per cent. per month dividend with the rock in sight.

The New York Mining Company, which is chiefly composed of San Franciscans, have now one of the best mills in the State which runs like "clock work." The company have spared no needed expense upon it. Their ledge is not yet fairly opened, but they are vigorously driving a tunnel to strike the vein; in the mean time there is a sufficiency of rock out to keep the mill running. The mine is under the superintendence of W. T. Henson, Esq., an experienced and practical man.

The Hinchman is attracting considerable attention at the present time. They have about two hundred tons of rock ready for crushing. Their building is all ready for their machinery, which is probably on the ground by this time. The location of this mine is about six miles from Placerville.

Sierra County.—It is said that from $150,000 to $200,000 will be taken out from the mines of St. Louis, Pine Grove, and Howland Flat, the present winter and coming spring. The Hiberuia Co. will clean up $40,000 from the dirt they have ready to wash. The Union Company, at Wet Ravine, have just taken out one ton of rock, which, it is estimated, will yield $15,000. The *Democrat*, says that the new mill, belonging to the San Francisco company, at Nebraska, started up last week for the first time. As the ledge is one of the best in the State no doubts are entertained of its success We gather the following from the *Messenger*: The St. Louis, company at Howland Flat, have commenced drifting again, having washed up all the dirt they had out, which paid handsomely. The French Co., on the Middle Yuba, near Minnesota, have struck a pocket from which they estimate a yield of about $75,000 bullion in gold. The Golden Gate, Monte Cristo and Erie companies at Port Wine are also doing a good business. We are told that the Monte Cristo company are cleaning up $3,000 per week. The Union company have taken out about $5,000 worth of very good rock, with plenty more in sight. Adjoining is the Fac-simile company, which is incorporated; they have a very rich ledge, and are now taking out rock that will pay one thousand dollars per ton. The Sierra Nevada company, also incorporated, is said to be good, and others too numerous to mention.—The Red Star company, (gravel diggings,) are making eight dollars a day to the hand. At Smiths Flat the hydraulic claims are paying well. At Chips' Flat the Rainbow Quartz Mill is being repaired, preparatory to crushing some good rock which they are now getting out. The Lone Star company at Pine Grove, made a big clean up lately, which made the boy's feel as though they could afford to make another run on the bank. The Potosi company, at Pittsburg, are making a good thing this winter; they are declaring a dividend of one thousand dollars a share per month. This is one among the many of the rich claims, in that quarter. The Junction Quartz Co., at Mount Vernon, according to the *Democrat*, has been quietly but diligently, for the past two months, prospecting their mine by means of a tunnel, are now nearly 100 feet beneath the surface, where paying ore equal in richness to any heretofore discovered is found in quantities to warrant the construction of machinery for crushing, which will be consumated at an early day. The ledge is now from 6 to 10 feet wide, and shows good indications of growing stronger the deeper penetrated.—Sierra will hold her own with any county in the State in respect to rich diggings.

Brown's Valley, Yuba county, still continues to attract much attention. The town is improving, new buildings are going up, and the population increasing every day. The new mill of the Jefferson company has been started again. Mr. Snyder is superintending the mills in person, Mr. Harrison having retired.

The Monterey Mines.—Advices from the Soberana, Maria and Buenaventura mines in the San Antonio District are very flattering indeed. Very rich ore is now being taken out by the operators, who are steadfastly pursuing their labors. According to the Monterey *Gazette*, there is no doubt of the exceeding richness and great extent of these mines, and their steady development will very soon demonstrate the fact.

Reese River.—We would call the especial attention of our readers to the extracts from Reese River letters found on another page. Favorable reports still reach us from this locality. The *Reveille* has seen a good sized silver brick obtained from the rocks from the Warner & Wells, a ledge on Lander Hill, discovered a few weeks since. The brick weighed 512 ounces, and was worth $719 96, all the yield of 2,160 pounds of rock. A ledge that yields so well within a few feet of the surface, must promise rich returns at a greater depth.

The *Reveille* states that fifty dollars has been offered and refused, for a rich specimen of silver ore recently brought in from Union district. It would be a magnificent ornament for any cabinet of minerals.

A Reese River mining decision was recently rendered by Judge Lake at Carson City, in the case of the Mills & Post vs. the Black Swan. The Mills & Post applied for an injunction on the ground that the Black Swan is a parallel ledge lying within a hundred feet of the Mills & Post ledge. The mining laws of the district allow each company that number of feet on each side of their claim. The Judge denied the motion, holding that the breadth was for working purposes, and not for discovery. Most of the mining laws of the various districts both in that Territory and in this State contain similar provisions, and to which this decision is not inapplicable.

The Young American ledge, at Yankee Blade, prospects so well that the company are going to incorporate. According to the *Reveille*, the mines in Austin district, as well as the mills are contantly at work. A prospect from a few pounds of rock from the Batburst ledge yielded $4 47 in silver. An assay from the Sedgwick yielded at the rate of over $3000 to the ton. Fifty pounds of top rock from the Tippecanoe ledge yielded at the rate of $75 80 to the ton.

The Whitlach ledge was located last Spring, and contains 600 feet. It paid well at the surface and improves as they go down. A shaft has been sunk fifty feet and a drift run north and south. The ledge is eight feet wide and looks "magnificent." Over 100 tons of rock is piled up at the mouth of the shaft, from which ten tons of very superior looking ore has been selected. This latter will soon be crushed. The Union No. 2 is the first extension.

The Oregon continues to work admirably. It is engaged upon rock from the North Star ledge. Work is being vigorously prosecuted upon the Lighthouse ledge. The rock is hard and much blasting is required. It is improving. The Indus tunnel is in about 100 feet—whole length, prodoseds about 1000 feet. It is progressing rapidly.

Work upon the Amador is progressing with much energy under the superintendence of Mr. Bennett. Two tunnels are being run into the company's ground. The company claims three principal parallel ledges, upon each of which three shifts are employed. An incline is being run on the main, or Amador ledge, which will connect with the tunnel for ventilation, etc. Rich developments are confidently anticipated when the workmen reach any considerable depth.

The *Reveille* of January 9th, says that Mr. T. J. Barnes has just returned from an extended tour through the Smoky Valley region, and reports many new and most important discoveries, consisting of extensive mining and timber lands, with valuable water privileges, etc. In this connection we would again call the attention of our readers to the letters from this region elsewhere published.

Humboldt—We have but little of special interest from Humboldt this week. Notwithstanding the region of country now comprised in what may properly be called the Humboldt district, already covers an area more than twice as large as the entire State of Massachusetts, new discoveries are still being made, and new districts added from time to time. The Humboldt ledges are generally wide on the surface and unless they prospect well they are not considered worth prosecuting. The greatest draw back to the development of the Humboldt mines heretofore has been a want of capital and an imperfect system of mining laws. Another season, it is confidently expected, will bring out most satisfactory and important developments for this interesting mining region.

Virginia City and Vicinity.—The important developments recently made in the Lady Bryan, seems to have given a new impetus to mining operations in that vicinity. Rock richer than ever, it is said is now being taken out from that portion of the mine where the late strike was made. Of course little is known about the extent of the deposit, but there is certainly a large amount of good ore in this part of the lead. They have also struck very promising ore in the main shaft, now 180 feet deep, being about 80 feet lower on the vein, and a considerable further east than where the ore was first found. The prospects of the company are now certainly exceedingly flattering. These developments, says the *Enterprise*, are cheering to all, whether miners, merchants, or mechanics. We clip from the Virginia and Gold Hill papers, the following items with regard to some of the progressive mines in that region. The Hearlem company is doing a large amount of work, and have struck some very rich looking rock. They have a shaft 150 feet deep and a tunnel 500 feet long.

Ore of a good quality has been struck in the Indiana claim, on the Eliza Waldo lead. This success is a very encouraging fact to several other companies in that vicinity.

The Crown Point tunnel is now in 800 feet, but the lead which is at present attracting much attention, was struck and passed by without proper examination, at 600 feet. The company, since, learning its value, have commenced drifting upon it, and will soon commence working from this drift. The lead is about 30 feet thick, carrying scattered patches of sulphurets; it is very much decomposed and easily worked. Mr. D. Lachmeu is Superintendent, The Justis has just had its first crushing of 100 tons which resulted in a yield of $55 to the ton. They are down about 100 feet on the vein.

The Tri-Union. first located in '59 as the Cherokee, changed to its present designation in 1862. After a long cessation of work, the company has now recommenced with most encouraging prospects of success. The lead is located in the immediate vicinity of the Lady Bryan, is about 12 feet wide and well defined. This is one of the many results of the renewed activity which has been caused by late success of the "Lady."

The Gold Cañon Consolidated, is just now attracting considerable attention. It is one of the oldest claims in Gold Hill district, having been located in '59. Its past lack of success is attributed to bad management. A change in that respect has recently been made and the work of development is now being energetically prosecuted with encouraging indications.

The Midas has just produced its first "brick" from 2,100 lbs of rock, almost exactly equally divided in value between silver and gold, and weighing 25 ounces, worth a little over $50. It is a segregation from the Belcher.

The Clinton and Watts Co., are sinking a new shaft upon their lead which is now about 8 feet thick and of promising appearance. It is located just north of the Justis ground.

The Homestead claim consists of only 200 feet, on which a shaft has been sunk to the depth of 102 feet with a drift 150 feet long, developing a well defined ledge 15 feet wide.

The Knickerbocker claim lies immediately west of the Baltimore American, and in line with the Uncle Sam. A tunnel having been run a distance of 100 feet, without any important development, the old proprietors became discouraged and the ground finally passed into the hands of a new company which has re-commenced work. The new proprietors feel very confident that they are on the same lead with the Uncle Sam, and other rich claims in that line. The rock already taken out looks very promising, and gives a handsome prospect in gold, on being pounded up and washed in a pan.

The Monitor claim is a comparatively new location, upon which work has been commenced with encouraging prospects. It is located in Crown Point ravine.

Late developments are making it very plain that there are good mines to be found outside of the regular Comstock lead.

Bullion from Nevada.—The total amount of treasure shipped to California, during the past year, from Nevada Territory, as obtained from the books of Wells, Fargo & Co., foots up at $11,043,455, this does not include the shipments from Reese River or Humboldt. Wells, Fargo & Co's. agents express the opinion, founded on the late rapidly increasing rates of shipments, that the yield of the Territory for another year will not be less than $23,000,000, and may reach $30,000,000.

The monthly shipments from Esmeralda, which are included in the above is given in the Aurora *Times*, upon the authority of Wells, Fargo & Co., as follows :—

January	$12,626
February	12,798
March	15,597
April	30,385
May	33,397
June	33,037
July	48,000
August	69,758
September	30,328
October	104,519
November	122,874
December	92,346
Total	$625,151

This exhibit, all things considered, speaks well for the mines of that region. It is safe to set down Esmeralda as good for $2,000,000 the present year.

The splendid new Engine of the Del Norte Mill, which was fully described in our columns some three months since has had a trial start, and, according to the Aurora *Times* "worked beautifully."

The Davenport Company has taken out some rich rock.

The *Times* has seen some fine looking rock from the Cortez claim which looks as if it would pay $100 to the ton.

The Monroe & Fletcher Tunnel, and Alturas, are both thought to be valuable claims, with good prospects. Work is progressing finely on the Haulet and Wonder tunnels. The Enterprise, Pennsylvania, and Unadilla Companies, penetrating Last Chance, are pushing along vigorously. They have already cut through several rich ledges, and will no doubt strike other and richer ones before getting in much further.

Antelope Mill.—This large and beautiful structure will soon be completed. The Antelope mill resembles the Del Monte very much. It runs ten stamps less. The splendid machinery for both mills was furnished by the Miner's Foundry, of this city.

Last Chance.—Operations continue with unabated vigor in this famous mining locality. According to the *Times*, the Pond, Moseow, Jennie Johnson, Crockett, Wide West and many other claims are taking out as fine looking rock as one would wish to see.

Difference of Assay.—A very marked difference exists in the fineness of the bullion taken from claims, on the Comstock lead in Virginia City.—That taken out from the mines north of Gold Hill, assay about 20 parts of gold in 1,000 ; while the bullion from near the hill itself and from below, generally runs as high as 125 parts of gold to 1,000 ; or 125 gold and 875 silver.

Another Extensive Salt Bed Discovered in Nevada Territory.—The Virginia City *Union* of January 7th says :

"Mr. Gartrell, of this city, informs us of a most important discovery—one of which is worth millions of money and of incalculable value to the silver mining interests of this Territory. It is no less than the discovery, near Sand Springs, on the overland wagon road, of a salt bed five miles square. About 30 owners altogether, have located the whole basin in which the salt is found. This basin appears to have once been the bottom of a lake, and the salt is found good even on the surface. A covering of about three inches is loose and indifferent; but beneath this, for a depth of fourteen feet, pure rock salt is found as clear as ice and as white 'as the driven snow.' Beneath there is water, which seems to be filtered through salt for an unknown depth. The whole of this fourteen feet in thickness does not contain a single streak of any deleterious matter or rubbish, and is ready for quarrying and sending to market. Great blocks of the pure stuff can be raised the same as if it were ice or stone; on exposure, however, it crumbles sufficient to admit of being closely packed in sacks or wagon boxes. Once loose salt on top is removed, one man can quarry and wheel out five tons each day, ready for mill use or to offer on sale in the store. This salt is so convenient to get at, and so near the great overland road, that the proprietors are confident they can sell it in this market at 5 to 6 cents the pound, or half the present price of the article. Mill men will rejoice at this fact, as some 300 tons are required for the mills in this and adjacent counties.

The Colorado River Mines.—Recent arrivals from the Colorado river mining country, all furnish corroborating testimony of the great extent and richness of these mines. The river is unusually low, and navigation almost or entirely suspended ; provisions scarce and dear in the mines at La Paz. In some instances, work has been suspended on account of the scarcity of food. The El Dorado Cañon and the Chimawawa Districts are furnishing more flattering indications.

In this connection we would call the especial attention of our readers to an interesting communication with regard to these mines. The article is from a very intelligent gentleman, who has recently returned from that portion of the State, and has promised us further information from the same quarter.

Lower California.—From the Peninsula of Lower California we learn that work on the Triunfo mine is being prosecuted with vigor. The main tunnel has been run a distance of 450 feet, cutting the Carmen vein at a distance of 330 feet, and intersecting the old working shaft, (from which their rich ore has been taken,) at 400 feet. A shaft has been commenced in the tunnel and the vein has widened from four to seven feet. Fifty tons of ore are ready for crushing, an average assay of which yielded $1,200 to the ton. Their mill (ten stamp) is nearly completed, and will be in working order on the first of February. Negotiations are now pending for the shipment of ores to Frieburg, as the capacity of the company's mill is not sufficient for the reductions of ores.

No delinquent assessment has ever been advertised by this company, a fact which speaks most encouragingly for the confidence with which stockholders regard their interest in this mine.

Quicksilver Discovery.—The Mariposa *Free Press* says : "A new and valuable discovery of a cinnabar vein was made near Sherlock's and Mullen's gulch. Considerable excitement exists and numerous "feet" have been taken up. If it turns out equal to the representations made, it will give a fresh start to a region of country favorably known in the days of rich diggings, but latterly supposed to be about "played out."

Notice to Quit.—The Potosi company at Virginia City, has given notice to all the house and land owners on B, C and D streets, beginning at the junction and extending several blocks northerly, to clear out, as they claim the ground. The property owners have allied for mutual protection, and employed Tod Robinson to defend them.

Owen's River Express.—Messrs DeKay and Hutchinson have just completed their arrangements for running an express between Aurora and Bead City, and all intermediate points, carrying and delivering promptly, letters, packages and parcels.

A Dual System.—The opinion appears to be taking root in Virginia city, since the late remarkable developments in the Lady Bryan mine, that they have a double system of mines in that region, made up of the Comstock on the one side, and the Lady Bryan on the opposite side of the city. Both are mammoth ledges, the latter fully as heavy or heavier than the former. Lady Bryan is located about three miles East of the Comstock, and certainly presents at the present time, every indication of being developed into a most valuable mine. Its consort and Northern extension, the Desert, is already attracting considerable attention, and arrangements are being made to have it thoroughly opened. Further developments in this direction will be looked for with much interest as well as curiosity.

Exchanges.—We have welcomed upon our table, during the past week, quite a number of new acquaintances in the shape of newspaper exchanges. No other State in the Union, of the population of California, boasts of an equally large, handsome and healthy appearing list of newspapers. To our neighbors who have spoken highly of our enterprise, we return our best compliments, and we will next week give our readers the benefit of some of their liberally expressed opinions.

Treasure Receipts from 1861 to 1864.—The following is a careful statement of treasure receipts in San Francisco during the past three years :

	Uncoined.	Coined.	Total.
From the Northern Mines, 1861....	$28,621,687	$3,701,076	$32,325,863
From the Northern Mines, 1862....	30,948,369	3,436,728	34,385,097
From the Northern Mines. 1863....	33,936,771	3,978,624	37,915,395
From the Southern Mines, 1861....	7,257,545	2,105,669	9,363,214
From the Southern Mines, 1862....	6,601,509	1,553,193	8,154,702
From the Southern Mines, 1863....	5,610,094	1,801,837	7,411,981
Coastwise receipts, 1863.....	4,366,510	603,513	4,970,023

Not to be Disturbed.—Gen. Wright authorizes incorporated mining companies to continue work on their mines on Santa Catalina Island until further orders relative to its occupation are received from Washington. Valuable discoveries of rich silver and lead ore have been made on this island, which is situated about twenty miles off the coast from San Pedro. The locality of these mines is said to be easy of access, so that vessels can readily load and take the ore thence at a merely nominal price for freight.

Improved Baling Press.—D. L Miller, of Madison, N. J., is the inventor of what appears to be an important improvement in Baling Presses. Improvements in this direction are quite important in preparing certain articles of merchandise for market, as hay, moss, hops, pulu, etc. The inventor claims that it has been satisfactorily tested.

The New Opposition Steamer, the "America," is advertised to take her place in the line. She will leave Mission street wharf, in this city, on the 3d of February next. See advertisement in another column.

The Citizens of San Jose are to hold a grand jubilee to-day over the completion of the Railroad to their city. A train of excursionists leaves San Francisco this morning to participate in the happy occasion.

"Masonic Temple March," is the title of a handsomely printed piece of sheet music published by Wm. P. Harrison, of this city.

The Sierra Nevada, which left this port for ports in Mexico, on Monday last, took away $12,523 in treasure and $94,571 in merchandise.

The Pacific, from the north, brought down $100,000 in treasure from Portland and $25,000, from Victoria.

Treasure by the Orizaba.—The Orizaba, which left this babor on Wednesday last, took away 80 passengers, and the sum of $1,140,087 67 in treasure.

The California Wine, Wool and Stock Journal, for January, is filled with interesting contents for farmers and stock growers.

Miscellaneous Information.

Gunpowder.—The amount of gunpowder imported into California in 1862, was 36,860 kegs and 10,807 cases, in 1863, 38,084 kegs and 2,829 cases. The California Powder Works Company, situated at San Lorenzo, according to the *Mercantile Gazette*, expect to begin their operations in March next, by manufacturing 200 kegs per day. At present and for a series of years past, the Hazard and Dupont Powder Companies have measurably controlled this market through their respective agents; and, during the early part of 1863, met all the demands made upon them at the uniform price of $4 50 per keg for blasting. This rate continued until September, when the agents put up their prices to $5; this latter rate continued until November, when it advanced to $6, and so continued for about 30 days, when stocks becoming exhausted, owing to the non arrival of various clipper ships with heavy supplies on board, agents were forced to restrict their sales, giving no one buyer over 5 or 10 kegs or thereabouts, at $8. At this juncture outsiders stepped in and began to feed the market at $10 and upwards, though the largest speculative holders are now asking much higher rates. The impression had long been current by many that the aforsaid agents held very large supplies, and relying upon that. dealers and others neglected to order supplies from the East; consequently we Californians are left without needed supplies of this important article for the use of our extensive mining and other enterprises requiring large quantities of blasting powder. All interests of this nature are checked or stopped for the want of needed supplies. This state of things must continue until the Undaunted and others arrive, in the spring, when we are promised full supplies; and which, the agents before referred to say it is not their fault—being well posted as to the increasing consumptive wants of the country, and proper representations made to their manufacturing principals at the East—but is chargable to Government wants at home for the prosecution of the civil war now being carried on and to Government interfereuce with shipments California bouud. Besides, none but the best brands and best quality of Powder will staud a voyage around the Horn.

Coal.—Various fluctuations in the price of coal have occurred in this market during the past year, owing chiefly to the large demand for Government purposes, causing high prices at the East, and to high freights. The average price of Anthracite says the S. F. *M. Gazette* was about $19 per ton. The extremes of the market being $13 in April and $27 in December, the year closing at about $24. Cumberland in bulk has been in large supply, and sold at $25 per ton, ex-Deacon. In casks the price has ruled from $26 in March up to $35@40 in September, then declining and closing at about $26 per ton. Sydney sold in the spring and early summer at $10 @11; in August, September, October and November at $12@13 50; in December, a single cargo arriving here upon a hare market was promptly sold at $20@22 for the bulk, closing out at $18, and at this writing we quote cargo sales at 15 50 per ton. West Hartley coal in June sold at $16 50. A cargo in Bymbo sold in August at $16 per ton, and since the beginning of the present year (1864) a large cargo sale of Liverpool, ex Enoch Train, is reported at $17. The California supply, chiefly from the Mount Diablo mines, has been constantly on the increase—not less than 37,000 tons were produced at these mines in 1863. This large yield tended greatly to check the price of all other coals, both hard and soft. The monthly consumption of Mount Diablo the last three months of the year is estimated at 6,000 tons per month. It is used chiefly for steamboats in the interior waters and for mill purposes. The average price of this description during the year has been $9 35 per ton. The Bellingham Bay mines have marketed over 9,000 tons during 1863; and now furnish increased supplies chiefly for city trade. Their product the ensuing year is estimated by the proprietors at 2,000 tons per month. This coal is now selling at $15. The Nanaimo mines at Vancouver Island furnish fair supplies for steam purposes, which will doubtless be increased the present year. Stocks of all kinds are light. The cargo of Sydney coal referred to recently, was closed out at $15 50. We record sales of 2,300 tons Liverpool at $17; 500 tons Sydney at $15 50; 800 tons Bellingham Bay at $15.

A solution of caustic, soda and sulphur, poured nto a lead pipe, and left there for fifteen minutes, iconverts the interior surface of the pipe into an insoluble sulphide, rendering the contamination of water by the lead impossiple.

A California-Made Cotton Press.—Those who chanced last week to pass along Fremont street, near Mission, must have noticed a large frame structure which has recently been erected on a vacant lot on the first-named street. The structure is a Cotton Press—the first ever manufactured on the Pacific coast. It was shipped on the steamer Sierra Nevada, on Monday last, for Mazatlan, and is to be put up on a plantation near that city. This machine is described as follows in the local column of the *Alta:* 'It is to be worked by horses or mules, and is said to have power to compress at one operation cotton into bales in shipping order for foreign markets. It is known as McComb's Patent Cotton Press, and for simplicity of machinery and speed of working, is said to be unrivalled, while its power is only equalled or surpassed by hydraulic pressure. The compressing power is applied from a capstan by a 4-fold rope purchase to a double or jointed lever on each side of the press. These jointed or double levers resemble a man's arm, the shoulder parts being secured to sockets in each side of the frame of the press, while the wrist portions meet in a socket or journal under the bottom press block, the pressure being upward. The 4-fold purchase is applied to large iron sheaves, which are fastened upon a small shaft, which runs through the casting forming the elbow joint. The lever when not used looks like one's arm half crooked, and when the total force is applied becomes almost straight. One great merit claimed for this press besides its power over any other is the speed with which it can be worked, it being capable of compressing 40 bales of cotton per day, when worked on a plantation, from loose cotton."

Climatology, Etc.—Dr. T. M. Logan, in making his report of Climatology, etc., of Sacramento for December last, remarks as follows under the head of "thermometrograph:" A remarkable steady and high range of the barometer, has accompanied the fine weather experienced during the month—unsurpassed by that of any past December of our register. Just rain enough fell to prepare the earth for agricultural purposes, without any of the vicissitudes of heat and cold which usually attend the storms of this season. The heaviest fall of rain occurred on the 23d, which measured more than two thirds of an inch. But little effect, however, was produced upon the river, which varied in hight during the month from about three to four feet above zero.

Under the head of "Necrology" he adds: The influenza continues to show its effect upon those of feeble constitutions and laboring under chronic affections, especially of the lungs. Our mortality table exceeds that of the corresponding month last year to the number of twenty. The diminished ratio of deaths among children, observable last month as well as this, is, however, worthy of special remark, and affords some compensation for the increased mortality among adults.

The rain, of the present season, to Jan. 1st, according to the Doctor's record, is: November, 1.490 inches; December, 1.815 inches; total, 3.305 inches. The last rains have rendered all kinds of land in the vicinity of Sacramento susceptible of being plowed with ease.

A New Ferry Boat called the *Cheshire*, has commenced plying on the Mersey, between Liverpool and Birkenhead. She is constructed on the American plan, has a rudder at each end. and the stearsman is placed in a small round house on the upper deck. She easily accommodates 2,000 passengerf.

A Steel Cannon of the same calibre is about one-third lighter than a brass gun. The artillery force of Russia is adopting the former into the service, by reason of this important advantage of lightness and facility of transportation.

Taxes.—Dispatches from Washington state that the tax on whisky will be increased to 70 cents; that on tobacco and petroleum doubled. Licenses will be increased considerably. On banks, insurance companies, and mercantile ageucies, $100 each; on boarding houses, $10 or $20, according to rental. On draymen and handcartmen, three dollars each. On several other articles the tax will also be considerably increasod.

California and her Destiny.—The new State of California has already become "the pride of the Nation." Its rapid growth and development have been alike a matter of wonder and astonishment to the whole world. The London *Times*, through a correspondent, says:

"California may be reported with confidence to be in a most thriving condition. Industry of every kind is active, manufactures growing, land raising in value, agriculture improving, mineral wealth continually augmenting by the development of the Washoe silver mines and the increased workings of the older gold, quartz mines, while the general wealth of the country is fast accumulating. No country is more prosperous."

The mineral wealth of California is beyond human computation. When all the vast territory of that golden empire of the Pacific shall be peopled and its marvelous resources developed, it will from its very position, we predict, stand and flourish as the great commercial and financial centre of the nation. San Francisco will then rival New York in population, in wealth, in trade, and in power. To us this seems an inevitable, foreseen fact. All that California now asks is railroads to connect her with the East, and then she will begin her brilliant career of greatness, to astonish even herself. European rulers have for years past been watching the progress of this country with the most intense interest—bordering on fear. Hence the very particular satisfaction of John Bull at our present troubles. Now, John, in his *political* creed, hates slavery, and he hates freedom too—that sort of freedom which he knows is tropical only on American soil.

While we are finishing up the job commenced at Bunker Hill and Yorktown—having in prospect other heroic business—we wish simply to hold up to the gaze of our "non-intervention" friends, the other side of the water, the single State of California, and tell them that commonwealth alone *can* if necessary—and at no distance day—shoulder the entire burdens of this pro-slavery rebellion, leaving us in other quarters all the pecuniary strength that will be required to attend to some future holiday duty.—*N. Y. Independent.*

A Submarine Boat of colossal dimensions is now in process of construction in the harbor of Cronstadt, Russia, in which about 200 tons of iron and steel are to be used. It is rapidly progressing towards completion. Great secrecy is being used about this boat. It is known, however, that it will have engines to be worked by compressed air, to have a very strong beak, with provision for attaching large cylinders charged with powder to the bottoms of vessels, to be fired by electricity. Parties navigating the vessel will see what they are doing by means of bull's eyes, and they will be able to regulate the depth at which they swim, generally keeping quite close to the surface.

High Wages.—A correspondent of the Portland *Press*, writing from the Pennsylvania coal region, says he has seen a pay roll belonging to a small operator, showing that most of the common miners are receiving from $100 to $150 per month of 24 days, and they do not work more than six hours per day generally. Boys only twelve years of age make $25 and $30 per month at present rates.

An effort is being made in Boston to establish a line of first class steamers between that port and Liverpool. The prospect of a favorable issue to this attempt is said to be very strong.

An Army officer writes from Arizona that the mineral resources of the Rio Gila have been under estimated, that they are as rich in gold as California, and that the Government should devote itself more to the development of the mineral resources of New Mexico and Arizona.

Paper in Silver Mountain.—We learn that parties, who are practical printers, will start a newspaper in Silver Mountain as soon as they are able to get their material (which is already purchased,) into that new silver region.

Leakage of Gas Mains.—It is estimated that in the city of London one-sixth of the gas made escapes from the mains, a dead loss to the gas companies. This clearly shows the defects of the old system of joiuing mains, for it is wholly at the joints that the leak occurs.

The machinists' strike in New York continues. The employers have proposed a compromise, but the workmen refuse to accept any reduction from their original demands.

Patent Department.

COLBURN'S LAMP FILLER is one of the many useful inventions which have been brought out since the introduction of Kerosene as a burning fluid. It may be applied to every lamp now in use, at a trifling cost. It is a very neat and convenient arrangement for obviating the disagreeable necessity of unscrewing and taking off the top of the lamp to fill it. This "filler" is placed between the burner and the collar of the lamp, and consists of a hinged apparatas, by which on touching a spring, the chimney and burner is made to turn down in such a manner as to allow the nozzle of an ordinary lamp filler to be inserted into the oil chamber of the lamp, which is then readily filled. The invention has already been introduced into this city and is both neat and convenient.

PRESERVING IRON FROM CORROSION.—G. W. Holley of Niagara, N. Y., has secured letters patent for a peculiar composition for protecting iron from corrosion.

FRUIT PRESS—A CALIFORNIA INVENTION.—John Manrow, of Sacramento, has patented and improved Fruit Press, the peculiar combination and working of which we should be happy to describe if the inventor would furnish us with the data.

WOODEN PAVEMENT, by Samuel Nicholson, of Boston, Mass., originally patented, August 8, 1854. We have recently given a full description of this improved wood pavement, together with certain facts in relation to its successful introduction into several cities. We notice that a *re-issue* of this patent has recently been granted.

THE MANUFACTURE OF STEEL.—Messrs Brant & McElroy, of Pittsburg, Penn., have recently discovered and patented a process for manufacturing steel direct from pig iron, in an ordinary puddling furnace. They throw into the furnace pulverized charcoal, or other carbon, when the iron begins to granulate, and close up the furnace so as to retain the gases evolved therein, as described in their specification.

SPIRITS OF TURPENTINE.—Mr. L. S. Cole, of Burlington, Vt., has secured a patent for a new process for producing Spirits of Turpentine and other analegous oils directly from the wood, using for that purpose machinery as described in his application. A caveat for accomplishing similar results has also been recently taken out by a party resident in this State, through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. [The party in whose favor said caveat has been secured is requested to communicate with this office.]

KRUPP, the great steel manufacturer of Germany, is manufacturing cannon of immense power. They are 9-inch bore, made of cast steel, and throw a 300-pound shell of 22 inches in length, or a 450-pound shot, with a 50-pound charge.

STOVES made of soapstone have been introduced at Quebec. They are said to throw out mellower and more uniform heat than iron; the material of which they are made is very abundant in the mineral region south of the St. Lawrence.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent, And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction, and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both varnished or painted; the name of the inventor should be engraved, or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months	$10 00
On every application for a design, for seven years	15 00
On every application for a design, for fourteen years	30 00
On every caveat	10 00
On every application for a patent	15 00
On issuing each original patent	20 00
On filing a disclaimer	10 00
On every application for a re-issue	30 00
On every additional patent granted on a re-issue	30 00
On every application for an extension	50 00
On the grant of every extension	50 00
On appeal to the Commissioner from Examiners-in-chief	20 00
On every appeal to the Judges of Circuit Court, D. C.	25 00

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal, and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Patent Claims.—We will furnish, on application, the claim of any invention that has been patented within the last fourteen years. The name of the patentee, date of patent, when known, and two dollars for copying, should be sent.

Back Numbers.—We have a limited number of past volumes of the PRESS on hand, which will be sold, neatly bound, at reasonable rates. A portion of the back numbers of the paper can be had by the single copy.

THE LOST ARTS.

We bear a great deal about "The Lost Arts," and more about the "progressiveness" of the present age; but if we carefully look back upon the past we shall find abundant evidence that there is little, at the present day, that is new upon the earth. Where shall we find the Phoidias of modern days? How eagerly, and at what immense cost do we look for the paintings of the "Ancient Masters." Although our forefathers on the English isle, until within a comparatively recent period, never knew the luxury of window glass, the ancients knew more about it, in many respects than we do at the present day. It is even thought that the early Egyptians understood the uses of the telescope, and that the Pharaohs ogled each other with an instrument similar to what we call an opera glass. At all events, in moulding and coloring glass we are yet but imitators. In the manufactory of metals, for aught that we know, Tubal Cain might have been our superior. At all events in the most essential particulars of the manufacture of swords we are far behind the ancients.—The art of tempering steel, as known to them, has long been "a lost art." In the mixing of paints and colors, who in modern times can prepare a tint that will hold its color like that found upon many relics, which date their origin centuries before the dawn of the Christian Era, or who can rival or even equal the "Tyrian dye?" The idea of the steamboat, is thought to have been not entirely unknown anterior to the foundation of Rome, certainly the steam engine was not. Five thousand years ago the Egyptian Pharaohs' constructed canals, which to this day are without rivals upon the earth; and who at the present day, would take a contract to hew out and transport, overland, granite blocks that would weigh 3000 tons each, as was done by the ancient Thebans. The man that would undertake it certainly ought to be awarded the contract of raising the *Aquila*. Stevens, in his travels, tells us that he found railroads, built thousands of years ago with iron covered grooves. Animal magnetism is no new thing under the sun, and the arts of magic, as practiced by the ancients, must certainly be classed among "the lost arts." We might thus go on and fill a column or more, but enough.

Notwithstanding all this, the present is emphatically an "age of progress." The great distinctive feature between the present and the ages of antiquity is found in the utilitarianism of modern times. Formerly, as we stated last week, all wisdom was hidden in the bosom of the Aristocracy. Thanks to the printing press, which comes nearer to a new idea than any other thing of which moderns can boast, knowledge has come to be popularized. It has been dragged from the *sanctum* of the ancient priest, and alchemist, and been spread broadcast before the people. Christianity has introduced a new religion, a religion of the heart, and consequently a religion for the people, who have been lifted up, by it, from the condition of semi-brutes, and taught to know and respect themselves and to employ knowledge for the common benefit of all, instead of allowing it to be confined to a favored few, as a power to oppress the multitude.

When the modern discovers a principle, his first effort is to turn it to some practical account. When the ancient Egyptian discovered the power of steam his only idea was to make a toy of it. The ancient alchemist sought for principles in his art, merely for the purpose of gaining a new power by which to deceive and oppress his fellows; the modern chemist prosecutes his studies to benefit his race, and add material strength and power to the people. It is the successful effort of the modern to utilitarianize the knowledge that has come down to him, which makes all the difference between him and his progenitor of 3000 years ago. It is this idea that has produced the wonderful development in material progress which we witness to-day. Coupled, with this, as already stated, we have the ennobling tendency of Christianity. The two, guided by wisdom and humanity, may yet once more advance the human race to that proud position, "a little lower than the Angels," in which the Creator placed it, in the day that he looked upon all created things and pronounced them good!

Legal Assessment Notice.—An erroneous impression seems to have obtained, in the minds of a few, that the present law of this State requiring the publication of notices of sale of mining stock to be published thirty days, signifies that such advertisements should receive 30 insertions. This would not only be contrary to justice, but plainly in contradiction of the word and intent of the Act, and the plain and simple interpretation given similar orders requiring the publication of legal notices. Reference to the Statutes, with a careful consideration of the injustice of a law that would require mining companies in the interior to deprive local weeklies of support and patronage and bestow it upon distant city dailies, at double or tripple cost, will illustrate its outrageous character. It would be bad enough to oblige companies having offices in cities to incur unnecessarily heavy expenses for publication. The law is certainly plain enough for any honest minded person, yet to prevent quibbling, there would be no harm in the present legislature defining the manner of publication more extensively, and we shall look some for action in the matter.

Another Coal Discovery in British Columbia.—A new discovery of coal in British Columbia has just been verified. Its importance may be gathered from these facts: The land secured to the fortunate proprietors is not less than 500 acres of mining ground. From several seams in this, the coal, which is of good quality, can be quarried. A water front of ample extent has been also obtained for shipping purposes, and men seem only to be required, tools in hand, to vastly increase our supplies. The value of cheap fuel need not be mentioned in connection with the bulk of our poorer ores; it is the essential.

A Free Stock Board.—A Free Stock and Exchange Salersoom is to be opened in a few days at No. 614, Montgomery street, recently occupied as a German saloon. The saloon was closed out on Thursday for the above purpose. The company leasing the premises will charge no admission or initiation fee, but will collect a certain per centage off all sales effected in the rooms. None but brokers will be allowed to transact business in the room.

Govenor Low has appointeded W. A. Holcomb Commissioner of Deeds for Unionville, Nevada Territory. Mr. Holcomb is now serving a two years, term as Treasurer of Humboldt County; is assistant recorder, secretary of several rich mining companies, writes for the *press*, has a commission as notary public and is with all the rest an uprigbt, good fellow.

Correspondence.—Several of our valuable contributors failed to send their communications in season for the present issue. All correspondence intended for immediate insertion, should reach us early in the week. We desire your favors early and often, gentlemen.

MINING SHARE MARKET.

The mining share market still continues unusually active, Chiefly, however, in speculative shares. Orders for investment from the East have fallen off, of late, in consequence of the stringency of the money market; still, enquiries are now and then made from that direction, and the utmost confidence is expressed by eastern capitalists in the stability of our leading mining shares. Our own capitalists are also beginning to feel renewed confidence in many of our mines, and miss no opportunity to improve the advantages presented by new and important developments.

Ophir shares still remain comparatively quiet.—Nineteen feet have changed hands since our last report. Commencing at $1,585 on Saturday, they advanced to $1,900 at the opening of the Board on Monday, and gradually declined to $1,600, regular way, at yesterday's Board.

Gould & Curry shares have been but little dealt in. We notice but one transaction of four shares at $5,000 per foot, a decline of fifty dollars.

Savage shares still remain uncalled for to any extent. We notice but two transactions of one share each, the first at $2,800; the second, yesterday $2,775, seller 30 days. Holders firm at $2,850. We omitted, in our last, to notice a dividend of $50 per foot declared on the 6th instant.

Challar has been unusually active since our last report. We quote sales of 1060 shares (265 feet) upwards of one fifth of the entire number. Monday's sales opened at $600, b 30; gradually declined to $275 on Wednesday, recovered to $460, b 30, on Thursday, and closed yesterday at $430, with a weak market. Several causes have contributed to the sudden and important depression of this stock. Report says that the ore in the lower part of the mine, is not looking as well as formerly; but the chief cause of the decline is doubtless attributable to the large amount of hypothecation which has been effected in this stock.

The Lady Bryan still continues to form an important feature in the market. Sales of 1409 shares have been reported since our last quotations, at slightly declining rates, against 3723 shares, which found a market last week. It is reported that richer ore than ever, is still being taken from the locality of the recent strike, and furthermore, that rich ore has also been struck in the main shaft, at a considerable distance from the former locality. The prospects of this mine are certainly very flattering.

The Desert, the adjoining claim to the Lady Bryan, has not been so much enquired for as last week.—Considerable business has been done, however, in this stock. We quote sales of 491 shares, against 1163, reported for the week previous to our last issue. The market opened on Monday at $17, speedily advanced to $26, and closing at $24; gradually declined, with decreasing sales, to $20, on Tuesday. No sales on Friday.

Burning Moscow has recovered from its last weeks' decline and is again largely enquired for at an important advance. It opened the market on Saturday at $95, and advanced at the close to $115; gradually advanced to $142½ on Thursday, but yesterday declined to $120 @ 130, b 30 days.

North American has not been so much in demand as last week. The advanced rates of previous quotations, however, have been fully sustained. We understood that this company has struck the lead in their main shaft which is located within 150 feet of the Uncle Sam, and full confidence is entertained by holders that they will eventually find the lead equally valuable.

Adriatic shares are still in favor, and are quoted at from $11 @ $13.

Bullion, Gold Hill, has improved somewhat, and has fluctuated at from $66 @ $80 b 30.

We quote the Melones at from $62½ @ 67½; Baltic has been considerably enquired for, and has fluctuated from $120, to $170.

We quote Norton at $8½; Caledonia tunnel at $31; Michigan at $45, b 30; South Burnside at $64¼; El Dorado at rates fluctuating at from $50 @ $70.

Uncle Sam has found buyers at from $550 @ $575; Baltimore American is quoted at from $35 @ $40; Buckeye $13 @ 16; Daney is inactive; Lucerne $28.

Harmon, El Dorado Co., is inactive. We quote at $15; very encouraging reports are received from this mine, giving ovidcnee that it is ably and judiciously managed.

Real del Monte shares have formed quite a feature in the market the past week, and have changed hands very freely, generally at about last quotations. Nearly 400 feet have changed hands during the week. Sales were made quite freely during the early part of the week at from $320 @ $360, subsequently shares declined to $240 @ $275. We are not advised of any reason for the decline of yesterday. The new mill of this company has been put in operation and works admirably. They have several hundred tons of very rich rock on hand at the mill. A compromise of all adverse claims has been effected without any increase of the capital stock, and it is confidently expected that the company will soon be able to commence declaring dividends.

The Antelope has advanced materially over recent quotations, and is now held firmly at from $250 @ 275. We notice but one transaction the past week, and that at $252½, some $30 over last quotations. Their mill will soon be completed, and will be scarcely inferior to that of the Del Monte. The claim is one of undoubted richness, and further advance in these shares may soon be expected.

The Evangel, devoted to the Baptist interest, is one of the choicest of religious family newspapers published in this city.

By order of the Board of Trustees. M. G. ELMORE, Sec.

San Francisco, January 11, 1863.

Mount Eden Mining Co.—Notice is hereby given; that the Board of Trustees of the Mount Eden Mining Company, at a meeting held January 2d, 1864, levied an assessment of One Dollar on each and every share of the Capital Stock of said Company, said assessment payable immediately in gold coin to the Secretary, at the office of the Company, No. 620 Washington street, Room No. 3. H. B. CONCDON, Secretary.

San Francisco, January 16, 1864. 3-5t

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

A. S. HALLIDIE & CO.,

WIRE ROPE MANUFACTURERS.

Established 1857.

Office, No. 412 Clay street—Works, North Bench,

SAN FRANCISCO.

After seven years' use throughout the State of California and the Pacific Coast generally, we can confidently recommend Wire Rope for

HOISTING FROM DEEP MINES,
GUY ROPES FOR DERRICKS, &c.,
STANDING RIGGING FOR SHIPS,
FERRY ROPES FOR FERRIES,
SASH CORD FOR WINDOW SASHES,
ETC., ETC., ETC., ETC., ETC., ETC.,

It being Cheaper, Stronger, Lighter and More durable than any other kind of Rope, and not stretching or shrinking by atmospheric changes.

MINING COMPANIES, by using it for Hoisting Purposes, save 66 per cent. on their outlay for other ropes.

Wire Fencing Strand,

For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired. Pamphlets, containing weight, strength and price, forwarded free on application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3in

The new, fast and Splendid Steamship

AMERICA,

THOMAS H. MORTON.....Commander,

Will be despatched for Panama on WEDNESDAY, February 3d, 1864, from Mission street Wharf, San Francisco, at 9 o'clock A. M., connecting, via Panama Railroad at Aspinwall, with the steamship

Illinois (2,500 Tons) for New York.

Passengers are landed immediately on arrival at Panama, by the Railroad Company's Steamboat. The Company have also wharf facilities at Aspinwall. A Baggage Master will be sent on each steamer. For further information or passage, apply to

I. K. ROBERTS, Agent,

3. 407 Washington street, opposite Postoffice, S. F.

The Ophir Co. vs. the Burning Moscow--Application for Injunction--Decision of Judge North.

This application is made upon the complaint and a large number of affidavits introduced by plaintiff. The answer denies the equities of the complaint, and a large number of affidavits are introduced by the defendant, directly controverting the important facts alleged by the plaintiff. The plaintiff claims the ground on which the defendant is at work, (and from entering on which the plaintiff had been enjoined by order of the court,) by virtue of a purchase of what is known as the middle lead, lying west of the Comstock. It further claims to own the Virginia lead and all lying between the Virginia and Comstock ledges. The defendant denies these several claims of plaintiff, and elaims the ownership of the middle lead, to wit: the Moscow, the Harrison and Lacrosse, and claims to be working on its own ground, and not on the ground of the plaintiff.

For the purpose of deciding this application it is unnecessary to pass upon the location of or title to the Comstock, Virginia or Moscow ledges. There seems to be no doubt as to the fact that the plaintiff has the genuine title to the middle lead, or that the defendant is in the peaceable possession, under claim of title, on the ground which is at work. There is, however, a question between the parties as to what is included in the middle lead purchased by plaintiff.

It is unnecessary, for the remarks we propose to make, to copy the entire decision of the Judge in the above entitled cause. That decision has already been widely circulated in the commercial papers; and no doubt perused by most of our readers. It is sufficient for our purpose to remark that the same peculiarity noticed above with regard to the use of terms, characterises the entire document. After carefully reading it through we were much impressed with the apparent ability of the decision, with but one small exception, and that, by the way, may prove when explained (if capable of explanation) rather important. The learned Judge uses the terms Lead and Ledge, and the Ophir Co's legal advisers apply for an injunction to prevent the Moscow Co, working on their Middle Lead.

Now what do they mean by the words Lead and Ledge which are used indiscriminately by the Judge? Are they one and the same, or do they mean portions of a mettalliferous vein? or a lead of gravel? or a ledge of rocks? or the vein itself? Whatever it may be, one thing is certain, the use they make of those words show the want of a rudimentary knowledge of mining, and no correct idea on the part of the lawyers of what they are asking, or the Judge of what he is deciding upon. If the Ophir Co., wished to prevent the Moscow from working on the middle part of their vein, then the application would have been a sensible one; but if otherwise, the Ophir Company were *very badly advised*, being an admission on their part of the existence of a number of parallel veins, which if we are rightly informed was what their own witnesses denied; affirming that the masses of porphyratic rock named in the Judge's decision, did not extend with any regularity even to the second gallery, and that the works of the Moscow Co., were on a continuation North of that part of the vein which had proved so productive in the South Ophir and Mexican mine.

The law proceedings are similar to the early timbering of their mine, the insufficiency of which was only equalled by its costliness, and which soon caved in, not being able to bear the weight of its own refuse material. Applications like that of the Plaintiff are admirably calculated to please the Stock Board and put larger fees into the pockets of the lawyers. However we are inclined to think that a little wholesale bleeding of these large and plethoric companies cannot do the Territory much harm.

California Cloth for the Russian Navy.—The Mission Woolen Mills, of this city, are now manufacturing a considerable quantity of blue woolen cloth of a particular character, to fill an order given by the commander of the Russian fleet in the Pacific.

On Tuesday morning of last week, in Nevada, John Carlin was instantly killed by the falling of a portion of the Bailey house.

OUR HARBOR DEFENCES.

Should the *Alabama*, or any other craft with hostile intent, attempt to poke her nose into the harbor of San Francisco, she would most assuredly meet with a pretty warm reception. To say nothing of a formidable armament at Fort Point, if a ship should succeed in passing that fortification she would have to encounter a fire from Alcatras, the weight of which may be judged of from the following account of its armament: Batteries for thirty guns have been built during the past summer. Eighty guns were mounted previously, consisting of 8 and 10 inch, and 24 pound field howitzers. The armament of the fortification is shortly to be increased by far heavier guns, which are now on their way thither *via* Cape Horn. These consist of four 10-inch Rodman guns, and one hundred and ten 10-inch and 13-inch guns of other descriptions. A 15-inch gun is to be mounted on the North side of the island, the foundation for which is already completed, It is probable that the two 15-inch guns belonging to the *Comanche*, now "in soak" in our harbor will soon be redeemed from old Neptune, so that if occasion should require, they might be made to do good service, temporarily, from Telegraph Hill, or Rincon Point. There is very little danger to be apprehended to this city from a visit of the Alabama, or any other Confederate cruiser in the waters of the Pacific. The chief detriment to our interest would arise from the dangers to which our commerce would be exposed on the ocean.

The Russian Admiral and the Comanche.—The Russian Admiral Popoff has tendered to the agent of the New York underwriters the use of four complete sets of diving apparatus, with experienced divers to work them, and whatever force of men from his crews as is necessary to work the apparatus, for service in raising the Aquila, or recovering the Comanche This generous offer will be accepted if it should happen that the next steamer does not bring out the means of raising her, from New York.

Another Rich Copper Discovery has recently been developed, near Sault Ste. Marie. An incorporated company has been organized to work it, and one-fifth of the whole stock has been sold for $30,000. The company has been made up by gentlemen of capital and enterprise in Detroit, so that the speedy development of the richness of the discovery is redered a matter of certainty.

Broke Her Shaft.—The P M. S. S. Co.'s steamship Constitution broke her shaft while coming down from Benicia, on Monday. The Orizaba took her place, for Panama, on Wednesday. The Company have a duplicate shaft ready at Benicia, to take the place of the broken one.

More Coal in Nevada Territory.—It is stated that a new coal field, of large extent, has recently been discovered in Nevada Territory, about eighteen miles north of the newly-discovered mines in the Desert District.

New Railroad Pass.—A new pass, called from the discoverers "Leonard and Miller's Pass," has been found out in the Sierra Nevada, in the Kern River country.

Against a Change.—The Governor has transmitted a special message to the Legislature in relation to the financial condition of the State, in which he takes strong ground against a change in the currency.

The Rocky Mountain News tells us that Wm. H. Russel, Esq., has organized a mining company in New York, with a capital of $2,200,000, for operations at Central and Empire Cities. All his mining property at both places is put in. Six hundred thousand dollars is to be paid in at once in cash, and Mr. Russel will return in a short time as the Superintendent and Manager of the business.

Mexican Dollars have rated at 9 @ 12 per cent premium, in this city, during the past year.

Esmeralda.—The *Aurora Times* of January the 8th., furnishes the following:

The Jennie Johnson Company, on Last Chance Hill, are working their claim vigorously. Two shifts of hands are employed day and night. The Jennie Johnson is located a short distance west of the Crockett Company. Their shaft is down 117 feet, and excellent looking quartz has been found, showing gold to the naked eye.

The Shenandoah lode is near the Jennie Johnson. The Company are sinking a perpendicular shaft, and are down about 75 feet. Their prospects are exceedingly good.

The Crockett has an old-established reputation. It is being worked steadily. Stock in this company commands a good figure.

The Hibernia Consolidation on Middle Hill, has five lodes or ledges. The main ledge upon which they are sinking, is ten feet wide. The company has got a shaft down about 50 feet; and another contract is let for sinking 50 feet more.

The Maryland Tunnel, owned by the Gibraltar Company, on Silver Hill, is running in above the celebrated Yancey ledge. The tunnel has been driven in 150 feet. A new contract was given out the other day for 100 feet further. At a depth of 125 feet the Company run through a blind ledge, but have not yet reached the lodes to strike which it was located.

The Maggie Green, also on Silver Hill, are down some 75 feet, and have a contract out for 25 feet further. This Company have a four foot ledge. Their rock now shows both silver and gold. The claim is being worked every day.

The Hidalgo Company, which we mentioned a few days ago, are pushing along finely. They have a good four foot ledge, and the claim is undoubtedly a good one.

The Yancey, Cary, Iowa, Comstock, and other rich claims on Silver Hill, are reserved for another occasion.

The Daylight Tunnel Company's claim is located on Silver Hill, to the west of the Iowa, and the work upon it is now being carried on with energy and success under the superintendence of Mr. Jacks. The ledge shows a surface of about three feet, and is very rich. We were shown some rock taken from it this morning, which equals any from the crack leads of the district, gold being visible through it to the naked eye.

From small lot of rock crushed from the Bamboo claims, recently, the yield was 68 ounces. Rock not selected

Our citizens have been enjoying remarkable fine weather for this season of the year. At present the sun shines warm and pleasantly during the greater portion of the day. Thus far we have had a mild open Winter; too much so for the good of the place.

Arizona Mines.—A letter in the *Alta*, from New Mexico, says:—

"The new gold mines are situated on the Gila and Francisco Rivers, about two hundred miles from Tucson, and about the same distance from Fort Yuma; they range from the Colorado to the Gila, and are about 120 miles form the Pimos villages, in a northwest direction. Persons who have been there say they are similar to the diggings of California in early days. The miners are working with rockers; some dry-washing. Charles Brown passed by this place the other day with 24 pounds of the "ore;" he gave me a small specimen worth about $12; the gold is worth $19 35 per ounce. It is coarse gold, and the smallest of it is about like the largest of Pleasant Creek (Southern Oregon) gold. He accumulated his 24 pounds in about two months. Brown is an old Californian, and says that these diggings will turn out richer than the placer diggings of California. All the white teamsters in the outfit have gone there. If you have any idea of trying the locality, start about the first of June.

Beautiful.—The Gold Hill *News* of January 6th has the following poetic item: A bright sun and dense fog united this morning in making a mirage that could not be excelled in beauty. The valleys away to the east were made to assume the appearance of a vast and troubled sea, while the high hills looked like islands. The illusion was so perfect that one looking on the scene might almost fancy that he heard the roar of the waves as they dashed against the headland.

If you ever saw a crow with a king-bird after him, you have an image of a dull speaker and a lively listener.

ENLARGEMENT
—AND—
Important Improvement
—OF THE—
MINING AND SCIENTIFIC PRESS.

Enlarged from Eight to Sixteen Pages at the Commencement of Volume VIII, January 1st, 1864.

TWO VOLUMES (OF 416 PAGES EACH) PER ANNUM.

PUBLISHED EVERY SATURDAY.

SUBSCRIPTION TERMS IN ADVANCE:

One Volume, six months,.....$3.00
Two Volumes, one year,.....5.00
Five Copies, one year,.....20.00

The present proprietors of this journal announce with confidence their determination to render to the friends of Science, Mining and Mechanical Industry a newspaper published upon this coast worthy of their patronage at home and their pride abroad. We shall seek favors only through our endeavors to merit them.

The Editorial Department

Will be conducted with ability, in a liberal and reliable manner sparing not in expense, veneration for honesty, or respect for common sense.

Competent Correspondents

Will be employed to furnish us full and reliable information concerning newly-discovered mines; and through vigilant efforts we shall secure for our readers the latest intelligence from all important mining localities. In our list of

Occasional Contributors

We have the privilege of numbering gentlemen ranking among the most talented and experienced writers who manifest a prominent interest in the progress of Art and Science upon this coast, including the names of

PROF. J. B. WHITNEY, DR. T. M. LOGAN, DR. J. A. VEATCH, REV. O. C. WHEELER, M. ATWOOD, J. H. CHURCHILL, A. M., A. B. PAUL, H. S. BROOKS, W. WADSWORTH, T. PRICE.
PROF. W. H. BREWER.

Illustrative Drawings and Engravings

Superior in finish and useful and attractive in character, will be published from time to time, representing the most important new inventions and improvements in the art and science of

Mining and Mechanism

Developed upon this Coast. Each number of the paper will contain full and correct reports of

Sales by the Stock Boards of San Francisco.
Sales by the Stock Board of Virginia City.
Sales by the Stock Board of Esmeralda.
Sales by all Mining Stock Boards.
Reports of Bids and Sales in San Francisco.
Reports of Bids and Sales in the Territory.
A Weekly Review of the Stock Markets.
A Weekly Review of General Mining Interests.
General Summary of California Mining News.
General Summary of Mining everywhere.

Valuable Information for all Miners.
Indispensable Knowledge for practical workmen,
Practical Suggestions for intelligent artizans.

Valuable Facts and Statistics

Essential to members of all trades and professions; the best approved methods of mining; the latest discoveries and inventions in mining operations; practical, scientific views upon geological and mineralogical questions; the proper methods of reducing ores and saving the precious metals. In fact every sentence calculated to lessen the number of hard blows uselessly rendered by miners and working men, and add wealth by intelligent saving of material or labor, will find welcome space in our columns. The paper will afford many

Practical Hints

With regard to the manner of working and securing mines, derived from the actual experience of parties in our own and other countries. Also hints concerning the location and possession of mining grounds; the laws peculiar to different districts and countries; and notices of all important decisions of the law in mining cases. As a

Book of Reference

The bound volumes of the PRESS will find no rival in value to the intelligent and industrious citizens of the Pacific Coast, who cannot but feel a source of pride in the history of the inventions, discoveries and prosperous developments of the remarkable era through which we are now passing.

The Stock Record

As presented in our columns will be found correct, distinct and most convenient for preservation and future reference.

For Sending Abroad.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and Newsdealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

DEWEY & CO., Publishers.

OFFICE in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

SAN FRANCISCO U. S. BRANCH MINT.—The following report of the deposits and coinage at the mint in this city during the year 1863, is given from the statement of the Superintendent. The amount of gold and silver deposited and coined during each month was as follows:—

	GOLD DEPOSITED.	GOLD COINED.	SILVER COINED*	G. AND S. COINED.
January	$568,614 28	$470,000	$141,818 66	$604,318 05
February	243,397 06	250,000	47,628 71	297,628 71
March	1,016,554 13	745,000	87,827 00	832,827 00
April	1,853,559 83	1,710,000	75,691 88	1,785,691 88
May	2,329,341 77	2,170,000	36,788 68	2,206,708 63
June	2,449,800 66	2,345,000	51,368 06	2,395,368 06
July	1,957,156 67	2,440,000	103,455 04	2,543,455 04
August	1,855,459 31	1,832,000	35,632 77	1,867,632 77
September	2,490,141 78	2,530,000	21,000 00	2,551,000 00
October	2,357,606 38	2,355,000	34,309 17	2,389,309 17
November	1,741,137 62	1,835,000	26,000 00	1,861,000 00
December	285,246 61	1,071,400	44,000 00	1,115,400 00
Totals	$19,208,056 10	$19,543,400	$707,019 07	$20,251,419 97

*Coined and refined.

Amount of Double Eagles coiaed during the year, $19,331,400; Eagles, $100,000, Half Eagles, $85,000; Quarter Eagles, $27,000; Half Dollars, $458,000; Dimes, $15,750; Half Dimes $5,000.

Silver Bullion received during 1st quarter, $289,021 50; 2d quarter, $347,683 52; 3d quarter $173,129 58; 4th quarter. $71,812 11. Total, $981,646 71. Gold Bullion received from other localities than California during the year: Oregon—ozs. 143,281.87. British Columbia—ozs. 22,912.86. Nevada—ozs. 735,40. Mexico—ozs. 774.63. Mixed coins—ozs. 1886.4.

PETROLEUM AS FUEL.

Experiments have been in progress in various places for sometime past, having for their object an examination into the economy of employing Petroleum for fuel—especially for generating steam in sea going vessels, where bulk is a serious consideration in the matter of fuel. The most elaborate of this class of experiments has probably been that instituted by the Navy Department of our Government. Some six months since a commission was appointed to determine the practicability of using the above mentioned and other hydro-carbon oils for the purpose of generating steam. After five months of careful experimenting, the telegraph has briefly announced the result, which goes to show that the employment of Petroleum exhibits a great saving as compared with coal, bulk, weight and cost being considered. The commission states that steamers can be kept at sea, and under steam, a much longer time, and with less labor, and at less cost than by the use of coal.

The full report will probably be received by the next steamer, and will doubtless be read with much interest. Should these anticipations be fully realized, upon a more extensive application, and the use of Petroleum, in its crude state, come into general use, a new era will dawn upon the progress of both the merchant and war steam marine of the world. The amount of hydro-carbons on this coast are almost illimitable, and fully commensurate with the vast demand there must soon be for them in this portion of the globe, on the above supposition. We have a series of facts, interesting in this connection, which we propose to give when we have the full report of the commission before us.

LIBERAL.—The P. M. S. S. Company, during the past week, made the liberal monthly subscription of $500 to the Sanitary Fund. The treasurer of the company, moreover, was authorized to draw his check at once for the entire sum of one year's subscription in advance—thus putting $6,000 into the Sanitary Fund at a most timely moment.

AN exchange says:—Pronounce Chickamauga thus: Chic-a-may-*u*-ga, and you will have the correct pronunciation.

A mansion, completely furnished, was presented, to Bishop Simpson, of the Methodist Church in Philadelphia, on Thanksgiving Day. The mansion is double, with side parlors, each illuminated with six light chandeliers, a hall and vestibule in the centre, extensive back buildings, fine library, sitting room, reception room, etc,

Stewart, the New York merchant prince, will sell $30,000,000 of goods this year. The September sales of cloths for men's wear alone were $700,000, and for the last year in that department alone will be from six to seven millions.

It is estimated that over $100,000,000 in greenbacks are hoarded and in use in the South and Southwestern States, and there is said to be a continual flow of them in that direction for the purchase of cotton and other produce.

Struck it.—We are reliably informed that the Pennsylvania Company, at Brown's Valley "struck it" on Friday—that is, found at the depth of 160 feet much richer rock than formerly. Good cheer for the Pennsylvania.—*Marysville Appeal.*

If you have a trouble, keep it to yourself. A jolly fellow can raise a half eagle any time. A dismal individual, on the contrary, would not negotiate a loan of one and ninepence, if his life depended on it. Be cheerful, therefore, for your own interest.

Poverty is the only load which is the heavier the more loved ones there are to assist in supporting it.

Talking shapes our thoughts for us; the waves of conversation roll them as the surf rolls the pebbles on the shore.

The Hartford ladies have set the example of discontinuing the practice of sweeping with their dress-Skirts to the ankle and balmoral boots are the style.

A few days since a miner named Anderson Claud was crushed to death by a cave of earth in his claim, on Goodyear's creek, Sierra county.

The total value of taxable property in Gold Hill, N. T., is $2,570,243.

Rockland, Maine, has furnished three Generals for the army—Berry, Ames and Tillman.

"In wine there is truth," says the Latin proverb; but the Chemist have discovered that wine is adulterated with *lye.*

If there is a heaven on earth, it is on a soft couch by your fireside, your wife on one side, and a smiling baby on the other, a clear conscience, and a knowledge that you are out of debt, and don't fear the Sheriff.

The Marquis of Westminister's income is $5,000 a day, and that of the four leading Rothschild's $1,000 an hour! Precious hours, those.

An "Irish Gintlemau," perhaps a king, has been discovered by some laborers near Dromeliby, Ireland. His stone coffin was nine feet long.

An irritable man is somewhat like a hedgehog rolled up the wrong way, and pierced by his own prickles.

The Chinese in Placerville are building themselves a temple.

In San Francisco, greenbacks are worth 2½ cents more per dollar than in New York.

The Catholics of Mokelumne Hill are about to erect a large new church at that place.

The San Juan *Press* says that the Sonora *Flag* is to be removed to San Francisco, and issued as a daily evening paper.

The Cashmere goat furnishes but three onnces of wool to a fleece, and it requires some half dozen fleeces to make one shawl.

It is said that while the shoes of the white soldiers range from No. 5 to No. 11 in size, those of the negro regiments will range from No. 11 to No. 15. These are the chaps to tackle the rebellion and put their foot on it.

The columns of a newspaper often support the world's greatest temple domes; no blind Samson should ever get within arm's length of them.

"Where is the east?" inquired a tutor one day, of a very little pupil. "Where the morning comes from," was the prompt and pleasaut auswer.

Some of the English peasantry took the recent earthquake as a sign that the world was coming to an end, and packed up to emigrate to America to avoid the calamity.

Remarkable Phenomena.—Early on Wednesday morning last, a flour-mill was seen "running" at a rapid rate on Pine street. "driven" by an engineer. The strange sight, it is said attracted many spectators.

A youth with a turn for figures had five eggs to boil, and being told to give them three minutes each, boiled them a quarter of an hour altogether.

509 Sacramento street, near Sansome.

HEPBURN & PETERSON'S.

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machines now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zophyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

nov8 3m* HEPBURN & PETERSON.

TREMONT HOUSE.

S. gold coin. By order of the Board of Trustees
EDW. BARRY, Sec'y.

Fair Haveo Gold and Silver Mining Company, Cortes District, Reese River.—At a meeting of the Trustees of the above Company, held Dec. 29th, 1863, an assessment of Seven Cents per share was duly levied and made payable immediately at the Office of the Secretary, 400 Front Street.
W. H. DANIELS, Secretary.

Hudson Gold and Silver Mining Company, (Devil's Gate District,) office No. 804 Montgomery street, San Francisco, December 19th, 1863.—At a meeting of the Board of Trustees of this Hudson Gold and Silver Mining Company, held this day, December 19th, 1863, an assessment of One Dollar per share was duly levied on each and every share of the Capital Stock in said Company, due and payable immediately, in United States gold coin to the Secretary, at the office of the Company, in this City, or to A. W. Hale, Esq., Superintendent, at Virginia City.
j2-1m I. LAWRENCE POOL, Soc'y.

Sarah Frances Gold and Silver Mining Company, Markleville.—Assessment No. 7. of Fifteen Cents per share, was levied by the Board of Directors, December 28th, 1863 payable to FRANCIS V. SCUDDER, Sec'y.
Rooms of the Company, 9 and 10, northeast corner of Montgomery and Pine streets. j2-1m

Scorpion Silver Mining Company.—Notice is hereby given, that by a resolution adopted by the Board of Trustees of the Scorpion Silver Mining Company, at a meeting held on this day, an assessment of twenty-five (25c.) cents was levied upon every share of the Capital stock of said company, to be paid in gold coin of the United States, on or before the 29th day of January, 1864, at the office of the company, No. 617 Clay street.
W. H. MARTIN, Sec'y.
San Francisco, December 29, 1863. j2-1m

Conqueror Gold and Silver Mining Company.—Office southeast corner of Front and Sacramento streets, San Francisco December 29th 1863—At a meeting of the Trustees of the Conqueror Gold and Silver Mining Company held this day, an assessment of Twenty-five (25c.) Cents per share on each and every share of the capital stock of the said Company was levied, now due and payable immediately in U. S. gold coin, to the Secretary, at the above named office. By order of the Board of Trustees.
j2-1m WM. W. KNIGHT, Sec'y.

Carrie Copper, Gold and Silver Mining Company.— The First Annual Meeting of the Stockholders of the Carrie Copper, Gold and Silver Mining Company, will be held at the Company's office, No. 528 Clay street, on MONDAY, February 1st, 1864, at 3 o'clock P. M., for the election of officers and the transaction of such other business as may come before it. (1-1m) B. W. MUDGE, Sec'y.

Puritan Gold and Silver Mining Company, (Devil's Gate District, N. T.)—Notice is hereby given that the Trustees of the Puritan Gold and Silver Mining Company have this day levied an assessment of one dollar on each and every share of the capital stock of said company; said assessment payable immediately in gold coin to the Secretary, at the office of the company, No. 623, Washington street. H. B. CONGDON, Secretary.
December 26, 1863. 1-m

Bullion Gold and Silver Mining Company, Van Horn District.—Notice is hereby given that a meeting of the stockholders of the above named company will be held at the office of the Secretary, at 7 o'clock on MONDAY EVENING, the 25th day of January next, for the election of officers, and the transaction of other legal business. By order of the President,
San Francisco, Dec. 19, 1863. (2-m) T. L. BIBBINS, Sec'y.

RELIABLE ASSAYS can always be obtained on application to J. H. Churchill, Government House, San Francisco.

WHEELER'S
Amalgamating and Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

Mining and Scientific Press.

A Mining Journal--Devoted to News, Art, Science and Progress.

VOLUME VIII. SAN FRANCISCO, SATURDAY, JANUARY 23, 1864. NUMBER 4.

INDIAN BAR COPPER MINES.

In the "Mining and Scientific Press" of the 9th inst., allusion is made in the letter of your traveling correspondent to the Indian Bar mining district, and it is my impression that your valuable journal is the first and only paper that has presented to the notice of the public the importance of that section of Tuolumne county.

Being perfectly familiar with the Copperopolis series of veins, having traveled over the same from Calaveras to Mariposa county, I agree with your correspondent in the belief that the veins of this district and its immediate vicinity are the continuation of the Copperopolis veins.

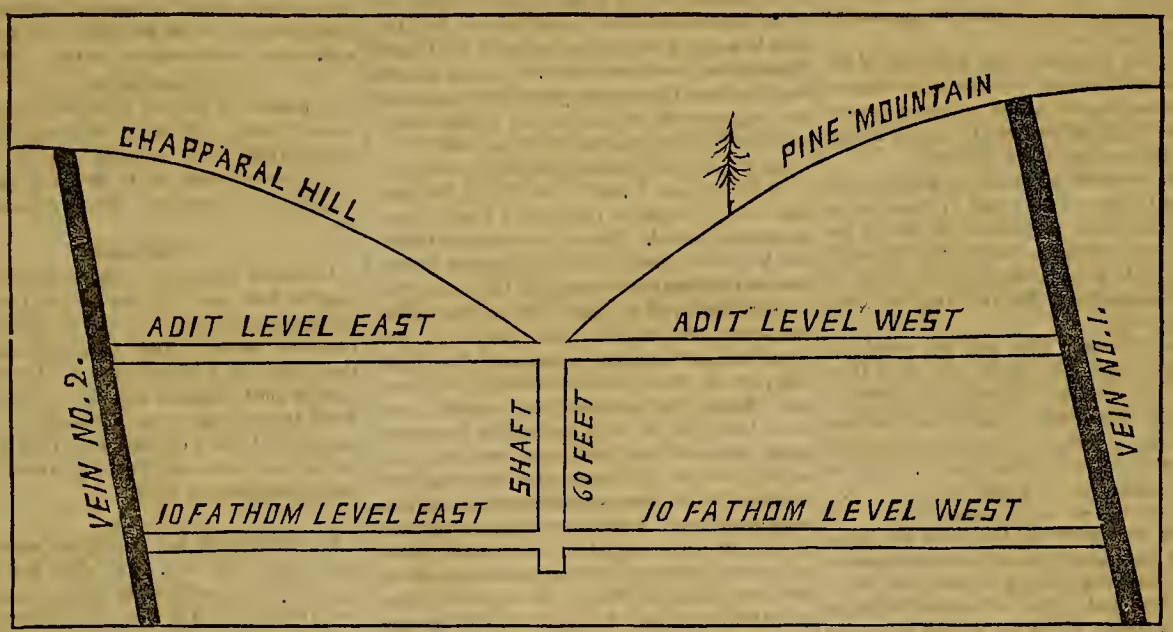
The mining district of Indian Bar properly comprises both sides of Tuolumne river, and is situated between Jacksonville and Don Pedro's, being nearest to the latter place, and embraces a width of about one and one-half miles from the easternmost to the most westerly ledge. By the present route of travel it is some four miles from the Crimea House. The Crimea House is about fifty miles from Stockton, located directly upon the main road to Sonora and at the junction of said road with the road to Don Pedro's and Coulterville. The great number of teams passing over this road and its proximity to the mines furnish unusual facilities for the transportation of ores to Stockton, at a cost not exceeding the usual rates to that city from Copperopolis.

In enumerating the *veins* or *leads* at Indian Bar we will commence with the most easterly, the "Anderson" lead, so called from its discoverer, and then pass to the following *parallel leads* which lie to the *west* of the "Anderson," in the order named: "Bull Dog No. 1," Indian Bar No. 2," "Indian Bar No. 1," "Copper Bottom," the "Montauk" and the "Copper Mountain"—these, it will be borne in mind are the ledges.

A portion of the first named lead, the "Anderson," is claimed and has been partially work by an unincorporated company known as "The Deep Cut Company"—to the north of whose claims, is located the "Lady Franklin," incorporated and owned in San Francisco; tunnel in some 75 feet or more, running obliquely towards the vein but not sufficiently to strike it; work suspended for the present; indications good. Upon the next two parallel leads we have the "Independent" company and the "Bull Dog Mining Company," the first unincorporated, no work done; the latter incorporated and the stock principally owned in Sacramento. Considerable work has been done here by tunnel in a vein some twenty feet wide or thick; and a shaft started near the mouth of the tunnel which at a depth of seven feet shows pure looking rock well filled with the yellow sulphurets of copper. This company is not at work, although the prospects certainly are flattering.

The "Indian Bar Company" and the "Washington Mining Company" are located upon the next two parallel leads. The first is not incorporated; the company have expended considerable money and there is no doubt, have a valuable location, with well defined veins. The following regarding the "Washington" is in part applicable to the "Indian Bar."

The "Washington Mining Company" claim 4,500 feet each upon Indian Bar No. 1 and Indian Bar No. 2; was incorporated in February, 1862; stock held principally in San Francisco, divided into 4,500 shares. This company have worked the most steadily of any in this district, have a good dwelling house some 25 by 25 feet, and are still at work sinking at the end of adit level east as shown in the diagram:



PLAN OF THE WASHINGTON COPPER MINE, INDIAN BAR, TUOLUMNE COUNTY.

From the report of the engineer we make the following brief quotation explanatory of the accompanying illustration:—

"Prefatory to the explanation of the proposed plan for proving the mining grounds owned by this company, it may be well to state, that the company own four thousand five hundred feet upon the leads, which are upon the east side of the Tuolumne river, at Indian Bar, in Tuolumne county. I consider the location of this mine, for accessability and convenience of working, the best upon the leads. The company's claim covers a width of one thousand feet, and Bull Dog gulch, to the south-east of the company's location, reveals seven veins or spurs in the above width. These spurs probably unite with the main leads, or it may be connected with or belong to a third vein. The lead No. 1 in the diagram is known as the Indian Bar vein No. 1, and the vein to the left as Indian Bar vein No. 2.

The plan, a diagram of which is furnished above, will in the lowest tunnel (ten fathom level) prove the vein at a depth of about ten feet below the present

level of the river, or a few feet deeper than the prospecting hole made in the vein, where first discovered, and from which rich specimens were taken.

That the company possess a valuable location there can be no doubt, and a few months labor will prove the same. The proposed levels or cross-cuts will be about three hundred and fifty feet in length from vein No. 1 to vein No. 2; and if a portion of the spurs or feeders, seen in the gulch referred to, belong to a distinct lead, we shall be likely to prove the same in our tunnels."

The adit level east cuts the chapparal hill vein at a depth of about 70 feet, and the Pine mountain vein will be cut at a depth of about 100 feet by the west adit level, when the same is completed.

Vein No. 2, which was seven feet thick on the top of Chapparal Hill, was found to have narrowed to about two feet in the end of the adit level east, but is now gradually widening again, and within a few days the Superintendent has sent forward some samples of the rock from this point, of a highly gratifying character. Adit level west has been drifted about two-thirds of the distance towards the vein. Work in this level has been suspended for the present. There is no doubt that when the shaft reaches the water level the vein will be found well filled with copper. That this is not an unreasonable expectation, it may be well to state that the river, which pursues a very crooked course in this neighborhood, flows over or crosses nearly all the veins in the district, and the veins where so crossed by the river show copper quite abundantly. We have samples from the Anderson, Bull Dog, Indian Bar, Copper Bottom, and Montauk ledges, taken directly from the surface, either of which would be pronounced fine specimens of ore.

It is of great importance that some one of the claims at Indian Bar should be sufficiently prospected to prove the character of the veins at the proper depth, as we think success would be certain, and the success of one company would inspire all.

Parties or companies here should sink at once, and not attempt to prove their claims by tunneling, as sufficient back cannot be obtained in most of the locations in the district to warrant that system of prospecting. At some future time we will furnish further information as to the Bull Dog and other claims hereabout.

In closing, we would state that fine samples of copper pyrites have been taken from all of these leads, and in no district that we have visited are there more or better surface indications; but comparatively little work has been done, and but a limited amount of money expended—both of which are required to prove a mine. Yours, etc., S.

The New Substitute for Coal.—In the discussions which have recently taken place with regard to the practicability and economy of using coal oil for fuel, it has been made to appear that about 50 gallons of oil are equivalent to one ton of coal when used for fuel, in making steam. The above specified amount of crude coal oil, the form in which it is proposed to employ it for that purpose, can be delivered upon the Atlantic seaboard quite as cheap, if not cheaper than a ton of coal. The difference in the bulk and weight of the two, and the greater facility with which a cask of oil can be handled must create a vast preponderance in favor of the oil. Speculation, in this connection is also rife with regard to the probable utility of the famous asphaltum lake in the Island of Trinidad. It is said that this lake is capable of producing 300,000,000 gallons of oil, which would be equivalent to about *seven million tons of coal.* It would also furnish a convenient fuel station for many sea-going steamers. The resources of California in this class of material is immense and inexhaustible. Consumers, we think, may reasonably expect an important advance in the prices of coal oil within a short period.

Napoleon said "bayonets think." A cotemporary pointedly adds—"Few thinkers have so much keenness, point and penetration as they."

Correspondance.

[Written for the Mining and Scientific Press.]

Chinese Camp and Jamestown.

BY OUR TRAVELING CORRESPONDENT.

Mr. Editor.—Before I resume my reports of the mines, permit me to congratulate you upon the New Year's appearance of the Press. It is only natural I should feel proud of the paper as it comes out this week. Perhaps it is not admissable for me to say *all* I feel upon the subject, but this much I may state, that so far as I have heard the public express an opinion on its merits, it is one of entire satisfaction in every respect. For style and matter, type and arrangement, it certainly has now no superior in the State. I feel it an honor to hold a position on a journal so creditable to itself and so important to the community.

Since I wrote from the neighborhood of the Crimea House, I have been kept traveling around by different parties almost every day; and consequently have collected much important information of the mineral wealth of Tuolumne county. Of the vast amount of wealth in gold and silver, as well as copper, the public generally, below, know but little, and seem to care less. The unfortunate and unprofitable mania to seek a fortune any where but near home, so conspicuous in our people, is principally the cause, I presume, of this county being so much neglected. If I can be instrumental, therefore, in diffusing a more correct knowledge of this important section, and of drawing the attention of capitalists to it, I shall indeed be happy, for the correspondent of the London Times himself, could not have had a more splendid reception than I have had as your's; and, considering the stagnation of business—owing to the want of water—they have patronized the Press well.

Many long years, indeed more than a decade, have passed away since I resided in this neighborhood, and so far as copper is concerned, I find my early predictions verified. Like all other parts of California, it exhibits great changes in its general features, but most of them are certainly for the better. The reckless, dissipated population, the gambler and his *compancra*, the murderer, and promiscuous vice, which then prevailed, have passed away forever, giving place to order, virture, education, refinement, law. Many of the towns also, that I expected to see blotted out, such as those heading this letter, have grown into established importance; while the entire section, from one end to the other, is adorned with handsome homesteads, splendid gardens, and magnificent orchards. And yet, anywhere but here, with climate and mines unequaled, will our men of wealth and men of sinew go. The Atlantic States, during last year, consumed, I believe, the enormous amount of 40,000,000 pounds of copper, themselves producing only a little more than *one-fouth* of that amount. Let capitalists come up into this section, between the Tuolumne and Mokelumne rivers alone, judiciously invest $100,000, and in a few years time, the foreign supply will be no longer required. Need I say another word in favor of such a speculation; the happiness and prosperity it would give to the country districts; the dignity and importance it would confer upon the State; the business and affluence it would bring down to San Francisco? Sometimes, Sir; as I travel along, wondering at the beneficence of Providence to this State, and the marvellous developments a pitiable $100.000 would secure—pitiable at least, in connection with the results of its expenditure—the folly which takes our people of means to those far-off places, inhospitable in climate, unproductive in soil, *uncertain* in mineral wealth, would lead them right away to another place, where, according to tradition, it is insufferably hot, and the accommodations exceedingly poor. A word to the wise, they say, is sufficient. I hope it may prove so in this case.

On reaching Chinese Camp, which has become much larger than I thought it ever would be, I presented my letters to Judge Taylor, and Mr. Halsey, both largely interested in copper, and met with a cordial reception from them. On the following morning Mr. H. gave me a seat in his buggy, and drove me round till dark. About one mile below Montezuma, and four from Chinese Camp, is the

HALSEY.

It contains 3,300 feet in single foot shares. Main shaft sixty-five feet deep. This claim, I believe, is the pioneer of the district, and is certainly the most advanced of any. At one time it enjoyed a very high reputation. From a close proximity to a strong bed of serpentiue, it is difficult to form a final judgment as facts show themselves at present. I have already stated, no concentrated vein of copper will be ever found in this detestable rock, the associate but at the same time the evil genius of copper. In this case, the lead opens well two feet wide, with really rich black oxide ore. In the lower drift, where the inclination reaches the serpentine, it does not look as well as it ought to, having become diffused in sulphurets, all over the rock, as in the old shaft of the Harlem. I thought at first, and think still, depth alone is serviceable in the present shaft, as the only means of escaping the serpentine finally; and I am glad to hear, since, at ten feet deeper good oxide ore re-appears. They have concluded to go on sinking, and wisely, for depth with them is success. The works are complete, with a good steam engine and pumps, all put up under the superintendency of Mr. Halsey, who owns largely in the mine, and from whom it was named. Altogether, the management reflects much credit on Mr. Halsey. A few minutes walk below, on the same vein is the

LONE STAR.

It contains 2,300 feet, I believe, in single foot shares. Main shaft twenty feet deep, opening well with fine blue slate; but being also on serpentine no reliable judgement can be arrived at yet. Work suspended. A little lower also on the same vein is the

JAMESTOWN.

It contains 5,100 feet, in single foot shares. Main shaft 66 feet deep. At this depth, I understand, the serpentine is giving out, and the slate is rapidly becoming natural. Work being suspended at the time of our visit, I did not go down. All these claims open on good croppings, and rich carbonates, and if finally they dip clear of the serpentine, they will be valuable. A short distance west of the Halsey, on the supposed exteusion of the Copperhead of which I shall speak hereafter, is the

OLIVER.

It contains 6,250 feet in sixty-one shares. Main shaft twenty feet deep. This claim has just been opened by our good friend Mr Oliver, who goes heavy on "The Press." The foot wall appears very handsomely, and the vein shows good sulphurets in a pure rock. The shaft, however, would have been better 10 feet further east. Had Mr. O. sunk three feet further west, he would have gone outside the foot wall, and missed the vein altogether. So much for this notion of hugging the west side of the croppings. It always gives trouble eventually. Continuing down the main road to Jamestown, three-fourths of a mile, on another vein, is the

GERMANIA.

By some mischance I have lost my memorandum of this claim, but the main shaft is about forty feet deep. This claim like its neighbours, opens on iron-cap croppings, which I do not like as well as a talc formation, because as a general rule, they are followed by a very hard rock. The claim, however, is very promising; the vein is wide, reliably developed, has a pure rock, and shows good sulphurets, with an excellent cast of mundic, and sulphate of iron. Still they will have to go deeper than they have hitherto imagined. I do not think they will cut through the present rock short of 60 or 70 feet. Eventually, however, there is little doubt of this being a first-class

claim. Mr. Adam Haag and Mr. Riel, members of this company, both subscribed to the Press. To Mr. Haag I tender my acknowledgments for much assistance, and many civilities. Adjoining the Germania, but on another vein, is the

BURNA BURDA.

I have also lost my memorandum of this claim. The main shaft is, however, somewhat deeper than that of its neighbor. Much already said of the Germania is applicable here. I can only speak of the character of the rock, as I did not go down the shaft. Work has since been resumed. The rock is good, carrying heavy sulphurets of copper and a large quantity of mundic and sulphates of iron. Nevertheless they have to sink considerably yet. Below this claim, a few yards, on a third parallel vein, is the

BALLARAT.

Of this claim I was unable to learn any particulars—work having been suspended until next Spring. Neither, to my knowledge, did I make the acquaintance of any of the proprietors. All I can say is, the rock looks well. Proceeding hence to Jamestown, a little more than half a mile north of the town, I came to the

NORTH STAR.

It contains 3,600 feet, in single foot shares. Main shaft 50 feet, with two drifts, one 30 and the other 55 feet. Both of these, in my opinion, are entirely useless. They are also unfortunate, for the labor expended on them, put upon the shaft, according to present appearances, would certainly have given this claim the honor of first striking copper. It opens well upon rich carbonates; on these giving out the rock looked blank and dead, as it always does. Hence the first drift. But, to an "expert," it shows no more of the existence of the vein than the evidences in the shaft at the same depth, had they known where to look for them. They then went down to their present level, carrying the foot-wall nearly all the way, splendidly developed, with the hanging wall just coming in at the bottom; and now comes the incomprehensible error of drifting north between the two walls to strike the vein they are really all the time on. All they will ever find in that drift is what they have found—places here and there, where to the inexperienced eye the indications look better than at the foot of the shaft—that's all, and a poor reward it is for so great an expense and delay. This is really a sad blunder, though the present Superintendent is not to blame for it. Here is a splendid vein, 6 or 7 feet wide, with both walls developed with fluckan, carrying the handsomest slate possible, profusedly impregnated with copper pyrites, yellow sulphurets, sulphates of iron and mundic. Surely all that constitutes a copper vein, if anything does; and, therefore, by going down at the bottom of the shaft, they were equally certain to strike ore, by drifting on the vein north or south 60 feet and then sinking at the other extreme. This is a self-evident proposition, which admits of no argument. Beyond doubt the North Star is a magnificent claim, as it stands now. All it required was depth; and the length of the lower drift added to the shaft, would have given Tuolumne county a live and reliable copper mine, and I believe a rich one. I explained these views to Judge Preston and Mr. Calloway, the Superintendent, in a conversation with them upon the subject, and the probability is, they will sink a new shaft at the end of the drift, or go down on the old one. I have to acknowledge the cordial politeness of the Judge and Mr. Calloway.

These are all the mines in the neighborhood of the towns mentioned, lying on the south side of the celebrated Table Mountain, of which I shall speak hereafter in the proper place. I must now proceed to the north side of the mountain, some three miles, to the continuations of these claims. The first is the

PACIFIC.

It contains 2,250 feet, in 15 shares. Main shaft 20 feet, opening with a strong vein, carrying yellow sulphurets, copper pyrites and mundic. When I first saw this claim with Mr. Hulsey, its strong admixture with serpentine gave me an unfavorable opinion of its future success, in spite of its fine opening. By singular good fortune, they have lost, at their present depth, all serpentine connections, and run into a remarkably handsome talcose formation, with streaks of good shipping ore—fine, pure, yellow sulphurets. At one time I thought they were on the verge of opening the vein, but from rock I have since seen I conclude, from these sudden changes, it will take considerable depth to free it from all corruption, and open it reliably. The claim is managed by Mr. Halloc, who subscribed to the Press. Near this claim, somewhat lying north, is the

NE PLUS ULTRA.

It contains 1,800 feet, in 12 shares. Main shaft 20 feet, showing both walls well developed. I saw an excellent character of rock from this claim, very pure in formation, with strong yellow sulphurets and heavy cast of mundic. I did not visit the shaft. At present they cannot work on account of water. A mile and a half or two miles below the Pacific is the

COPPERHEAD.

It contains 3,300 feet, in 11 shares—at least it appears so in my notes, but I think they must be wrong. Main shaft 50 feet. This claim made quite a noise at one time, because, like many others, the splendid surface indications were over estimated in character and duration, and now they have given out, as they generally will. It is not valued as much as it ought to be. Apart from its splendid openings, both walls were reliably developed with fluckan, at first 20 feet apart. From the badly chosen site of the shaft, as usual too much west, and in a low rugged ravine, the walls have been sadly bolted, and now pinch together close. The vein, however, is strong and healthy, of splendid rich, dark blue slate, showing yellow sulphurets, black oxides, and sulphates of iron, and mundic—so strong, indeed, that it is impossible for it to give out. At 10 or 15 feet more, I am satisfied, it will widen again from 5 to 7 feet; the walls will become regular, and no further trouble experienced. At the same time I do not think anything less than 100 feet will open the mine properly. There is more in a name than some people imagine. Had this been called "Republican" instead of "Copperhead," it would, no doubt, have gone straight down, like any other decent, well-behaved copper mine, and not have cut up the didos it did. However, I am glad to say, I have *really* great faith in this claim. It is owned by a splendid set of fellows, to whom the Press is under many obligations. They not only took two copies, but rendered me much valuable assistance. To District Attorney Brown, Messrs. Gardner and Potter, County Clerks, our thanks are especially due. The only fault I find with them is, that about Christmas and New Years they were just a *leetle* too heavy on turkey and chicken-pie. Adjoining this claim, on the same vein, is the

OSO.

It contains 1,500 feet, in 10 shares. Main shaft 40 feet. In this shaft, from its more advantageous location, the vein shows itself straighter, more handsomely, though not more healthily than in the copperhead. It is some 5 feet wide, with both walls developed, and fluckan. The description of one answers the other, only, I think, from the advantage of position, and the settled and regular course the lead shows in this claim, it will probably be the first to strike copper. Still further north, nearly a mile, on the same vein, is the

MEADE.

It contains 3,750 feet in single foot shares. This was only just opening when I visited it. Since then I have understood it looks promising and healthy. Beyond the Meade, continuations on the same vein to the river Stanislaus, are the Break-of-Day Cañon, Mount Washington and Bouquet, at present simply locations. Considerably north of all these, on another vein, is the

DOWNEY, OR FRENCH CLAIM.

It contains 1,950 feet in 13 shares. Main shaft 20 feet, showing very pure and rich rock. There is something very singular in this claim. The vein was first found in a ravine by men working their placer claim, and so they foolishly sank right there, about 50 feet below the ledge where it crops on the mountain. In the shaft the vein runs east and west almost, as if sometime or other a portion of it had been dislodged from above and thrown down the ravine. There is no evidence whatever of its being a cross-vein, so that I think as they go down, rich as it looks at present, they will have trouble. One thing is certain, it has no right running as it does; and, if it does not come round to its proper course as they descend, there is surely something wrong somewhere.

Such, I believe, are all the copper mines in Tuolumne county at present in operation. Few people below, I take it, imagined there were so many, or that they looked so prosperous. Was I wrong in saying $100,000, judiciously invested, would accomplish wonders? Some of these claims are going to equal the best copper mines we have in the country. If, by bringing their merits before the public, reliably, as I have endeavored to do, you succeed in arresting the flow of money and men to distant, outlandish places, your paper will confer a greater benefit on the State at large than all the others put together, and eventually reap a proportionate reward.

I have another letter to prepare, on the quartz interests of this section; and, I think, I can show that in this respect, as well as copper, Tuolumne county is not behind any other in her claims upon the notice of capitalists.

L. H.

Reese River Letter.

We are permitted to make the following extracts from a recent letter written by J. E. Bowe, at Amador, Lander, Co., N. T., to Mr. B. J. Hull of this city, relating to the Aspinwall and Biglow ledges.

The ledges are located on "Forty-nine Hill," about one and one-half miles north of this place. The "Aspinwall," upon which the most work has been done, is without doubt one of the best ledges in the district. We have had two lots of rock tried at the same mill, Varney's. The first lot proved so rich that the mill man thought there was certainly a mistake, and of the next lot, all that we could get him to say was that it would work over twenty-five dollars to the ton. A Mr. Wilson, who claims to represent your company here, has tried it and he says that it assays from thirteen to fourteen hundred dollars per ton. Certain it is that we can take the rock and by burning it in a common stove, coat the rock all over with globules of silver and gold. We have got the richest specimens from this ledge that I have seen in the district, not excepting the far famed Amador. The ledge is from ten to twelve feet wide, and can be easily traced for nearly or quite its whole distance. I think more of it than any other interest I have in the Territory, and that is saying a good deal, as I have an interest in the first and also the second northern extension of the Amador.

SQUEAKING BOOTS—A REMEDY.—Who has not been annoyed, time and again, by squeaking boots? A correspondent of the *Scientific American* has been experimenting for a remedy. After trying several, he thinks he has hit upon one which will never fail. He saturated the soles with boiled linseed oil, keeping the soles as hot, during the application, as can be done without injury to the leather. As much oil is applied as the leather will take up. He had previously tried several other oils in the same manner, but without success. Boiled linseed oil is the only remedy he has tried without failure. Lecturers and public speakers, generally, as well as their hearers, will unite in a vote of thanks to that correspondent.

A FIRE was discovered in the Mint, on Monday, but speedily extinguished.

Summary of Mining News.

Trinity.—The cold in this county has been very severe. Correspondence of January 12th says:—

"At present the mines, mills, and everything else is frozen up as tight as the Arctic regions, and no one is doing anything, for the good reason that they would freeze their fingers if even they tried to roll only a few boulders out of the ditches, so as to allow their self-working reservoirs to do the work for them in this cold, bleak weather. Our mines, or some of them, at present are paying good wages—as good perhaps as any in the State; but they are not generally good. Of those that pay from $50, to $100 a week to the hand, I can mention Hulme & Co., Donebrink & Co., Day & Co., and Bartholomew & Twambly. They are all sluicing claims, and are good ones. Of tunneling claims, S. Brumfreid and Stevens & Pilcher are the only ones now being worked, and they pay exceedingly well. The owners think that after driving their gangways into what appears to be a black channel, they will strike it fabulously rich. Saw mills are all blocked up. There is nothing doing in the way of lumber at present."

Shasta.—The *Courier* of January 11th gives the following:—

"The original company in the Excelsior copper lode, located near Whiskytown, after sinking a shaft some eighty feet on the lode, and drifting from the bottom of the shaft several feet, have made such discoveries as to justify them in running a tunnel. They have commenced the tunnel so as to strike the lode some two hundred feet below the shaft. One day this week the quartz mill of James Long, near Middletown, cleaned up after crushing fifty tons of gold-bearing quartz taken from Jolly & Co.'s claim at Muletown, and had seventeen pounds of amalgam weighed on common platform scales. Those skilled in estimating the value of amalgam of this description say that the yield will be about $40 per ton of rock crushed."

Sierra.—The French Company on the middle Yuba, near Minoesota, have struck a pocket from which they estimate a yield of about $75,000 bullion in gold.

Nevada.—We have been able to gather nothing of interest from this county, during the past week, save the following from the Grass Valley *National*:

"The Massachusetts Hill Mining Company, of this place, for eleven day's run, recently cleaned up $26,000. Plenty of the same kind of quartz now ready for crushing. Such a yield as this, supposing the base of operations to be across the mountains, would set the people wild, and draw four or five thousand persons away from comfortable homes. Not easily excited here."

El Dorado.—The French Company, at Rhodes' Diggings, in this county, engaged in quartz mining, are taking out exceedingly rich rock. They intend to erect a mill in a short time. For a number of months past, they have shipped their rock to San Francisco, and had it crushed, and realized from it large returns.

Monterey.—The *Gazette* says that confidence is increasing in the Soberana mines. A rough assay recently made of some rock brought to the city was highly satisfactory. Work is steadily progressing, developing at every stage the great extent of the ledge and its exceeding richness. The stock is mostly in the hands of men of contracted means, who are unable to sustain the expense involved in erecting machinery, and are therefore confined to the primitive appliances used by the Mexican miners. "Slow but sure" is their motto. Zaragossa is improving. Much labor has been expended in tunneling, amply warranted by the indications. Valuable assays were obtained from this mine months since, but no well defined lead had been struck. Recent prospecting has been more successful. From the copper mines we continue to receive reliable accounts of their wealth and great extent.

San Louis Obispo.—The Monterey *Gazette* says that wonderful stories of newly discovered quicksilver and copper mines in the neighborhood of San Louis Obispo, are constantly coming in, accompanied by specimens of extraordinary richness. A large extent of country has been taken up, but so far as any reliable information has been received, only one distinct lead has as yet been found. This, however, judging from the immense mass of rich float rock which has been discovered, it is thought will lead to other discoveries of a valuable character. The excitement at San Louis Obispo is said to be most intense, amounting to a perfect mania, so much so that her citizens are now digging up their main street in search of hidden treasure.

It is now about two months since these discoveries were first announced. The principal vein, as above noticed, is of cinnabar and is located near San Miguel Mission, in the northern portion of the county as laid down upon the map of California. A company has been formed and incorporated to work it, and shares are held at rates ranging at from $20 to $120 per foot. The vein is said to be very large, fully 20 feet thick, and believed to be as rich as the new Amador. Every shareholder considers himself a *millionaire*, and perhaps he may be if quicksilver don't come down to a bit a pound in price. There is an old tradition that a rich mine of "vermillion paint," was formerly well known to the Indians of that neighborhood, which may be the identical one which is now creating so great an excitement.

Santa Barbara.—Increasing attention is being paid to the mineral deposits of this county. The entire coast range of mountains extending through Monterey, San Louis Obispo and Santa Barbara counties are known to be full of mineral, and it is confidently expected that it will soon prove of great value for its deposits of cinnabar and copper and possibly of gold and silver. Parties have been out the past season all through this region searching for copper and silver. It is said on pretty good authority that during the Mexican war, a soldier belonging to Col. Lippet's command, stationed at Santa Barbara discovered a rich vein of cinnabar in the mountains back of San Benaventora Mission. A piece of the ore was pulverised and retorted in a gun-barrel, from which its character was positively determined, and the ore known to be rich. This vein has often been searched for of late, but without success, unless possibly, at a very recent date. During the last five weeks it has been suspected that it has been re-discovered by a party of miners, who have been very mysteriously busy in that vicinity. They claim to be connected with "rich English capitalists," etc.

It may safely be predicted that this region will at an early day occupy an important position among the mining localities of the Pacific coast.

A Large Theft of Amalgam is noticed in the Virginia *Union*, as having taken place on the night of January 10th, at the Washoe Reduction Works, near Washoe City. It was taken from the private room where it was usually kept, previous to being retorted. The room was broken open by the robbers and about $5,000 worth of amalgam taken, and as much more in value of bullion. Several of the Freyburg casks, or barrels were also broken into.

From Key's District.—Mr. J. H. Gibbs, of Owensvile, has just brought us some fine appearing rock from Owens River, which can be seen at this office. The samples include specimens from the Sheba, Blue Lead, Manhattan and Twin Brothers. Mr. Gibbs has a favorable report from the mines in that section, and promises our readers the benefit of his information in our next issue.

Mounted Prospectors for Arizona.—The *Union* of the 14th says that a company of mounted prospectors is being organized in Virginia City to proceed to Arizona. They will go armed as a protection against the Apaches. The company is to consist of 100 persons, and will start early in the spring.

Another Mining Company.—A mining company, called the Rincon Forest Gold and Silver Mining Company, has recently been incorporated. The company propose to lay out a town in the Rincon Valley on the Scyante, and to give to every purchaser of the Rincon mining stock a town lot and five acres of land.—*Santa Cruz Sentinel.*

The State Constitution voted upon by the citizens of Nevada Territory, on Tuesday last, was rejected by an overwhelming majority. The objectionable feature of the Constitution was the clause taxing the unproductive mines. So Nevada will remain, as heretofore, a magnificent "Territory."

Crosette has sold out the Butte *Record* to Wagstaff, of the Oroville *Union*. The latter excellent paper (like the story in the *Sunday Mercury*) will be continued.

Washoe Mining Stocks.

The Mining Share Market of Virginia City is improving, although transactions still continue limited. Most of the sales are confined to leading stocks.

Virginia District.—The transactions in this district are somewhat limited. Burning Moscow may be quoted at from $140 to 175. Buroside advanced slightly during the week, $16 being bid for it. South Burnside has also advanced. Bajazette and Golden Era has gone up materially, $35 having been offered for small lots, though we have heard of but few sales. For Milton $40 was bid, and $50 asked. Sacramento, since the consolidation with the Meredith, is held at from $100 to 110, but few transactions have taken place. For Utah $74 was repeatedly offered in the Stock Board, with no sellers. Bids for Sutro have advanced to $5 50, $7 being asked. Allen $60 is asked; Honduras $15 asked; Hurst & Meredith, 55 asked; Iowa, 100 asked; Iusuraoce, 12 asked; La Crosse, 27 bid—30 asked; Ponce de Leon, 1 bid; Seneca, 8 bid—9 asked; Latrobe, 75 asked; Carson and Truckee Wood Co., 75 asked; Kenosha 2 bid, 5 asked.

Gold Hill District.—We quote sales: 25 shares Globe at $13; 145 shares Golden City $4 to 6; 20 shares Leon at $10; 40 shares Dilligent at $3 50 to $4; 55 Colden Horn at $7; 85 shares Arizona $10 50 to $13; 60 shares Jenny Liud at $6 to 6 75; 20 shares Tontine at $5 50; 150 shares Argo at $4 to $8; and 16 shares Mary Ann at $40; Justice has declined somewhat, having closed at $110 asked and $80 bid. Rock Island has advanced slightly, holders asking $12. North American remains about the same, and may be quoted at $85. Caledonia Tunnel at from $30 to $35. Globe is in demand at from $10 to $13. Crown Point Ravine advanced in the early part of the week, but afterward declined slightly, $20 being offered it at the close. Ooeota was sought after at $15, but there were no sellers. For Navigation $6 was bid and $12 asked. Argo in good demand at $8. Overman is steady, having sold at 550 during the week. There is a fair demand for Dilligent at 4. For Keystone $20 was bid, holders asking $35. For Miantanomah $8 was offered.

Flowery District.—Since the excitement in the Lady Bryan, a number of other claims in the vicinity have been in request, such as the Desert, Uncle Sam, &c. For Lady Bryan $50 is bid and $60 asked. Three dollars is offered for Uncle Sam, and for Desert $17 is bid, holders asking $25. Harrisoo, $5 asked; International, $2 bid; Atwill, $4 asked;

Argentine District.—North Opbir, $6 bid—$15 asked.

Devil's Gate District.—Pride of the West, $80 bid; Sebastopol, $4 bid.

A Durable Ink.—The Romans wrote with an ink made from finely pulverized charcoal. The durability of this ink has been most strikingly manifested by the legible character of the writings found in Herculaneum, which have retained their original blackness for more than 2000 years. The enduring character of this ink is owing to the carbon which was present in the charcoal—carbon being one of the most durable substances known. The incorruptability of charcoal was well known to the ancients, and its durability is not overlooked at the present day. Charred stakes, with no apparent decomposition upon their surfaces, have been taken out of the Thames within the present century, which were placed there by the ancient Britons to prevent the ascent of that river by Julius Ceasar and his army.

The Patent Office.—During the past year the business of the Patent Office has come fully up to the standard which existed previous to the outbreak of the rebellion. A large number of the inventions now being made are the results of recent discoveries in the arts. The introduction of kerosene oil alone has been the means of bringing out no less than 400 inventions solely for lamps to burn that oil.

The Metal Market.

Unusual activity in the metal market, foreign and domestic, still continues. In addition to our war troubles, the increasing probabilities of a general European disturbance is exerting an important influence upon the market everywhere. Prices are firm, with an upward tendency.

Iron.—The iron trade fully maintains the improvement manifested during the past few months. In the British market, at latest dates, orders were on hand in many localities for two and three months ahead. The demand for railways and shipbuilding is greatly on the increase. Swedish has slightly declined, while English iron and Scotch pig is in great demand. Quotations in London, are at £8 10 s; rails £7@£7 10s at the works.

In New York we quote a sale of 50 tons Refined English Bar, at $100, cash. We quote Scotch pig at $43@$45 per ton, cash, but job lots command higher rates; American, No. 1, Pig at $42@$45, Nos. 2 and 3 do. are more plenty and comparatively much lower; Swedish Bar, at $135; English Refined do. at $95@$100; do. Sheet at 6½@8c. per lb., and Russia do. at 22½c.

Copper.—The London market is steady, holders firm. But few sales except in second hands. Some little business doing in foreign at nominal prices. Burra Burra is quoted at from £99@£10; Rapuuda, at £102. The copper ore market has been somewhat finetuating. On the first of November it had advanced about £1 10s; on the 5th it still further improved to the extent of £2 10s; declined slightly on the 12th, and still further on the 19th. At the four Cornish sales of ore during the month of November 14,768 tons were disposed of, with an average assay of 6½ per cent.

In New York, at latest dates, refined ingot was less animated, with prices firm at 27½@38c.

Tin.—Unsettled, with a downward tendency in the British market. We give New York quotations —Bonca 54; Straits 42c.

Lead.—Has slightly improved. We quote American—per 100 lbs, $9¾@$10; German $9¾; bar per lb 11½c; pipe and sheet 12@12½c.

Another Printer Gone.—Geo. H. Winslow, the founder of the Press, died in this city on Monday last, and his funeral was attended at Dashaway Hall on Wednesday. We were not personally acquainted with Mr. Winslow, but learn that he was a person gentlemanly in manners, of generous impulse and adventurous spirit. Some weeks ago the deceased rescued a child from drowning by leaping into the bay. From a scratch received upon his person and the cold taken by this operation, his death by erysipelas occurred. Like most printers, his connection with the press was varied, and now, as the ills of life are o'er, we trust, whatever may have been the errors upon his "proof sheets" here, he has taken a clear "revise" to the "Master" above. Mr. W. started this journal under the name of "*The Scientific Press*," but his connection with the same ceased after the issue of a few numbers.

San Francisco Board of Brokers.—This Board voted, yesterday, to hold two sessions a day hereafter. We understand that the prospects of this Board are highly flattering. Its membership is full and its sessions well attended. The business before the Board is rapidly increasing. The reports which we give this week, it will be observed, by comparison with reports of previous weeks, exhibit a large increase of sales. We are pleased to notice these gratifying evidences of progress. They also indicate an increased interest on the part of the public in transactions in mining stocks.

By advertisement in another column, it will be perceived that notice is given that an Open Board will be held daily, hereafter, at their Rooms, at 10½ o'clock, A.M., Sundays excepted.

New Incorporations.

The following is a list of the companies having their principal place of business in San Francisco, which have filed articles of incorporations in the County Clerk's office since our last report.

Agua Nueva C. and S. M. Co.—Arizona Territory. Trustees: Celestin Ringel, Herman Hotzhauer, Wm. Crocker. Capital stock, $120,000.

Castle Dome M. Co.—Arizona Territory. Trustees: J. G. W. Schultze, John Grief, Adam Mendez, Jacob Tchleicher, Gustave Mayrich. Capital stock, $180,000.

Los Angeles M. Co.—Arizona Territory. Trustees; J. G. W. Schultze, F. Strand, M. Scholl, Adolphus Nohl, C C. Feitz. Capital stock, $82,500.

Rio Cuneo S. M. Co.—Sonora, Mexico. Trustees: John E. Kincaid, Benjamin Dore, Geo. W. Paget. Capital stock, $600,000.

Magoie G. and S. M. Co.—Lander county, N. T. Trustees: A. H. Hagadorn, R. Cullen, James Leffingwell, Samuel Donnelly, A. G. Hasey.

Mount Moriah S. M. Co.—Reese River. Trustees: W. R. Garrison, Wm. Wadham, H. C. Nichols, C. J. West, J. M. Merrill. Capital stock, $180,000.

Highland G. and S. M. Co.—Reese River. Trustees: G. W. Benham, J. G. Jaekson, A. J. Shrader. Capital stock, $50,000.

South Milas G. and S. M. Co.—Storey county, N. T, Trustees: James Leconey, E. E. Eyre, R. C. Page, John S. Dudley, C. S. Fairfax. Capital stock, $250,000.

Consolidated Ophir Copper M. Co.—Colusa county, Cal. Trustees: A. K. Ginson, Perley Dunlap, W. H. Blood, Matthew Crook, L. N. Thorne. Capital stock, $300.000.

Fool Catcher No. 1, G. & S. M. Co.—Colusa county, Cal. Trustees: Matthew Crooks, W. H. Blood, I. N. Thorue. Capital stock, $410,000.

Fool Catcher No. 2, G. & S. M. Co.—Same location, Trustees, and capital stock.

Fool Catcher No. 3, G. & S. M. Co.—Same location, Trustees, and capital stock.

Ashlann Mining Co.—Arizona Territory. Trustees: James Hitchens, E. D. Knight, H. D. Begnette, James H. Davis, R. E. Bucaner. Capital stock, $140,000.

Pittsburgh G. & S. M. Co.—Amador county, Cal. Trustees: Thomas Ryan, Wm. H. Ryan, John Nash. Capital stock, $100,000.

Ne Plus Ultra G. & S. M. Co.—Amador county, Cal. Same Trustees and capital stock.

Baden Baden G. & S. M. Co.—Shasta county, Cal. Trustees: Louis Wegterman, Lloyd Martin, R. W. Bryant. Capital stock, $120,000.

Zaidee G. & S. M. Co.—Russ River. Trustees: A. P. Cox, A. P. Sandford, George H. Merrill, D. McDaniel, J. H. H. Williams. Capital stock, $50,000.

Uncle Ade G. & S. M. Co.—Tulare county, Cal. Trustees: H. P. Garland, B. P. Wilkins, John A. Bray. Capital stock, $135,000.

Hibernia Copper, G. & S. M. Co.—Williams' Fork Mining District. Trustees: T. G. Williams, James F. Crowley, D. McCarthy, John Donnelly, M. M. Colgan. Capital stock, $360,000.

Omega Virginia Co.—Storey county, N. T. Trustees: W. H. Bremer, H. G. Maynard, P. Meagher, T. C. Sanborn, J. H. Jones. Capital stock, $360,000.

North Moonlight G. S. M. Co.—Humboldt county, N. T. Trustees: B. C. Wattles, A. Fonda, J. R. Coleriek, Henry Dreschfeldt, E. Flanagan. Capital stock, $240,000.

Buena Fe Mining Co.—Copala District, Sinaloa, Mexico. Trustees: E. A. Saxe, E. H. Washburu, E. D. Wheeler, John F. Schulthees, John Stoek, Edward Woodruff and E. T. Peck. Capital stock, $270,000.

South Chrysopolis G. & S. M. Co.—Inyo District, Tulare county. Trustees: Hiram Ayres, Albert Thurber, Wm. Ayres, Holland Garland and Henry Ayres. Capital stock, $180,000.

Santa Catalina M. Co.—Santa Catalina Island, Los Angeles county. Trustees: A. J. Downer, Isaac Swaiu and John F. Pope. Capital stock, $400,000.

Idaho Consolidated G. & S. M. Co.—Inyo District, Tulare county. Trustees: C. Smith, J. C. Hall, W. S. Bell. M. Hopkins and M. G. Elmore. Capital stock, $112,500.

Golden City G. & S. M. Co.—Location and Trustees, same as above. Capital stock, $190,000.

Victory G. and S. M. Co.—Location and Trustees, same as above. Capital stock, $105,000.

Arroyo Seco Copper M. Co.—Amador county. Trustees: J. Mora Moss, Herman Wohler, John McNeely, H. A. Carter, John Nightingale. Capital stock, $650,000.

Rimrose G. and S. M. Co.—Lyon county, Nevada Territory. Trustees: John Sronfe, John J. Ellis, John McBrown. Capital stock, $120,000.

Bella Union G. and S. M. Co.—Arizona Territory. Trustees: John King, R. F. Hayes, Samuel L. Theller, A. C. Whitcomb, J. R. Beard. Capital stock, $1,600,000.

Two Thousand Lives were destroyed by the recent conflagration of the Catholic Cathedral, at Santiago, Chili. The doors opening inward became closed, and the alarmed crowd rushing towards the entrance formed such a press that they could not be opened.

Mr. David Henriques, has our acknowledgements for a copy of the Stock Report Circular received from him.

Nevada Legislature.—The Territorial Legislature is now in session in Carson City, and appears to be a very quiet body.

The Trinity Journal, an exemplary mountain newspaper, has commenced its ninth volume.

Neighborly Opinions.

The following generous expressions of our neighbors are highly appreciated by us, and we return to one and all our best compliments and good wishes. We believe there is no more generous class of men living than the majority of the editors of the interior journals of this State.

We have received No 1 of the enlarged Mining and Scientific Press, published by Dewey & Co., San Francisco. It is greatly improved, and gives promise of an excellent, able and reliable journal.—*Marysville Daily Appeal.*

Mr. A. T. Dewey, a journalist of experience, has become associated with Messrs. Ewer and Smith in the proprietorship and conduct of this paper. It inaugurated the new year by doubling its size and other improvements, and is now a first class journal for miners and mechanics, as well as for the general reader.—*Sacramento Daily Bee*

This journal comes to us this week with a new head and enlarged to the full size of the *Scientific American* published in New York—sixteen pages. Those who take an interest in mining, industry and art should not fail to read the prospectus of the Press, which may be found in our advertising columns, and those who may desire to see copies, intending to subscribe, will have specimens sent free on application by letter to the office of publication.—*Mountain Messenger, La Porte.*

We have received the first number of the eighth volume of this interesting paper. It is now under the control of Friend Dewey, and has been enlarged to sixteen pages. We commend it to miners, stock dealers, and others taking an interest in the development of the mineral lands of this State. It can be had for $5 a year, and if preserved will make two volumes of interesting matter, containing 416 pages each.—*Red Bluff Independent*

We find its pages filled with mining news and articles of interest to miners and scientific men. Persons interested in mines in this State, Nevada Territory, Arizona or Mexico, should certainly subscribe for the Press.—*Napa Reporter.*

It has been enlarged from eight to sixteen pages, and promises to be a valuable publication.—*Sierra Democrat.*

Is is full of the most valuable reading matter. Those at all interested in mining affairs should subscribe for it at once.—*Alameda Gazette.*

It is devoted to news, art, science and progress, and should receive a liberal support.—*Solano Press.*

The Mining and Scientific Press comes to us enlarged to double its old dimensions, and otherwise improved. The Press is the only journal on this coast devoted exclusively to mining and scientific matters, and should be read by miners everywhere. It is published weekly, at $5 per year.—*Oroville Union.*

To all persons interested in mining and mechanics, it is valuable. *An Unknown Paper.*

We are pleased to welcome this excellent paper in its handsome new dress and enlarged proportions, the energetic proprietors having commenced its eighth volume with a double sheet.—*Ione Chronicle.*

This valuable mining journal comes to us this week in a new dress and wears a very happy face. The improvements in that paper cannot but bespeak for it a liberal patronage of all those interested in mining—and who is not in this age and country?—*The Gleaner.*

The Press is exclusively a mining journal, and is one of the ablest sheets of its kind published in the United States.—*Calaveras Chronicle.*

We desire to call the attention of our readers to the advertisement of the Mining and Scientific Press, published at San Francisco. It tells its own story, and leaves nothing for us to say, except that it is the best journal of the kind now published, and ought to be patronized liberally by the merchants, miners and scientific men generally on the Pacific coast. The editors are reliable gentlemen, and well qualified for the task they have undertaken.—*North San Juan Press*

We note with pleasure recent improvements in this publication. With the new year, it becomes a sheet of sixteen instead of eight pages, and has a more attractive typographical appearance. C. W. M. Smith. W. B. Ewer, and A. T. Dewey are the publishers under the title of Dewey & Co. We notice that several distinguished occasional contributors have been engaged to add to the interest and value of the paper. We wish the enterprising contributors continued success. Their influence in the relation to the mining interest of this Coast is excellent and important; and they deserve, as no doubt they will receive, a large patronage from a numerous public, interested in the development of mineral wealth.—*The Evangel, S. F.*

Discovery.—Mr. Harnett agent for the Mining and Scientific Press presented us with a specimen of copper ore, discovered by him on Wood's creek, about a mile below Sonora. It is in appearance a fine quality of sulphurets in a matrix of quartz—the quartz showing in a soft, talcose slate on each side. If prospectors would only be active, there is no doubt Sonora would again be an important mining camp, as nearly all the discoveries of copper and silver have been made in the neighborhood of known rich gold camps.—*American Flag, Sonora.*

Miscellaneous Information.

Gigantic Pair of Shears.—An immense pair of shears has just been completed by a firm in Birmingham, England, for the Russian Government. It is what is known in the trade as a "horizontal hydraulic shearing machine, with open mouth," and is said to be the largest and most powerful contrivance of the kind ever fabricated. It weighs 24 tons, has a pressure power of 1,000 tons, and can break a bar of iron half a foot square. The cylinder of the machine may be used as a hydraulic press of a thousand tons power; the machine is fitted with valve arrangements to reverse itself at any length of stroke; it may be set to cut iron from half an inch thick to six inches thick; when at full power it will cut a bar of iron six inches square in forty seconds; and the return motion is six times as fast as the cutting motion. To this it may be added that the castiug weighs 18 tons, and that the fittings weigh about six tons The blades are of hardened cast-steel. The force pumps for the machine are so arranged that they can be set to any power, and being set to that power cannot go beyond it, but as soon as they reach it retreat. The machine is intended to be used as a "scrapping machine," in a large ironworks in the neighborhood of St. Petersburg. The immovable parts of the machine are manufactured from cannon dropped into the sea during the great siege of Gibraltar by the Spaniards.

A Novel Project.—Various projects have been suggested with the view of effecting a more speedy conveyance of letters and parcels between England and France. A submarine tuunel, similar to that under the Thames, has been proposed, and seriously considered. A pneumatic telegraph has also been proposed. The latest, however, is the proposition to erect in both countries, at a distance of about one thousand metres from the coast of Calais and Dover, a strong edifice of masonry, containing a steam engine of sufficient power, by means of which an immense wheel, twenty-five metres in diameter, is made to turn forty times a minute. By this rotation a series of wires, forming a gigantic strap, extending across the channel, is coiled round the wheel at one end, say at Dover, and uncoiled at the other, Calais, and conversely. To this strap India-rubber bags are to be attached, so that, within the short space of only twelve minutes, the letters and dispatches of one country may be safely landed in the other.

Sewing Machines.—Notwithstanding the great degree of perfection to which the sewing machine has been carried, all efforts have failed, until quite recently, to produce one which would work *button holes*. Mechanical ingenuity has at last, however, triumphed—this new and novel feature has been fairly introduced. At the recent Fair of the American Institute in New York, a machine was on exhibition that worked one thousand button holes per day in a manner that for elegance and strength far exceeded the old method of working them.

New Guns.—Captain Ericsson has contracted to furnish some 13-inch smooth bore guns, which are to have a much greater velocity than any now in use. He is to receive nothing for these guns unless they burn over fifty pounds of powder—for every pound of powder beyond fifty, Mr. Ericsson is to receive $5,000. He is confident of being able to burn 100 pounds, and is quite certain of burning at least 75 or 80 pounds. The solid shot which this gun is intended to carry will weigh 220 pounds.

Officers of the Mercantile Library Association.—The following is a list of the officers elected by this institution on Monday last: President, G. W. Bell; Corresponding Secretary, L. S. Pease; Recording Secretary, Coll. Dean; Treasurer, J. M. Shotwell; Trustees—W. M. Noyes, G. T. Hawley, Robert Simpson, J. W. Cox, J. F. Pope, J. H. Wildes, Wm. Wadhams, Wm. H. Eldridge, John Y. Lind.

To Keep Chimnies Clean.—Instead of plastering the inside of chimnies the usual way, the Albany *Cultivator* says, take mortar made of one peck of salt to a bushel of lime, adding as much sand loam as will render fit to work, and then lay on a thick coat. If the chimney has no offsets for the soot to lodge on, it will continue perfectly clean.

Slate Quarries in Vermont and Canada.—Mr. R. Bell, of the Geological Survey, in a paper on this subject, read before the Canadian Natural History Society, says that the annual value of the slates produced in Wales alone is nearly £1,000,000 sterling, and the nett profits of many of the companies engaged in this branch of industry are upwards of 50 per cent. The most important slate-producing districts in North America is situated in Vermont. But little of the deposit in Eastern Vermont could be profitably worked, "owing to contortions, imperfect cleavage, cross-joints, and the presence of foreign ingredients." Bands suitable for the manufacture of roofing slate were only found occasionally in this district. The quarries in the western part of Vermont appear to be more productive than those in the eastern part of the State. It seems that this slate is used for other purposes than roofing. Mantel-pieces, table and bureau tops, billiard-table beds and lamp bottoms are manufactured from it The slates produced from the Northfield Quarries, Vermont, sell at $3½ a "square," delivered in the cars. In Canada the price is 50 cents less per square, delivered at Richmond. A square of slates is 100 square feet; and the greater the number of slates making up this area, the less the price. The most important slate quarries in Canada occur in the eastern townships. Geologically speaking, they belong to rocks of the Quebec group. The author described other probably favorable localities for roofing slates in Eastern and Western Canada.

Chilian Railroads and Mines.—A correspondent of the New York *Herald*, writing from Panama, November 23, says:

The famous contractor and capitalist, Mr. Brassy, who has constructed nearly all the railways in Spain and India, has sent an agent to Chile—a Mr Bayles—with instructions to tender for all the railroads the government of Chile may desire to contract for and guarantees an interest of six per cent. per annum on all the capital invested. The agent, Mr. Bayles, is now on a tour of inspection, examining the southern provinces as to localities. A privilege has been asked for to construct branch lines to the Central Railroad, which will connect the main line with several suburbs east of the capital.

From the mining districts we have but little information. An inundation of one of the shafts in the coal mines of Señors Rojas & Co., near Coronel, has taken place. It was stated that this accident had destroyed some sixteen miners; but later information says that eight have been since rescued, and it was hoped that all would be saved. The coal mines at Coronel have been doing remarkably well during the month of October, thirty-six hundred tons having been shipped during that period.

Frightened.—It is said that the only frightened subjects in Charleston, during the present bombardment of that city, are the pigeons, which abound there in great numbers. At every report they rise into the air from all parts of the city, and fly about in the greatest consternation. During the days when the fighting is kept up pretty briskly on both sides, they are scarcely able to take rest at all, or to procure food, and as a consequence great numbers are found dead in the street and about the yards and vacant lots of the city.

Opposition on the Colorado.—The movement for establishing an opposition steam line on the Colorado has assumed a definite form, and bids fair to become a success at no distant day. When the new boat now building for the Colorado Navigation Company in this city, and that of the Miners' Colorado Steamboat Company, commence running, the condition of affairs in the mining districts of Arizona and Southeastern California will rapidly change for the better.

Gold from the North.—The amount of gold exported from Victoria to Europe and the United States since 1858 is $10,200,134. But this was only through the ordinary banking channels, and the Victoria *Chronicle* thinks as much more was contributed through other parties. It would probably be safe to rate the amount through other channels at half the *Chronicle's* estimate, which would give the total product of the colony something over $15,000,000.

Hydraulic forging presses are coming into use in England, in place of hammers.

Force of Gun Powder.—Much uneasiness is felt in some of the Eastern cities with regard to the immense stores of gun powder which are collected in the immediate vicinity of those cities. Some of these magazines contain quantities as large as 500 tons! The terrible consequences which would result from an explosion of such a mass of powder are fearful to contemplate. If it should occur near a large city, it would level spire and dome, and bury thousands beneath its ruins. By the explosion of a far less quantity of powder than that named, an entire quarter of the city of Leyden was destroyed in 1807, and one hundred and fifty persons perished in the ruins. Extraordinary precautions are ordered to be taken by those who have any connection with the handling of powder and loaded shells in the various magazines; still it is feared that some accident may happen, and it is suggested that these depots should be removed to more sparsely populated neighborhoods.

Flax *vs.* Cotton.—It will be recollected that the Agricultural Department at Washington, some time ago, appointed a Commission to enquire into the practicability and economy of so preparing hemp and flax as to render it a fit substitute for cotton The Commission has given notice of an adjourned meeting to be held on the 24th of next month, at which all persons are invited to be present who are willing to aid in the object, or who have attempted any experiment in that direction, either in the way of preparing the fabric or constructing suitable machinery for such a purpose. It may not be uninteresting to state in this connection that a factory has recently been put up at Cleveland, Ohio, for preparing flax, to be used either in connection with cotton, or separately, in the place of cotton. This factory is turning out flax, so proposed, at the rate of 2,000 pounds per day The material is prepared for a company engaged at the East in the manufacture of satinets.

The public lamp-posts at Paris, which are of cast iron, are being coated with copper, by electro-depositing, so as to have all the effects of bronze. The large fountains in the Place de la Concorde have recently been taken to pieces in order to be thus covered. The work is done by M. Oudry, at Anteil, who is carrying on electro-depositing on a gigantic scale. He has recently completed a full-sized copy in copper deposit of Trajan's column at Rome.

Milking Machines.—No machine has yet been devised for milking which stands the test of use. Few, if any, of the many articles patented for this purpose are now offered for sale. The field of invention in this direction is still open.

McCue informs the *Transcript* that he will positively put on a daily line between Sacramento and Virginia city, running through Grass Valley and Nevada, commencing on the first of March.

It is proposed to organize on territory which now belongs to Amador, El Dorado and Mono, a new county to be called Alpine. The county seat will be Markleeville, and the western boundary of this new county will be the summit of the Sierra Nevada.

The Golden City brought 639 passengers and 1,700 tons of freight, on her last trip from Panama.

The catholics of San Leandro are building a chapel. The building is to be a gothic structure, with a spire 96 feet high.

Counterfeit silver coin, which has appeared in large quantities, is believed to be manufactured in San Francisco. It may be detected by observing the defective milling.

It is calculated that at the present time there are about 260,000 English vessels on the sea, and that they are manned by above 1,500,000 seamen.

The total valuation of taxable property for 1863 in California, was over $174,000,000; an increase of $14,000,000 over that of the previous year.

Henry C. Taylor, the oldest editor and newspaper man in California, died on Monday in this city.

The debt of Colusa county, according to the *Sun*, is $35,000.

The Austrian Government recently purchased machinery for making rifles, of a firm in Hartford, Conn.

Patent Department.

A New Hydraulic Hose Nozzle—*A California Invention.*—Seth Martin, of Little York, in this State, has just received letters patent for an improved "Hydraulic Hose Nozzle," designed to accomplish an important purpose, as hereinafter described. The ordinary hose pipe in use for hydraulic mining, as is well known, is very apt to spread or scatter the stream, partly in consequence of the abrupt taper form of the short pipe employed, and partly in consequence of the adjoining portions of the hose, which is almost invariably twisted or crooked near its junction with the pipe. The spreading or scattering of the stream detracts greatly from its efficiency. The object of this invention is to remedy this difficulty. This is said to be effectually accomplished by means of internal radial plates, which constitute the essential portion of the invention.

Quartz Crusher or Amalgamator.—*Another California Invention.*—P. M. Randall, of this city has taken out a patent for an Amalgamator for reducing quartz pulps and amalgamating the gold which may be contained therein. The invention is also applicable for the reduction of any other substance of a pulpy or pasty consisteney. In his specifications, the inventor claims a rotary muller, provided at its face side with grooves of involate or other form, which will force the substances to be acted upon from the periphery of the muller towards its centre, and thence upward through the muller, so that the substances may be expelled again, by centrifugal force, toward the periphery of the muller, and thence again underneath, to be again forced toward the centre as before.

An Improved Amalgamator—*A California Invention.*—Mr. Zenas Wheeler, of this city, already widely and favorably known to the mining public of the Pacific coast as a practical and successful inventor, has obtained letters patent for still further improvements in amalgamating pans, by which the important work of amalgamating may be conducted with greater economy and a still nearer approach to perfection. The practical knowledge of Mr. Wheeler in this department of mining is a sufficient guarantee that any invention emanating from his brain will not fail to show an improvement over processes previously employed. We shall probably be able to speak more fully of this invention at an early day.

India-Rubber Soles.—Mr. McBurney, of Roxbury, has patented a new article of manufacture—a sole for boots or shoes, made of vulcanized india rubber. The soles, as manufactured by him, are provided with holes already perforated for the reception of nails, pegs or threads, by which the sole may be readily attached to the uppers without any subsequent process of piercing or cutting holes. This sole is so constructed that it may be readily and securely attached to any upper, in such a manner as to form as neat a piece of work as though the sole was formed, as usual, of leather. The advantage of such an invention must be apparent both as a matter of economy and comfort. The chief advantage of a rubber shoe is thus obtained without the serious drawback of confined perspiration, so injurious to health, by the use of rubber uppers. The difficulty of accomplishing this end has hitherto been found in the inability of the manufacturer to make a neat and water-tight union between the rubber and leather. This result seems to have been obtained by Mr. McBurney. Any shoe-dealer in this city who may be able to supply himself with this article, before the rainy season is over, will not fail to do a thriving business.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 3th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enabled to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, prosecuting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $30. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction, and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our Agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in allo, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months	$10 00
On every application for a design, for seven years	15 00
On every application for a design, for fourteen years	30 00
On every caveat	10 00
On every application for a patent	15 00
On issuing each original patent	20 00
On filing a disclaimer	10 00
On every application for a re-issue	30 00
On every additional patent granted on a re-issue	30 00
On every application for an extension	50 00
On the grant of every extension	50 00
On appeal to the Commissioner from Examiners-in-chief	20 00
On every appeal to the Judges of Circuit Court, D. C.	25 00

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulched in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeal and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Patent Claims.—We will furnish, on application, the claim of any invention that has been patented within the last fourteen years. The name of the patentee, date of patent, when known, and two dollars for copying, should be sent.

Back Numbers.—We have a limited number of past volumes of the Press on hand, which will be sold, neatly bound, at reasonable rates. A portion of the back numbers of the paper can be had by the single copy.

Mining and Scientific Press.

OFFICE in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms in Advance.—Having adopted the cash system, ALL payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

San Francisco:

Saturday Morning, January 23, 1864.

A MINING SCHOOL FOR CALIFORNIA.

The Legislature now in session will soon be called upon to take some action to secure the the 500,000 acres of land donated by Congress for the establishment of an Agricultural School, within the limits of the State. The donation is a munificent one, and the State should lose no more time in securing it.

It has been suggested that as the need of a Mining School is quite as imperious, or more so, than one devoted exclusively to Agriculture, and as the finances of the State will not at present admit of the establishment of both, the two might be combined A school in which the two interests might be united would in no wise invalidate our claim to the government donation, or materially interfere with efficient progress in either branch of education.

In an economic point of view the importance of a Mining School far outweighs that of one exclusively devoted to agriculture. The assertion can scarcely be called extravagant that the annual *waste and loss* entailed upon this coast through a lack of a proper knowledge of mining is nearly or quite equal to our total agricultural products. Certainly the proportion of loss in the one from the lack of practical information is many times greater than that of the other. Still in the matter under consideration we simply desire to see both interests placed upon an equality. Our neighbors over the mountains have become fully alive to the importance of such an institution, and, at their recent election made the establishment of a mining school an integral portion of the organization of their proposed new State.

The mining interests of the Pacific Coast are becoming of such vast importance, that our State will be false to her destiny, if she fails through her Legislature, to take some early steps toward the establishment of at least one school, where the principles of the art of mining may be thoroughly taught—not where mining itself shall be taught, but where certain things about mining may be fully and thoroughly learned. Our own is the only enlightened nation on the globe that has neglected to make some provision of this kind, and it seems peculiarly appropriate that California, which is and must ever continue the leading mining State on the continent, should be the first to take this matter in hand. The advantages that would accrue from such an institution, are vast and manifold, and the present is a most opportune moment to move in the matter.

It is but a few years since any important movement, in this direction, has been made in agricultural matters; and who at this day doubts the immense advantages which have thereby been secured to that branch of industry? How rapidly has it advanced under such influences, both as an art and as a science. The culture of the soil through such instrumentality has not only been greatly utilized, but dignified as well, and elevated from a mere dull routine of drudgery to a noble and intellectual pursuit. Whatever has been accomplished in agriculture, and more, may be realized in the equally important and far more intricate pursuit of mining. The boundless wealth which our mines are revealing, and the immense national importance that is accruing from their yield ought to and will ultimately induce our National Legislature to foster and encourage their development, and lend a helping hand in collecting and collating such facts and information as shall have an important value in advancing the economic interest of this important branch of industry. It is to this end that a Mining Bureau has already been proposed at Washington. Let California make it manifest to the powers at our National Capital that her own people take an interest and are willing to extend some pecuniary aid in the establishment of a Mining School, and we may then look with a greater degree of confidence for speedy and liberal national action in that direction. "The gods help those who strive to help themselves."

The subject of Mining Education *in schools*, is so extensive and important that we propose to devote a column or two, for several successive weeks, to its examination and discussion. In the mean time we should be pleased to receive, for publication, practical suggestions from such of our correspondents and readers as may have in their possession facts with regard thereto, derived from personal observation in those countries where such schools have been established—facts either as to the mode of conducting them, or such as may have a bearing upon their practical value to the community.

THE MECHANICS' INSTITUTE AND FAIR.

There are few associations in California which have attained greater success, and none which has conferred more important benefits upon our industrial interests than the MECHANICS' INSTITUTE of this city. The Institute was organized on the 29th of March, 1855, with Benj. Heywood as President; B. B. Dexter, Secretary; H. F. Williams Corresponding Secretary and an efficient Board of Directors. It gradually augumented in numbers, and early laid the foundations for a library, which has been increased from time to time, as means would admit, until it now numbers 17,000 volumes. The library, as it now stands, has been pronounced by competent judges, one of the best selected of its kind in the United States.

The Institute has held three Industrial Exhibitions, and has just taken the initiatory steps for the fourth, which, it is confidently predicted, will not only diffuse new life into the mechanical industry of our State, but will also prove a substantial pecuniary benefit to the Association itself.

The meeting of the Institute, on Wednesday evening last, called for the purpose of empowering the officers to take the necessary steps for holding an Industrial Fair, during the coming Fall, was very fully attended. After an informal preliminary report from the officers, stating what arrangements could be made for holding such an exhibition, the question upon its propriety was put and carried by an unanimous vote. The arrangements proposed are highly advantageous for the Association, and such as to relieve the Institute almost entirely of any pecuniary risk, while the prospects of reaping a rich return, in case of success, are favorable in the highest degree.

The proposed arrangements for the accommodation of exhibitors were stated by the President of the Institute substantially as follows: The basement of Platt's Music Hall, on Montgomery street, is proposed to be made into a single room; the galleries to be planked over and widened 20 feet; and in the alley, leading from Pine street, a one-story temporary wooden building is to be erected to contain all the heavy machinery, ingress to which is to be obtained through a door to be cut through the brick wall of the hall. This wooden building as proposed, will be 137 feet long by 45 feet in width. Besides these rooms, the two small halls in the main buiding are to be connected with the principal hall, and an additional building will be erected on Bush street, next to Calvary Church. These buildings, and rooms, it is estimated will give more exhibition room than the Pavilion and outbuildings especially constructed for the accommodation of the Exhibition of 1860, which was held upon the ground now occupied by the Lick House.

We look forward with no little interest to this Fourth Industrial Exhibition, with the confident expectation that it will not only far exceed either of its predecessors, but compare favorably with any similar exhibition in any other State in the Union. The mechanical interests of California have made rapid and most wonderful progress within the last three years; a progress which we doubt not will be made most particularly manifest at the coming exhibition. It should be the efforts of mechanics everywhere, throughout the entire coast, to add their influence and contribute their efforts toward rendering the coming season an era in the mechanical and manufacturing progress of our growing Pacific Empire.

California, within the two or three years last past, has occupied no unimportant position in the field of INVENTION, and the proposed Fair will afford our mechanics a rare opportunity to bring their inventions to the notice of the public, by placing them on exhibition, where they will be seen by men from all parts of the State and adjoining Territories, not forgetting the new State of Oregon away up in the mountains to the north. By thus placing them on exhibition they will moreover secure for them a wide and extensive notice through the medium of the public press which will be on hand to notice and herald abroad everything new—especially in the line of California invention.

If we may be permitted, we would here offer the suggestion that the coming exhibition should be made, so far as is consistent, a *California Exhibition*—or rather one for the Pacific Coast. No competitors from the Eastern slope of the Rocky Mountains should be allowed to compete for premiums with our own mechanics. Imported productions and machinery, of course should be admitted, so far as there may be room, but should be separately classed and arranged, and allowed to compete only with those of its own class. It appears to us that an increased interest will attach to the proposed exhibition by making it essentially Californian.

OUR MINERS, too, will undoubtedly have a *fair* show at the Fair; a favor which they have never yet enjoyed, more, however, from the lack of opportunity, than from any want of disposition on the part of managers of similar exhibitions heretofore. The mineral display at the proposed exhibition will doubtless form one of its most interesting, most valuable and most attractive features. We presume that the fullest desirable arrangements will be made for a mineral display, which, if properly managed, will far eclipse anything which ever has been or which can be produced in any other country on the globe.

Perhaps we are saying too much, or making our remarks *inopportune*. But we feel a deep interest in everything which relates to the mechanical or mining industry of our State—especially whatever has for its object the promotion, welfare and advancement of the working man. We trust we shall ever be found ready to offer an encouraging word, and whenever it lays in our power, to lend a helping hand to whatever may promote the social intercourse, or elevate the moral and intellectual standing of our fellow mechanics.

ENCOUNAGING.—We acknowledge the reception of a hasty letter of congratulation from one of California's early Pioneers, now traveling in Europe, who is pleased to express much pleasure at being enabled to obtain an occasional sight of the MINING AND SCIENTIFIC PRESS, in those distant countries. We shall be pleased to hear from our correspondent as frequently as business engagements will admit of, and doubt not that he will be able to furnish much valuable information for the readers of the PRESS.

From Lower California.—Reports of a highly favorable character continue to reach us from the mines of Lower California. The Triunfo have their mill nearly completed. It will undoubtedly prove a complete success. The Picacho mill is about ready to work. The Franco-American mill is in need of a practical operator. They have good ore, but the pans don't yield as they should do when their work is compared with the arastra. The Santa Cruz Co. are having a fine steam engine erected upon their claim. The Peninsula and Trinidad Companies are also about to put up a 20-stamp mill.

The La Marroneña Company appear to have the best vein of metal on the Peninsula. They have recently sold about 200 tons of their ore for $30 per ton at the shaft, and can do the same every month. The company expect to commence declaring dividends soon. The cost of extracting their ore is about $5 per ton, and, with sales at $30, they will realize the handsome profit of $25 per ton, or $5,000 per month, to be divided among 1,000 shares, equal to 2½ per cent. per month on $200 per share.

The San Antonio Company are coming into a fine vein of metal. The Peña Company's tunnel is almost completed. This mine has an abundance of ore, and three veins running through its ground. It is one of the most promising mines in the district. The top vein works $120 to the ton in silver. The Kohler Bros. claims are being well worked, and the Espenosaña mine can turn out 5,000 tons of ore per month. In short, this is a most flourishing mining district, and its mines already occupy an important position in the silver mining share market.

Magnificent Specimens.—A lot of magnificent specimens of silver ore was shown us a few days since from the Carmen mine, near Batapilas, in Chihuahua, Mexico. Some three hundred pounds of this ore—bullion would be a more proper term for it—was recently brought to this city, as evidence of the value of the mine. This ore is valued at $27,000 per ton, and we do not believe it is over estimated. We understand that three-fourths of this mine recently changed hands at $25,000 per share. Some of the finest specimens of native silver, in its massive state, ever found, have been taken from this mine. Dana, in his "System of Mineralogy," page 535, mentions a specimen weighing 400 lbs, which was taken from it. Native Silver is seldom found massive; it usually occurs in arborescences or filiform shapes. Filiform or "wire silver" is its most common condition when found native. In the town of Batapilas some of the richest specimens of this ore passes as currency at the rate of $7 per mark (eight ounces.) One of the specimens, selected from the above mentioned lot and weighing 20 pounds has been sent to President Lincoln. This specimen showed a vein of native silver fully an inch thick, running entirely through it. It will probably astonish the chiefs at the National Capital.

The Beauty of the Kindlier Season is well upon us. Even in the slant sunbeams of mid winter, we of California are blessed with summer scenes and bright green fields, beautified with starry flowers. While our Atlantic friends, in corresponding latitudes, are suffering from pinching frost and traversing snow-clad fields, we, of the genial Pacific slope, walk forth upon the beautiful greensward, tinted with fairy blossoms, or along our gravelled walks fringed with living verdure, as livid and beautiful as we erst did witness in the gay spring time of our Eastern homes. No darkening frost ever spreads its withering pall over a San Francisco landscape. Fairies here, may ever find their blooming dells and sylvan grottoes wherein to trip the mimic dance. No fair Italian sky breathes softer zephyrs than are oftimes wafted over our own beautiful bay, even in what the almanacs style our wintriest month. Who that has experienced it is not delighted with our California climate and California scenery—and, indeed, with everything else in our Golden State that is not needlessly and wickedly abused!

MINING SHARE MARKET.

The mining share market still continues active, with large transactions in speculative shares, but not generally declining rates. The total sales of the week since our last issue, foot up at $1,832,290 37, exceeding by upwards of $800,000 the sales of the previous week.

Ophir shares have been moderately dealt in, at lower rates than ruled last week. A slight improvement was manifested yesterday. The company is somewhat reticent with regard to its business affairs, yet it is considered to be in a prosperous condition, and retains the entire confidence of capitalists. The receipts of the Company from December, 1862, to December, 1863, were $1,874,863; $1,080,529 92 were disbursed in current expenses, for the purchase of Virginia Mine, etc., and $625,200 were paid in dividends—an average of $39 per foot per month.

Gould & Curry declined to $4,925 on Tuesday and Wednesday, but recovered to $4,975 on Thursday, at which figure it is firmly held, with but little offering.

Savage has materially improved, and is much sought after. We quote sales at $3,000 on Tuesday, an advance of over $200 since last quotation. On Wednesday it met with still further improvement, and found buyers at $3,100. During the past five months this mine has yielded in bullion $413,125, and the Company have paid since August last monthly dividends of $50 per foot.

Challar has rallied somewhat, but has been lightly dealt in the past week at fluctuating rates. We understand that highly favorable reports were received from the mine yesterday, to the effect that ore of remarkable richness has been struck in the third gallery. Closing sales yesterday are quoted at $395, with an upward tendency. Stockholders in this mine have been thus far assessed to the extent of about $110 per foot, or $300,000 in the aggregate, which, together with the current assessments, has all been absorbed in improvements, etc.

Hale and Norcross still continues inactive. We quote a single transaction at $800; holders firm at $885. Favorable reports are coming to hand from the mine. This stock has been assessed to the present time to the amount of $225 per foot, and is out of debt.

Lady Bryan is less active than for a few weeks past. We quote sales of 1,655 shares at from $53 @60.

The Desert is also declining in interest, but is firmly held at from $20@22.

Burning Moscow is comparatively quiet. Sales have been made the past week at declining rates. From $135 on Monday, it gradually declined to $105, b 30@110 yesterday. Since the incorporation of this Company, $45 per foot on 2,400 feet has been assessed and paid into the treasury, and $10 per foot upon 4,100 feet is now delinquent, amounting in all to $149,000—equivalent to $36 34 per foot on the present number of shares. $50,000 in bullion has been taken from the mine.

North American is well maintained at about last quotations. We quote closing sales at $88.

Baltimore American has declined a shade. We quote sales of 363 shares at from $33½@37½. An assessment of $5 per foot was levied some ten days since.

Burnside is enquired for to considerable extent, and has met with buyers at from $15@20. 426 shares have changed hands since our last issue.

Adriatic has found buyers during the week at from $12@13.

Blue Ledge has been considerably enquired after at improving rates. We quote sales of 228 shares at from $9@12.

Josephine is not in much request. We quote at 130.

Harmon has been considerably enquired for the past week at considerable advance. We quote sales at from $20@25. We understand some very fine specimens were received from this mine yesterday from a recent favorable development.

Melones which had declined within the past ten days from $60@40, recovered yesterday to $45 @50. We learn that the company has again struck rich rock.

Real Del Monte has formed the chief feature of the market during the past week. 2034 shares have changed hands gradually declining rates. The market opened on Monday at $280, and continued to decline, with large sales, until yesterday when it reached $165. Large sales were made the previous week, at from $240@360. Various reasons are assigned for the sudden and important decline in this stock. But as no information has reached us of an authentic character, we refrain from particular comment. We learn from good authority that in the settlement with the Pond and Ural companies the Directors of the Del Monte made over to them 417 shares of Del Monte stock, which they (the Directors) went into the market and purchased. This purchase, we have further understood, was made at a high figure and on long time, to be paid from the net earnings of the mine.

Wide West has met with about its usual business. We quote sales of 96 shares at from $45 @ 55.

Silver Hill has been in some demand at declining rates. Opening at $20, it gradually declined to $15 and $16, b 30, at yesterday's Board.

Utah has been in but little demand. We quote sales at from $23 @ 25.

Antelope continues in favor; has found buyers at from $257½ @ 260. This stock is held firmly; but little offering.

Sheba is inactive. We quote sales of 20 shares at $145, and 38 shares at $130. The condition of this company is by no means unfavorable as may be gathered from the following paragraph which we clip from the last issue of the Associated Stock Brokers' Circular: "The company intend shipping to Europe, in April next, about 75 tons of first class ore, which, it is thought, will yield $800 per ton. The expense of transportation hence from the mine will amount to $75 per ton. There are also 1,200 tons second class ores on hand at the mine, assaying from $250 to $500. This company is represented as being out of debt, with sufficient funds in the treasury to continue operations for the ensuing 90 days—$57,600 ($32 per foot) has thus far been levied.

Amador, R. R., is held at about $300. Work on the several tunnels of this claim are said to be progressing rapidly, and a large number of men are employed. By means of ditches and open cuts the lode has been traced a distance of 2,000 feet, and at every point where exposed valuable ore is to be seen. There are 250 tons of ore on hand at the mine.

A Mining Advertiser.—Next Saturday we shall issue a "Mining Advertiser," by placing the advertising pages of the Press, with the stock reports and other matter, into a smaller sheet, several thousand copies of which will be circulated gratuitously throughout this city and the interior of California and Nevada Territory. We do this to give mining companies the benefit of an extraordinary large circulation for their advertisements, and present a channel through which all mining notices may be cheaply consolidated into one sheet for the convenient reference of all stockholders. Secretaries of companies will please hand in their favors as early in the week as possible—not later than Friday. Rates for advertising mining notices, $2 50 per square of ten lines, per month. Advertisements will appear both in the Press and Advertiser.

"None so Blind as those who do not wish to See," etc.—We are happy to notice the generous reception given the recent improvements of the Press, by the interior journals of the State, which contrasts significantly with the mute silence of our neighbors in this city. From the latter class, however, we make honorable exceptions of the religious *Evangel* and *Gleaner*, and the *Sunday Mercury*.

Important Success.

Those of our readers who were with us some eight months since, will recollect that we gave a detailed account of the successful working of a new process for treating gold ores—particularly those largely charged with sulphurets—which had just been introduced into the Pikes Peak mines. This process was known as the "Keiths Desulphurizing Process." Soon afterward we understood the process did not promise so well, but that further experiments were to be made, which it was confidently predicted would result in a more unqualified success. We have watched with much interest for further developments, which have at length come to hand in the *Colorado Mining Register* of December 31st, from which we extract as follows:

Our mining men have long looked with anxiety upon every new method of treating ores introduced here. The fact that we have been able to obtain not more than twenty-five per cent. of the gold contained in them, and that it has frequently been much less, had induced the hope and belief that some method should be discovered whereby better results might be obtained. The results obtained a year ago by Dr. Keith, by means of desulphurization and calcination, gave rise to the expectation that his method would succeed. Imperfections, however, in the machinery and apparatus employed, gave a serious check to the anticipations of those not directly interested in the experiments which were being made. Nothing daunted by the apparent failure, Mr. Keith returned to New York, and formed a powerful company there under the name of Keith, Mohler & Co. They brought here last summer the finest engine in the Territory and with it several modified Howell crushers and other machinery. They have now got it in working order, and last week made their first run. They crushed one cord (14,700 pounds by actual weight) of second quality ores from the Gregory Lode, such as have hitherto yielded only $100 per cord by the usual method. This, after being desulphurized and calcined, weighed only 8,871 pounds, or but little more than one-half the original amount, the waste, composed of sulphur and other volatile substances, having passed off in vapor. The ores, after being thus treated, were run through a Frieburg pan for amalgamation, and yielded thirty-six ounces of superior retort, worth $864 in currency. This, as will be seen, is nearly nine times the amount formerly obtained.

We give this statement of the result of this run, and of the quality of ores, as reported to us by Dr. B. Keith, in whose statements we have the fullest confidence. Previous experiments have given similar results, and afford increased proof of the utility of the process. The result is a very flattering one to the people of Colorado, as the practicability of this method is now fully demonstrated. From eighty to ninety per cent. of the gold can by this method be constantly saved from the ores. It also enables our people to work successfully a class of ores well known to be rich, but from which we have hitherto failed to separate the gold on account of the presence of arsenic, antimony and other metals and substances which are readily volatilized.

It will be noticed that the above is but the result of a first trial, with the new machinery. We shall look with much interest for further developments. Should they continue favorable we shall again lay before our readers a full detail of the process, together with such improvements, so far as we can obtain them, as have recently been made.

Terrific Locomotive Explosion.—A terrific locomotive boiler explosion recently occurred on the Central Railroad, in New York, while the train was under headway. The boiler itself was thrown 825 feet into an adjoining field. The balance of the locomotive was thrown in every direction.

A Mining Stock Board has recently been established at Victoria. Transactions will hereafter be regularly quoted. The fact is important as showing the permanency of the mines in that region, and that capitalists are inclined to encourage their development.

Mail *via* Henness Pass.—At the instance of Senator Conness bids will be asked in the next schedule for carrying the mails between Nevada Territory and California over the Henness Pass route.

Mining Laws---A Good Suggestion.

The Calaveras *Chronicle* makes the following excellent suggestion with regard to collecting the local mining laws of the State for preservation and convenient reference. It is certainly a most important and very proper matter for legislative action:

"There should be some method devised by which the Mining Laws of the different districts could be so consolidated and arranged that in each county, at least, there would be a written code, which should be published and preserved in the Recorder's office. At present every mining district has its rules and regulations, and it is often impossible for parties to find out the laws of any particular camp. The Courts respect the laws of each district, but as there has been no provision made for publishing them, they are liable to be lost or destroyed, thus subjecting parties litigant to much trouble and expense. We now have the advantage of a long experience in mining, and know the wants of the miners, and it would not require much time for a body of delegates, elected from the mining districts, to frame such laws as are needed within the bounadaries of a county. Gold, silver and copper interests could be arranged under appropriate sections, so that there would be no conflict between the several kinds of mining. The advantages of such a system are apparent to all; and if the Legislature would pass an Act authorizing such conventions, and make their laws valid, we believe all of the mining counties would adopt the proposition. The tendency would be to lessen litigation, as much of it is now caused by parties trespassing upon the rights of others through ignorance of the mining laws of the district.

Gross Carelessness.—It appears by the full accounts which have now come to hand, detailing the loss of the iron-clad Weehawken, that she went down through sheer carelessness on the part of her officers and crew, some thirty of whom found a watery grave with her. Her commander was absent at the time, aboard of the flag-ship, in consultation with the Admiral. The ship lay very low in the water, and it appears that the forward hatch was carelessly left off, into which the water rushed, in a continuous stream, as soon as the gale became sufficiently furious to raise a very heavy swell. The officers in charge were not aware of their danger until it was too late to save the ship—a panic having seized the crew as soon as the alarm was given.

Mechanics' Institute Lectures.

A COURSE OF THREE LECTURES WILL BE DELIVERED before the Mechanics' Institute at Music Hall, by the following named gentlemen, who have kindly volunteered their services:—

Professors BREWER and WHITNEY, of the State Geological Survey, and Rev. T. STARR KING.

The Lectures will be delivered as follows:—

THURSDAY EVENING, January 14th, 1864, by Professor Brewer. Subject: Mountain Scenery of California.

THURSDAY EVENING, January 28th, 1864, by Professor Whitney. Subject: —— ——.

THURSDAY EVENING, February 11th, 1864, by Rev. T. Starr King. Subject: —— ——.

Single Tickets, $2; Tickets for Gentleman and Lady, $3.50; Tickets for the Course for a Gentleman and Lady, $4. 2-tf

ENLARGEMENT

—AND—

Important Improvement

—OF THE—

MINING AND SCIENTIFIC PRESS.

Enlarged from Eight to Sixteen Pages at the Commencement of Volume VIII, January 1st, 1864.

Two Volumes (of 416 Pages Each) per Annum.

PUBLISHED EVERY SATURDAY.

SUBSCRIPTION TERMS IN ADVANCE:

One Volume, six months,.....$3.00
Two Volumes, one year,..... 5.00
Five Copies, one year,.....20.00

The present proprietors of this journal announce with confidence their determination to render to the friends of Science, Mining and Mechanical Industry a newspaper published upon this coast worthy of their patronage at home and their pride abroad. We shall seek favors only through our endeavors to merit them.

The Editorial Department

Will be conducted with ability, in a liberal and reliable manner sparing not in expense, veneration for honesty, or respect for common sense.

Competent Correspondents

Will be employed to furnish us full and reliable information concerning newly-discovered mines; and through vigilant efforts we shall secure for our readers the latest intelligence from all important mining localities. In our list of

Occasional Contributors

We have the privilege of numbering gentlemen ranking among the most talented and experienced writers who manifest a prominent interest in the progress of Art and Science upon this coast, including the names of

Prof. J. D. Whitney, J. H. Churchill, A. M.,
Dr. T. M. Logan, A. B. Paul,
Dr. J. A. Veatch, H. S. Brooks,
Rev. O. C. Wheeler, W. Wadsworth.
M. Atwood, T. Price.
Prof. W. H. Brewer.

Illustrative Drawings and Engravings

Superior in finish and useful and attractive in character, will be published from time to time, representing the most important new inventions and improvements in the art and science of

Mining and Mechanism

Developed upon this Coast. Each number of the paper will contain full and correct reports of

Sales by the Stock Boards of San Francisco.
Sales by the Stock Board of Virginia City.
Sales by the Stock Board of Esmeralda.
Sales by all Mining Stock Boards.
Reports of Bids and Sales in San Francisco.
Reports of Bids and Sales in the Territory.
A Weekly Review of the Stock Markets.
A Weekly Review of General Mining Interests.
General Summary of California Mining News.
General Summary of Mining everywhere.

Valuable Information for all Miners.
Indispensable Knowledge for practical workmen,
Practical Suggestions for intelligent artizans.

Valuable Facts and Statistics

Essential to members of all trades and professions; the best approved methods of mining; the latest discoveries and inventions in mining operations; practical, scientific views upon geological and mineralogical questions; the proper methods of reducing ores and saving the precious metals. In fact every sentence calculated to lessen the number of hard blows uselessly rendered by miners and working men, and add wealth by intelligent saving of material or labor, will find welcome space in our columns. The paper will afford many

Practical Hints

With regard to the manner of working and securing mines, derived from the actual experience of parties in our own and other countries. Also hints concerning the location and possession of mining grounds; the laws peculiar to different districts and countries; and notices of all important decisions of the law in mining cases. As a

Book of Reference

The bound volumes of the Press will find no rival in value to the intelligent and industrious citizens of the Pacific Coast, who cannot but feel a source of pride in the history of the inventions, discoveries and prosperous developments of the remarkable era through which we are now passing.

The Stock Record

As presented in our columns will be found correct, distinct and most convenient for preservation and future reference.

For Sending Abroad.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and Newsdealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the Press can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

DEWEY & CO., Publishers.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Business Cards.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

Must be seen to be Appreciated!

THE FLORENCE!

A GREAT IMPROVEMENT!

THIS CELEBRATED

NEW SEWING MACHINE

IS ACKNOWLEDGED TO BE

THE BEST IN THE WORLD!

IT MAKES FOUR DISTINCT STITCHES!

IT FEEDS THE WORK EITHER WAY!

WILL SEW OVER THE HEAVIEST SEAMS,

WITHOUT CHANGE OF TENSION!

IT SELDOM, IF EVER, DROPS A STITCH!

IT SEWS WITH SILK OR COTTON THREAD EQUALLY WELL!

IT RUNS LIGHTLY, SEWS RAPIDLY AND IS ALMOST NOISELESS!

IT DOES THE HEAVIEST OR FINEST WORK WITH EQUAL FACILITY!

IT MAKES A STICH ALIKE ON BOTH SIDES OF THE FABRIC, USING ONLY HALF THE QUANTITY OF THREAD NECESSARY FOR THE OLD FASHIONED CHAIN-STICH MACHINES!

WHILE IT POSSESSES ALL THE GOOD QUALITIES OF others, and has many advantages over any and all of them, the FLORENCE is sold at corresponding prices with other first-class Machines. We

WARRANT EVERY MACHINE

To be all that we claim for it, and will give a WRITTEN WARRANTY if required.

AGENTS WANTED in all the principal cities and towns on the Pacific coast.

Send for Circulars and samples of sewing.

DON'T BUY A SEWING MACHINE UNTIL

YOU HAVE

SEEN "THE FLORENCE!"

SAMUEL HILL, General Agent.

Mr. Jarvis Jewett is our duly authorized advertizing agent and collector in this city.

SILVER BRICKS.—A couple of "specimens" in the shape of silver bars were shown us on Thursday, by Mr. P. H. Cummiog, Secretary of the Troy Co., Reese River. The aggregate weight of the two is $39.11, being the yield from 40 lbs of rock worked at the Pacific Metallurgical Works in this city. This gives us the rate of $1,955.50 per ton, but Mr. Foque, Superintendent of the Works, is confident that by working in large quantities, thereby avoiding the waste necessary in redneing small amounts, the rock will exceed $2,000 per ton. The Troy claims are located about half a milu North of Austin, in Reese River district, and the lode is 2½ feet in thickness of pay rock, 8 inches of which is first class. The company was incorporated last November, and without a single assessment having been made, there is now over $1,000 in the treasury of this company, realized from ore already crushed. Their incline is down 35 feet and the Faris Mill is now working ore from the ledge, returns from which are expected soon. Mr. W. H. Clow, who also visited our office at the same time on Thursday, showed us a small silver brick from the Dacotah ledge, near Austin, takea from only eight pouuds of rock, worked by Varney, uf this city, which weighed five ounces. Numerous other tests have been made from this uine, the most of which came up to the above. Mr. Billet also exhibited fine specimens of ore from the Shakspeare ledge, Reese River district, which had been submitted to a strong fire heat, by which the silver was brought to the surface and in large globules, giving unmistakable evidence of its richness. He also exhibited specimeas from the Gen. Scott ledge, Augusta district.

Such evidenees of the richness of our silver mines are uamistakable in their character, aad may be considered but the preliminary and scattering drops of a perfect deluge of bullion which is soon to pour down upoa us froai the silver mouataius of the Eastera slope. Let it come.

THE VIRGINIA DAILY UNION.—We are pleased to place this excellent daily on our exchange list. The Virgiuia papers are a good illustratiou of the enterprise of that city and Territory, and the *Union* leads the vaa.

The Publication of Mining Notices in the MINING & SCIENTIFIC PRESS obtains for them a more general circulation, among parties directly interested, (in this city and throughout the mining districts of the coast, than can be secured through any other medium. State laws require their publication but once a week, and Secretaries and Trustees can make a material saving of costs to stockholders by ordering their advertisements inserted in the journal most properly entitled to receive their patronage—the weekly MINING AND SCIENTIFIC PRESS.

MINING ILLUSTRATIONS.—We give upon the first page of the present issue a diagram of the Washington copper mine, located at Indian Bar, Tuolumne county. We shall continue such illustrations from time to time as they may present themselves. We hope soon to be able to lay before our readers underground diagrams of most of our leading mines. Such illustrations will be found not only interesting to our readers, but useful to the companies, conveying to stockholders and the public important information which can be communicated in no other way. Mining companies who may desire to have a correct illustration of their mines presented to the public and their stockholders, are requested to communicate with this office.

OUR TRAVELING AGENT, J. M. Wolf, contemplates an early visit to Nevada, Placer and El Dorado counties, and Nevada Territory. Mr W. is an observing and reliable gentleman, and our friends in sections visited by him, will confer mutual favors upon themselves and us, by giving him a cordial reception.

Bankers Gold and Silver Mining Company, Gold Hill District, Storey county, N. T.—Notice is hereby given that the Trustees of the Bankers Gold and Silver Mining Company have this day levied an assessment of fifty cent per shares on each and every share of the capital stock of said Company, said assessment payable immediately, in gold coin, to the Secretary, at the office of the Company, No. 602 Washington street, or to R. C. O'NEILL, Superintendent, at Gold Hill, N. T. W. AUGUSTUS KNAPP, Sec'y.
January 18th, 1864. 4v8-1m

Prima Donna Gold and Silver Mining Company, Devil's Gate District, N. T.—Notice is hereby given, that the Board of Trustees of the Prima Donna Gold and Silver Mining Company, at a meeting of said Board, held January 18th, 1864, levied an assessment (No. 5) of fifty cents on each and every share of the capital stock of said Company; said assessment payable immediately, in gold coin, to the Secretary, at the office of the Company, No. 620 Washington street, Room No. 3.
4v8-1m H. B. CONCDON, Secretary.

Table Mountain Copper Mining Company, Office 528 Montgomery street, San Francisco, January 16, 1864.—Notice is hereby given to the stockholders of the Table Mountain Copper Mining Company, that an assessment (No. -) of one dollar ($1) per share was this day levied on each and every share of the capital stock of said Company, payable immediately, in U. S. gold coin, to the Secretary, or to J. M. PIKE, Superintendent, at Copperopolis. By order of the Board of Trustees.
4v8-1m M. C. ELMORE, Secretary.

OFFICE OF THE
SANTA CRUZ PETROLEUM OIL WORKS,
GEM SILVER MINING CO., (REESE RIVER, N. T.,)
LAUREL G. & S. MINING CO., COPALA, SINALOA, MEX.

N. B. Mr. Ingols will pay particular attention to the adjustment of complicated accounts, Commercial and Incorporated Companies' Books, to drawing up Commercial writings and to Engrossing legal or other documents with neatness and dispatch. An experience of more than twenty-five years in every branch of his profession is a guaranty of his practical and thorough acquaintance with its duties. He has the privilege of referring to some of the leading mercantile houses and legal practitioners on the Atlantic and Pacific sides, for testimony of his business and clerkly abilities. jlu.

VARIOUS CHIPPINGS.

—Philadelphia is talking of a mammoth heating apparatus, the heat to be distribnted after the manner of gas.

—A newspaper is about to be establisihed at Como, Palmyra district, Nevada Territory. Como is a town rapidly growing into importauce.

—Admitting that horse-races improve the hreed of horses, it may be a fair question whether they impove the breed of men.

—Oue county in Indiana has given four hundred wagon loads of provisions to the Sanitary Commission.

—Fire-wood is selling at $18 per cord, delivered from wagons, in Virginia City.

—The new quartz mill at Como, Palmyra, is now regularly at work.

—Riches are no evidence of personal worth. The Colchian ram had a fleece of gold, hut he was probahly very poor mutton.

—A direct mail communication through Southern California to Arizona and New Mexico, is urged, instead of the round about one via Salt Lake City.

—Ex Controller Warren's bondsmen, at Stockton, are throwu iuto great consternation by his exit. Suit has heen commenced against them. They arc all wealthy men.

—Many persons write articles and send them to an editor to he corrected—as if an editor's office was a house of correction.

—There were in Great Britain, in 1862, 738 fatal colliery nccidents, involviug the loss of 1,133 lives.

—Air, food, sleep, and the cheerful emotions, are the best restoratives to exhausted nerves.

—In 1816 the hest printiug press would only throw off three hundred impressions an hour; at the present day twenty-five thousand is attainable in the same space of time.

—The Florence sewing-machine Co. at Northampton, are to erect a uew factory 35 hy 150 feet, and 3 stories high.

—The coal fields of the U. S. cover an area of more than 200,000 square miles.

—Of all the dust thrown in a man's eyes gold dust is the most hliuding.

—The right of way for a macadamized road through the Presidio reserve, has been granted by the War Department.

We have now in the United States at least 235 general hospitals for the use of the soldiers, containing ahout 80,000 patients.

Spare minutes are mighty laborers if kept to their work. They overthrow or build np, enrich or impoverish a man.

A man of philosophical temperament resemhles a cucumber—for although he may be completely cut up, he still remains cool.

A journalist has discovered that, all things considered, railways are very slow, and behind the age. He says that wheu traveling, he blushes to think that the Message over the telegraph flies like lightening, while he is lazily creepiug along at only thirty or forty miles an hour.

Music is the only earthly bliss that the imaginations of men have transferred to Heaven.

The total number of saw-mills in the State is 218, which turn out per annum 111,735,500 feet of lumher, and 22,967,000 shingles.

At thirty we are trying to cut our names in hig letters upon the walls of this tenement of life; twenty years later we have carved it or shut up our jack-knife.

Artemus Ward cleared $10,000 by speakiug "pieces," in California.

The above fact, if it is a fact, can scarcely be accounted as complimentary to the good sense and taste of Californians.

A factory is heing fitted up on Napa creek for the manufacture of smoking and chewing tohacco.

The Brooklyn Common Council has passed a law that no person shall be required to pay fare on any horse car unless furnished with a seat. Let us have the same regulation in San Francisco.

Drop by drop falls into the clear well spring of youth the bitter water of experience, and there is no filter this side of the grave that can restore the old purity.

Miscellaneous Advertisements.

MINERS' FOUNDRY
—AND—
MACHINE WORKS,
First street, between Howard and Folsom streets,
SAN FRANCISCO.

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

CROCKER'S
STOCK AND ASSESSMENT LEDGER.
Copyright secured—Price $10.
The necessity of a proper book for keeping the Stock and Assessment accounts of Corporations has long been very much needed. One that would combine economy and simplicity, and would not require the services of an experienced book-keeper to keep the accounts correctly. CROCKER'S STOCK AND ASSESSMENT LEDGER has met this requirement; we have submitted it to several Secretaries of corporations, and they acknowledge that the plan is admirable, and just what has long been wanted. The printed headings are a perfect explanation of the manner of keeping it; and any person, whether they understand book-keeping or not, cannot make an error in the accounts. The Stock and Assessment accounts are so arranged that the Secretary can in a moment tell how any Stockholder's account stands, both in regard to Stock and Assessments. He can also, with the greatest ease, trace any certificate, through any number of transfers, to the original one issued. It saves a great amount of labor, as it does not require one-fourth the writing of the ordinary method. It dispenses entirely with the old style of Stock Ledger, Stock Journal and Assessment Book, all three of which Secretaries have heretofore been obliged to keep, condensing the whole in one book. To a person who is Secretary of several companies, this book will prove invaluable, and we feel no hesitation in guaranteeing satisfaction to those who may order them. Specimen sheets sent to those who desire to examine it. The books are ruled with one or two accounts to the page. State which is preferred.
Published and for sale, wholesale and retail, by
H. S. CROCKER, & CO.,
Book and Job Printers, Sacramento.

Certificates and complete sets of books for Corporations, in the finest style, at short notice, and low rates. 7-1m

WHEELER'S
Amalgamating and Separating Pans.
It is acknowledged by all who have examined the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.
The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.
Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.
*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

Verona Gold and Silver Mining Company.—San Francisco, January 12th, 1864.—Notice is hereby given, that at a meeting of the Board of Trustees of the Verona Gold and Silver Mining Company, held this 12th day of January, 1864, an Assessment of Fifty (50) cents per share was duly levied on each and every share of the Capital Stock of said Company, due and payable immediately, in United States gold coin, to the Secretary, at his office, No. 57 Government House, or to O. L. Church, Superintendent, at Austin, Reese River. (3-3t) WM. POOLER, Sec'y.

Carrie Copper, Gold and Silver Mining Company.—The First Annual Meeting of the Stockholders of the Carrie Copper Gold and Silver Mining Company, will be held at the Company's office, No. 628 Clay street, on MONDAY, February 1st, 1864, at 3 o'clock P. M., for the election of officers and the transaction of such other business as may come before it. (1-1m) B. W. MUDGE, Sec'y.

Puritan Gold and Silver Mining Company, (Devil's Gate District, N. T.)—Notice is hereby given that the Trustees of the Puritan Gold and Silver Mining Company have this day levied an assessment of one dollar on each and every share of the capital stock of said company; said assessment payable immediately in gold coin to the Secretary, at the office of the company, No. 623 Washington street. H. B. CONGDON, Secretary.

December 26, 1863. 1-m

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Conqueror Gold and Silver Mining Company.—Office southeast corner of Front and Sacramento streets, San Francisco December 29th 1863—At a meeting of the Trustees of the Conqueror Gold and Silver Mining Company held this day, an assessment of Twenty-five (25c.) Cents per share on each and every share of the capital stock of the said Company was levied, now due and payable immediately in U. S. gold coin, to the Secretary, at the above named office. By order of the Board of Trustees.

j2-1m WM. W. KNIGHT, Sec'y.

Enterprise Copper Mining Company.—Office . 528 Montgomery street, San Francisco. At a meeting of the Board of Trustees of this company, held December 12th, an assesment of ten cents per share was levied, payable immediately, and another assessment of eight cents per share, payable January 1st, 1864, and another assessment of eight cents per share payable February 1st, 1864, all payable in U. S. gold coin, to Thomas S. Levy, the Treasurer, at Lincoln, Placer county, or to the Secretary, at the office of the Company. By order of the Board of Trustees.

M. G. ELMORE, Secretary.

Occidental Copper Mining Company, Office northeast corner Pine and Montgomery streets, San Francisco, December, 29th, 1863.—An assessment of Thirty Cents per share was this day levied on each and every assessable share of the capital stock of the Occidental Copper Mining Company, payable immediately to the Secretary, in U. S. gold coin. By order of the Board of Trustees

EDW. BARRY, Sec'y.

Fair Haven Gold and Silver Mining Company, Cortes District, Reese River.—At a meeting of the Trustees of the above Company, held Dec. 29th, 1863, an assessment of Seven Cents per share was duly levied and made payable immediately at the Office of the Secretary, 400 Front Street.

W. H. DANIELS, Secretary.

Hudson Gold and Silver Mining Company, (Devil's Gate District,) office No. 804 Montgomery street, San Francisco, December 19th, 1863.—At a meeting of the Board of Trustees of this Hudson Gold and Silver Mining Company, held this day, December 19th, 1863, an assessment of One Dollar per share was duly levied on each and every share of the Capital Stock in said Company, due and payable immediately, in United States gold coin to the Secretary, at the office of the Company, in this City, or to A. W. Hale, Esq., Superintendent, at Virginia City.

j2-1m I. LAWRENCE POOL, Sec'y.

Sarah Frances Gold and Silver Mining Company, Markleville.—Assessment No. 7. of Fifteen Cents per share, was levied by the Board of Directors, December 28th, 1863 payable to FRANCIS V. SCUDDER, Sec'y.

Rooms of the Company, 9 and 10, northeast corner of Montgomery and Pine streets. j2-1m

San Francisco Stock and Exchange Board.—Rooms Brokers' Block, Montgomery street. President, J. B. E. CAVALIER: Secretary, FRANKLIN LAWTON.

San Francisco Board of Brokers.—Rooms 430 Montgomery Street. President, SAMUEL PURNY; Secretary, M. G. ELMORE.

Pacific Board of Brokers.—Rooms on the corner of Washington and Montgomery Streets, San Francisco. President, W. P. DENCKLA; Secretary, J. H. GAGER.

California State Library.—Rooms corner of J and Second streets, Sacramento. Hours from 9 A. M. to 10 P. M., during the session of the Legislature, and from 9 A. M. to 4 P. M. at other times. Free to all. W. STRATON, State Librarian.

STOCKTON.—Patrons of the *Press* will obtain the paper at the News Store of Kerski Bros, who receive them by Sunday morning's boat.

Zenith Gold and Silver Mining Company, Office 530 Jackson street, San Francisco, January 6th, 1864.—Notice is hereby given, that, in accordance with the laws of the State of California, there will be sold at public auction, at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, San Francisco, on MONDAY, February 8, 1864, at 11 o'clock A. M., to the highest bidder for cash, in United States gold coin, so many shares of the capital stock of the Zenith Gold and Silver Mining Company, standing in the names of the following shareholders, as will be necessary for the payment of three assessments duly levied by the Board of Trustees, as follows; to wit: Assessment No. 1, Twenty-five cents per share, levied September 24, 1863; Assessment No. 2, Twenty cents per share, levied October 13, 1863; Assessment No. 3, Thirty cents per share, levied December 2, 1863, together with costs of advertising and expenses of sale, unless said assessments, with accruing charges, are previously paid:

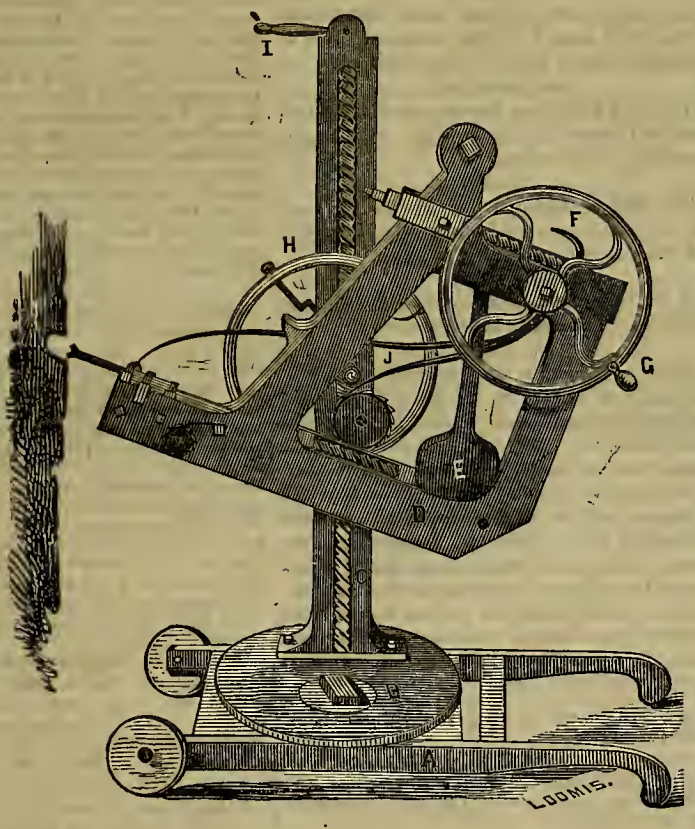
ROCK DRILLING MACHINE.

The accompanying cut presents a very distinct and accurate representation of the "Rock Drilling Machine" recently invented and patented by Mr. J. S. French, of this city. It is expected, and judging from the execution which it will effect in a few moments of operation, we think that it is claimed with reason, that this machine will perform the work of at least four men working with ordinary hand drills. A careful examination of the accompanying illustration cannot fail to satisfy any mechanical mind that the machine is simple in its construction, compact, and is easily moved from point to point, as may be required for its safety when in actual use in a tunnel or dritt:—A, is the foundation, formed similar to common two-wheeled hand truck. B, is a turn-table, which can make an entire revolution horizontally. C, is a column resting upon the turn-table B, containing a screw upon which the drilling frame D rests, and by which it is raised or lowered the full length of the column. D, is a drilling frame. E, is the hammer. F, is a cam by which the hammer is drawn back and at the same time pressed upon two spiral springs, located near the journals of the cam, by which the blow of the hammer is given. G, is the balance wheel which operates the whole. H, is a circle attached to the drilling frame D, by which the drill can be held at any angle desired with the column C. I, is a crank which operates the screw in the column C. J, is a double arm for driving back and turning the drill.



FRENCH'S ROCK DRILLING MACHINE.

In the construction of this machine, it has not been the object of the inventor to introduce any new principle, but simply to work the common hand-drill by machinery. This the machine does most effectually. The drill is held, turned, pressed firmly against the rock at the moment of receiving the blow, and the blow, itself given, with a hammer; all precisely as in ordinary hand work. At every back motion of the hammer the drill is drawn back, slightly turned, (according to the nature of the rock.) and immediately pressed firmly against the rock, in which position it receives the blow. The drill can be presented and be made to work at any desirable point in the face of the tunnel, or upon the roof, floor or sides. The machine is sixteen inches wide, three feet long, six feet high, and weighs five hundred and fifty pounds.

The advantages which will accrue to California from the successful introduction of this machine, are incalculable. The cost of running hard rock tunnels would be so materially reduced, that the number of lodes prospected would soon be doubled, adding within one or two years, doubtless, hundreds if not thousand of paying claims.

Any further information with regard to this machine may be obtained on addressing this office by letter, or by applying to the patentee, J. S. French, Esq., of this city.

Human Fossils in California.

An article has recently appeared in a cotemporary, with the above title; in which the writer has carefully collated all the evidence, within his reach, to prove that man existed in California, long before the historic period. Much of the material is of value, but there are a few errors, too grave to be passed over in silence. "There were giants in those days," is an old text, and one very often misapplied. The human remains found by M. Boucher de Perthes, Prof. Schmerling and others in Europe, and the hip bone from Natchez in our own country, do not indicate a size greater than the present stature of men; and no evidence has yet been submitted to any competent authority, of such a character as to lead to the suspicion of a degeneration in man of the present day from the size of his forefathers.

"The gigantic skeleton of a man," mentioned by Clavijero as having been found in Lower California, was probably that of some pachydermatous animal, now extinct. Such mistakes have often occurred, even in persons as well informed as that author, who was not an anatomist, and who might readily have been deceived by a lot of disjointed bones.

Tradition of dwarfish or gigantic races of men existed among almost all semi-civilized and savage tribes, and should go for nothing in scientific investigations. Our author supplies us with one which has within itself the proof of its own valuelessness. The skeleton of a 'man,' reported by non-scientific observers, to have had eighty teeth in its skull, is open to very grave suspicion of *not* being a skeleton at all. In other words, it looks like a pure fabrication, inasmuch as none of the higher animals have even an approach to the above number of teeth.

Again, in Tuolumne Co. we have the thigh bone and skull of a man, of *twice the usual size*. Such important matters need the most careful authentication before they can be received as evidence. The separate items however, do not need individual consideration. All bones supposed to be human, as well as all remains of human art, found in the auriferous gravel of this coast should be preserved as priceless treasures. Careful notes should be taken on the spot *and at the time* of discovery, and the specimens with the notes should be forwarded to some competent scientific man, who is able to weigh the testimony and make proper use of the discovery.

Innumerable bones of mastodons, elephants, horse and smaller animals have been found in the gold bearing gravels of California; but as yet there is no proof that a single bone or tooth of man has been found in any deposit older than the historic period. If persons engaged in placer or hydraulic mining, were to pay the proper amount of attention, and carefully preserve every fragment of bone, it is very possible that California might, before long, furnish evidence of the habitation of the country during the age of the mammoth and the mastodon. o.

We shall soon give an Illustration of J. M. Parry's New Patent Cotton, Wool and Hay Press.

Correspondence.

[Written for the Mining and Scientific Press.]

Sonora—Tuolumne County.

BY OUR TRAVELING CORRESPONDENT.

There are few towns, if any, which in their early history obtained a more unenviable reputation than Sonora. It seemed as if the lawless and depraved of every nation on earth, and every State in the Union, collected there, with a mutual understanding, to carry out their nefarious and licentious practices; but, as the placer diggings gradually decreased, the means of indulgence decreased in exact ratio; and thus, here as elsewhere, a better condition of morals was inaugurated, which has been carefully fostered, until her citizens now will bear comparison with any people for sobriety, refinement, and social hospitality.

Sonora, as most everybody knows, is the chief town of Tuolumne county, and is quite a pretentious and important place, both as regards its present and its future. I do not think she has seen her best days by any means, if I am right in my estimate of the gold and copper mines in the neighborhood.—Washoe, it is true, has drained much of her population, yet, at the last general election, the precinct polled some 600 votes. She has a good Court House, two public schools, Protestant and Catholic, both largely attended, five churches, two fine hotels, two ably-conducted weeklies, with livery stables, stores and saloons, which would all do credit to a much larger town. Of the public buildings, the Episcopal church is decidedly the most creditable.

There always was, and still is, a large array of ability in Sonora; but, unfortunately, at present it is not harmonious, and much political and religious sectarianism prevails. The bar, the pulpit and the press are well represented here; the first and last boast names known throughout the State in their respective spheres—the other very soon will. Rev. Messrs. Chapin, of the Episcopal church, and Martin, Jr., of the Presbyterian, are both able, earnest preachers, and destined in time to make their mark.

The festivities of Christmas and New Years were observed here with all the gaieties of the season. As your representative, I have to acknowledge the marked courtesy paid to me by all parties, especially the Episcopalians and Masons. To the festival and ball of the one, and to the annual dinner and ball of the other, I had a cordial invitation, and spent a happy time with each. Before the Masons, in responding to the toast of the Press, and your journal in particular, I mounted my old "hobby," and, in spite of the mixed political bias, uttered a prayer for the eternal unbroken sovereignty of America. In Europe, under the *monarchial* system, a *multiplicity* of governments has been the degradation of man, by subordinating the interests of a continent to the trifling claims of petty princes. In South America, under the *republican* system, you find precisely the same thing. Not, then, for the negro, but the *white* man—for the brave, old sturdy Saxon, who has done so much for the world—I still hold fast to the eternal sovereignty of the American Union—the foundation and hope of his liberty and progress.

THE AURIFEROUS MINES OF SONORA.

It was only since my visit to Sonora that her people were aware of the existence of copper within the precincts of the town, of which I shall speak hereafter. At present, it is my object to speak of her auriferous quartz, with a view not so much to her immediate benefit as that of the whole country. I shall not, therefore, adopt the same regularity of system as with the copper mines, but simply give the name, character and location of such claims.

In the minds of the public, generally, a conviction has long been growing that Tuolumne county owns the best and most numerous quartz veins in the State. This fact, however, has never been realized in San Francisco, where it is most important it should be known, if this auriferous wealth is to be successfully developed. Let us see how the case stands, and whether this assumption is based on facts; and in giving these facts I wish it understood I speak reliably, as in my copper reports, from personal observations in some cases, and from authentic records in others. The first and most important is the

EXCELSIOR.

It contains 1,045 feet, situated 17 miles above Sonora, in Sugar Pine District. A single share in this claim could not be bought for $10,000. The company have a good 10-stamp mill. The income tax is assessed at $75,000. From the last six day's run, previous to my obtaining these notes, $24,000 were realized. There is certainly no claim in California, and very few in Nevada Territory, superior to the Excelsior. If, in uniformity and reliability of yield this mine was in Washoe, instead of within one day's pleasant ride from Stockton, each foot would bring $4,000.

GILSON MINE.

This mine is in the same district, a few miles nearer Sonora, with a good 10-stamp mill. The Gilson also has a high reputation, being known to pay well. I regret I had not an opportunity of accepting Mr. Gilson's invitation to visit him, as I should have gathered many important particulars.

SOULSBY VEIN.

I do not know whether I have the name of this claim down correctly. That, however, is as near as I can get at it, as written by the gentleman who furnished me with the particulars. Mr. D. Davidson, of San Francisco, is the principal or sole owner of this claim, and it has a high local reputation. It is 12 miles from Sonora, with a 20-stamp steam mill.

CONFIDENCE MILL.

This is 10 miles from Sonora, now working rock from the Comstock and Smith veins, and averaging from $60 to $150 per ton.

EUREKA.

This claim is situated at Summersville, the exact distance from Sonora I did not learn. It is a splendid vein, and makes a monthly dividend.

RIVERSIDE.

A rich vein, 12 miles from Sonora, with a 20-stamp water mill. I heard this mine spoken very highly of.

WARFIELD.

This is now known as the Gardner claim, situated 12 miles from Sonora, on the South Fork of the Tuolumne river, and about 7 miles from the celebrated Excelsior. The vein is from 3 to 6 feet thick, well defined, and stripped at intervals for 1,800 feet. The company are about closing a contract to put up a 15-stamp mill, to be completed in 90 days, with "Wheeler's Pans"—their first introduction in the county. Very high expectations are formed of this claim. Down the shaft 80 feet, abandoned for a tunnel on account of water, free gold can be seen in the rock from top to bottom. Running north from these mines to the tributaries of the Stanislaus river, within the precincts of Columbia—a very pretty town—the fruit-orchard of the county—are a number of others, well worthy of mention. The first on my list is the

SUMMIT PASS.

A party from San Francisco are now engaged here putting up a 15-stamp mill. The vein is reported to well opened and developed, and very promising.

JONES & WOODMAN.

A fine lead on the Stanislaus South Fork. Men are engaged in building machinery.

HUNTER VEIN.

Located 15 miles from Sonora, and I have since understood in that precinct, not Columbia. That point, however, is immaterial. The company run a 10-stamp water mill, and are working remarkably good rock.

YANKEE HILL.

A gold and silver claim. The rock assays at the rate of 80 oz. silver and 10 oz. gold to the ton; nor was this their best rock. A tunnel is now being run 150 feet to cut the vein 130 feet deep; from 20 to 30 feet more to run. Prospects good.

SHANGHAI.

A 5-stamp mill going up, with a vacant battery for 5 more when necessary. A strong copper lead runs contiguous to this lead, and shows in the tunnel.

COLUMBIA.

This is also gold and silver, and considered the most important in the section. Two assays, one by Kellogg & Co. and the other by Molitor, averaged nearly the same—42 oz. silver and some gold.

ARGENTUM.

Gold and silver. Tunnel 200 feet; about 100 feet more to run. Vein 2 feet thick; average assay, $160 to the ton. A 10-stamp mill is to be put up this season.

U. S. GRANT.

Gold vein; shaft 50 feet; vein well developed 3 feet thick; assays really large. A 10-stamp mill is to go up this season.

Such are the gold and silver mines in the northern part of the county, above Sonora and Columbia. The country in which these claims are located affords the best facilities for mining—a fine climate, easy of access, with plenty of water and an abundance of timber. There are many more in a less advanced state, which I shall leave unnoticed for the present, wishing to speak only of such as defy repudiation. We must now come below Sonora once more to Jamestown. Here also are several excellent gold mines, in fine working order and paying handsomely. These are on the great Mother Ledge, as it is termed, which runs through the entire State. It is on this mammoth ledge that the celebrated Fremont and Melones are situated.

APP'S MILL.

This mill is somewhat over a mile from the town, near the old "Wood's Crossing." The rock of this company has been paying well for years. During my stay in the neighborhood, 20 tons from a shaft considerably deeper than they have previously used, averaged $75 a ton. The machinery is, however, imperfect, and loses, as is now ascertained, at least one-half the gold. Mr. App has recently put one of Varney's Amalgamators in use. The first experiment on the *tailings*, paid at the rate of $30 a ton; the second, with an application of steam, paid $10 more. Now imagine $40 a ton being lost! How many leads in Washoe are there, like this, paying for years straight along from $50 to $120 a ton, and which, in all probability, will pay as well for years to come? The works are very complete. At the end of the tunnel, considerably over 100 feet from the surface, they have a good steam engine, and blacksmith shop complete. These are under the charge of Mr. Darrall.

HESLIP'S MILL.

This is located at Quartz Mountain, near my own old quarters in 1850. It runs 10 stamps; water power, with a 40-foot wheel. The rock averages from $15 to $30 a ton, and crushing easily, of course pays well. Mr. Heslip is very intelligent, as well as practical, and thoroughly posted in the quartz business. He is making great improvements in his mill, and uses Brevoort's pans for amalgamating, of which he speaks favorably. All this quartz is sulphuret rock, and the difficulty is the correct theory of amalgamating. I cannot too highly appreciate the friendship of this gentleman. We'll meet again, Heslip, I hope, and chant together the grand old Litany of our Church, "*Integer vitæ, celerisque purus.*" Well, never mind, old boy, I won't quote Latin to you; but this begins one of Horace's most beautiful odes, and whom than yourself, pray, better deserves the compliment?

MYERS & CO.'S MILL.

Situated on Wood's creek; water power; 10 stamps, with 40-foot wheel. The rock here is taken from the same main ledge, between the App and Heslip claims, and pays well. East of this ledge, probably a mile or more, is the

SHAMROCK COMPANY.

This is a newly-discovered vein, 2 feet thick. Out of 25 tons selected rock the company got $500. The average rock is put down at $40 a ton. Crossing back from here to the north side of the Jamestown, on the old main ledge, the first is the

PRESTON & GARRISON.

Their mill is not at work, and, I believe, the company contemplate erecting a new one. Judge Preston showed me the receipts of different assays. The first was $57 silver and $18 gold to the ton; the second (selected rock) ran up to $104 silver. Adjoining is the Harris and Dart, the Williams, and Reese claims, the last on the south side of Table Mountain. All these have rock, in the large vein, and small one running parallel, which yields from $10 to $200 per ton. Beyond the mountain, on the north side, is the

WILLIS & HODGES.

This company have a mill, but I do not know its capacity. Their rock is rich, and each member of

the company supposed to be in affluent circumstances.

These form, as near as I could learn, all the reliable and developed quartz mines of Tuolumne county in and about Sonora. In the same spirit in which some people say there is no copper west of Copperopolis, others say there are no mines in Tuolumne county worth a straw. I have already proved the fallacy of the former assertion; I believe I have now done the same for the latter. Will these veracious and well-informed persons give me a list of claims in Washoe, Reese River, Humboldt, Fort Mohave, Mexico, Idaho, Devil's Gate, Infernal Ridge, Diabolical Cañon, Fiends' Creek, or any other distant, or hifalutin-named place, 1,000 miles away, that, with the same imperfect mode of working, will pay the same amount of money from one year's end to another? They cannot do so. My word for it, Tuolumne county will soon vindicate herself in this matter; then men of large means, who are minus a few superfluous dollars, and especially men of limited means, who have spent *all* by this foolish mania of "bobbing 'round," will regret their spectacles were so dull that they could not see where the trump card lay, and how foolish it was to seek "over the hills and far away" the fortune or competency, as the case may be, which they had only to stretch out their hands and grasp *at home*.

Here, at Jamestown, all that is wanted to change the very face of things, is a good reliable 30 or 40-stamp mill, erected on this same "mother ledge." As far as I can ascertain, every ton of it, even the croppings, will pay $10, and, with the facility of getting the rock, that rate alone would give a splendid interest on the expenditure. I have understood that Donahue & Ryan, or some other monied firm, did make a proposal to certain parties to put up a 15-stamp mill for a half interest in the claim. The idea is good, but it does not go far enough. Instead of a 15-stamp mill, with a half-interest in *one* claim, let them double the size, and take a proportionate interest in *all* the claims. They can have half Whiskey Hill deeded them on these terms. As it is, the claims are of little or no use to their owners, simply because they have not capital to put up proper machinery. They can make a comfortable living now, and that's all. They know and feel it would be better for them to give half their claims away, because the other half, worked through a good mill, would give them a fortune, rather than to keep the whole comparatively useless as it is. If the parties below are serious in this matter, a negotiation such as I mention can be made very easily. I would advise them to see Judge Preston or Messrs. Harris & Co. Such an arrangement, if carried out, would be of immense importance to the county, and result in large profit to all concerned.

And now I must retrace my steps. It has taken me somewhat longer than I desired to get through; but I trust my labors will not in the end be found profitless either to your paper or to the great interests it represents. Here, as elsewhere, I am not conscious of having made a misrepresentation of any claim, good or bad. I am satisfied that in the day of her prosperity Tuolumne county will not forget the MINING PRESS. L. H.

THE DRAFT.—It appears from the report of the Provost-Marshal General, which has recently been submitted, that up to the 1st of November 50,000 men had been procured by the draft. The entire enrollment—seven States not included—amounts to 3,113,305 men. One-fifth of the number enrolled in the first class have been called upon. It has generally been supposed that the proportion of persons enrolled and subsequently exempted from the draft, in our own country, has been vastly larger than that generally observed in European countries. The Marshal shows, by the following statistics, that such is not the case. He says:

It appears from tables prepared by the Medical Inspector that the ratios of rejection for mental and physical infirmity in the United States, France and Great Britain, for the periods stated, were as follows:

	United States.		France.		Great Britain.	
	In 1863	From 1841 to '43	In 1859	From 1842 to '53	In 1860	In 1861
Ratio rejected per 1,000.....	319.1	324.4	317	335	318	451

EXPORT OF GOLD FROM VICTORIA.—From tables published in the Victoria *Chronicle*, it appears that since 1858 the amount of $10,200,184 of treasure has been exported to Europe and the United States. "This," says the *Chronicle*, "is through the ordinary banking channels, but our contribution to the general stock of precious metals in the world since 1858 has been double these figures—or upwards of $20,000,000.

Trip to the Mines---Mariposa.

CONTINUED.

OSO VALLEY, OR BEAR VALLEY, named, I suppose, after some grizzly monarch of the chapparal, is surrounded by the foot hills of the Sierras, and is in sight of their everlasting snow-capped summits. The valley is splendidly situated, and from the cursory glance which we took of the town we should judge that considerable busines must be transacted there. The Fremont company have a large fire-proof store in the centre of the town, and keep a full variety of goods. The hotel is well kept.

Mariposa is one of the richest counties on the Pacific coast, yet the very erroneous opinion is entertained, in California, as well as in the East, that the eight square leagues granted to Fremont has taken up the richest portion of the county. It is true that so great a monopoly as this, deadens much individual enterprise; but nevertheless, mineralogically speaking the richest portion of Mariposa is not included in this Fremont gobble.

A great belt of copper is stretched across the foothills of Mariposa county; more particularly in and around Hornitos, one meets even better indications than are generally seen in Calaveras county, and many a rood of auriferous ground remains unwashed for want of water, while the hills are white with quartz veins, and almost every stroke of the pick turns up the precious metal. To the miner and prospector we say that no better or richer field presents itself on the Pacific coast than Mariposa county.

THE TEMPERANCE CREEK COPPER MINE.

Is situated about six miles from Hornitos, in what is called the Chamisal. The company have a shaft about 45 feet deep, and have taken out some good shipping ore, ranging from 15 to 35 per cent. The ore carries with it black oxides. This mine promises well; work is suspended for the present, but should be again commenced, as no doubt the vein is a promising one.

FLOYD'S MINE.

This is a gold vein and is located near the Temperance Creek mine, and was formerly worked by Mexicans. It has a shaft down 80 feet and every foot shows quartz carrying gold. Many rich specimens have been taken out of this shaft and locked up; one of which was presented to us for our cabinet, and for which we desire to express thanks to Mr. Floyd.

Having now exhausted the time allotted to us, we returned to Hornitos to enjoy once more the hospitality of Mr. Hall, the landlord of the place, who does everything in his power to make the traveler happy. Although having suffered much from the loss, by fire, of his hotel, yet everything was done by him to make our stay pleasant. We hope the new house which he has commenced, and which is being rapidly pushed to completion, will prove "eminently successful and highly remunerative" to him.

To Dr. Kimball and Mr. Engle we desire to express our thanks for their attention and kindness, with a firm belief that Hornitos will soon arise from her ashes, like a Phoenix, and become more populous than some of her present rivals nearer the bay.

A NEW ROUTE TO WALKER'S DIGGINGS.—On the third of January, an expedition, headed by Mr. Herman Erenberg, returned to La Paz, having accomplished, to their perfect satisfaction, their object, viz, the finding of a shorter and better road to Weaver and Walker mines. They have found a good road, 80 miles shorter than the one heretofore traveled, with plenty of water and grass. This will make the route by La Paz superior to any other.

ON account of the great weight at the centre of our ironclads, it has been found dangerous to draw them up on ordinary "shipways" for purposes of repairs. Under these circumstances, Admiral Dahlgren has hit upon the expedient of beaching said vessels at high tide, when the bottoms are to be cleaned. One end is first beached and then the other. It is stated that the plan works well.

[Written for the Mining and Scientific Press.]

From Arizona.

MINERALPORT, Arizona, Jan. 3, 1864.

One year has wrought many changes in this part of the world. A little more than twelve months ago attention was directed hitherward by the swarm of gold-hunters—a motley crew of Mexicans and white men—who passed up the Colorado, skimming its banks for gold; and now we find them far out upon the verge of the wildest country, on the threshold of a district only known as the home of the Apache and the theme of golden stories, beyond whose prescribed limits a few hunters and trappers have ventured, who tell of strange old ruins and beautiful valleys and curious mountains. Although the Spring months are expected to develop to the waiting miners a rich harvest of gold, both in Wenver and Walker Diggings, an expedition is on foot, to be thoroughly organized for starting, in April next, for the

WHITE MOUNTAIN,

So called from the numerous quartz veins it contains. From its elevation flows the San Francisco, Salt, Blue, Black, and other streams, which empty into the Gila, all of which are gold-bearing, and it is not improbable that the next great gold-field of the world will be found in that region. The expedition will go at least one hundred strong, under the guidance of the veteran old hunters, Capts. Walker and Porter. There has been an impression that the San Francisco Mountain country was the great center of the gold region of Arizona, but the report of Lieut. Ives is unfavorable to it as being a gold country at all—the mountain itself being a volcano of recent date. The White Mountain is situated, as near as we can judge, between the San Francisco Mountain and the Gila river, between three and four hundred miles easterly from this point.

QUARTZ MINING.

A year has witnessed the mutations from the feverish excitement caused by new discoveries of rich quartz veins, to the race after capital for their development—the ordeal of humbug—and finally to sober, earnest mining, which, for many reasons has fallen far short of the first ardent expectations. It's all fair sailing until the rough mountains are attacked. Many things have militated against the quartz mining—the failure of the steamboat company to bring up the supplies shipped by way of the river, and the general failure of companies to furnish sufficient capital to commence work. A few hundred dollars and a thousand sacks was the equipment for a superintendent, and the next vessel was expected to bring back the sacks, full of rich mineral. That these expectations have generally met with disappointment is not to be wondered at; still, throughout the several districts from Pecacho to El Dorado Cañon, work is being carried on. In this district (Weaver), a few companies have worked with vigor and success, developing to their satisfaction true veins of copper ore. One company has already taken out enough ore to more than pay the expense of the extensive prospecting, and I do not mention it as an exception, but merely to show that the extravagant expectations before mentioned, have, and may be again realized—but not as a rule. Some men who have visited this country, from prejudice or ignorance, have essayed to scientifically condemn one district and exalt another. The simple truth is, they are all, geologically, "in the same boat." All the veins discovered may not turn out "true veins," but one or two leads in every district will controvert the sweeping, partial judgment passed by some would-be wise men.

NOW AND THEN.

Less than a year ago, Messrs. Editors, your correspondent passed, for the first time, over the road from San Bernardino to La Paz. One or two pioneers had ventured to pass over the desert sands with wagons, thinking it a great feat, and at no watering place was there a station kept—the small pox had driven off the Indians, and the desert was left to solitude. Now a weekly stage runs over the road, and at every watering place there is a station, a grocery, and accommodations for man and beast, and the road is lined with heavy teams, freighting out goods. The season has been a perfect harvest to teamsters. N.

[Written for the Mining and Scientific Press.]

MINING GOSSIP.

EDITED BY FRANK WARDELL.

[In this department of the Mining and Scientific Press we propose to give various and brief accounts of mining companies, and shall, under all circumstances, write *plainly* respecting their merits and de-merits; furthermore, we shall bring to light such transactions as may come within our knowledge regarding the "Bulling and Bearing" system and the "underground" actions of both Trustees and Brokers. We are vain enough to suppose, at all events, that we have the "inside track," and shall, without *hesitancy or fear*, give to the public, from time to time, a peep behind the scenes whenever the occasion justifies. If, in doing so, at any time we have fallen in error as to our report, and it can be so proven, nothing will afford us more pleasure than to make the "*amende honorable*" by correcting the same. We shall feel under obligations to those who are interested in stock if they will communicate to us such items as may come under their observations, and which will prove interesting to our readers. This department is open for free discussion to "one and all." Our object is to render justice to every one. Communications, in all cases, must contain the author's name and address to insure publication, which will be kept *strictly confidential*—otherwise no notice will be taken of them.]

In the commencement of our task we emphatically state, as we have heretofore in the notice which heads this department, that it is not our intention to "sound the trumpet" for mining companies, prospecting agents, or mining officials, without they merit the same and we are assured of the fact; but, so far as our power of perception and acting goes, we desire to become the guide and adviser to shareholders, whether actual or for a time in "embryo;" to bring together as much good and sound material as we can collect, for the judgment and use of sensible and prudent people; and to warn the minds of the unreflecting and excitable against the design of plotting knaves.

Stock Exchange.—This new "stock board" will commence operations on or about the 1st of February. We are informed that over two hundred have already become members, and that the prospects of this exceedingly hazardous undertaking now looks favorable. It is the intention of the Superintendent, Mr. Thomas Wallace, to inaugurate the opening with a champagne lunch, when a larger attendance may be expected, without a doubt, (if never afterwards). However, with careful management, we would not be surprised if the new open-board system should prove popular and profitable to its enterprising projectors.

Pacific Board of Brokers.—Upon invitation, we visited the rooms of the above Board, which are located on Washington street, near Montgomery, (opposite to where the old Board formerly held their meetings), and we must candidly admit that we were very much surprised to find such a fine room and so beautifully finished, containing as it does every requisite to make the members comfortable. Their roll is now full, having completed their number a few days since. They now number one hundred and fifty members, among whom we noticed many members of the first Board, and a large share of our leading and influential merchants and brokers. The officers of the Board are: W. P. Deuckla, President; W. P. Dewey, Vice President; and James H. Gager, Secretary.

Copper.—In front of Henry Schmiedell's office, No. 705 Montgomery street, there has been on exhibition during the past week a beautiful specimen of copper, weighing 150 pounds, and assaying over 70 per cent. copper. There are, we learn, several hundred sacks in port, brought here upon the ship General Jessup, which will average 60 per cent. copper, to say nothing of the silver it contains. It was taken from the Mountaineer copper mines, located at William's Fork District, Arizona Territory, 50 miles from La Paz, and only half a mile from the Colorado river. This copper ore, if shipped to England, would realize, at the least calculation, from $250 to $300 per ton.

Information Wanted.—Why is it, one would most respectfully ask that the tunnel of the Challar G. & S. M. C. is closed up (if we have been correctly informed) to visitors? Is it on account of its vast richness, and thus, they do not desire outsiders to discover it too quick, or, has this once famous mine given out and has this been the cause for the depression in the stock market of late? We pause for a reply.

Fashionable Mining Item.—On the evening of the 28th inst., a certain very exteasive holder in the Ophir Mining Co. gave away his amiable daughter to a well-known physician of this city. The wedding and reception took place at their magnificent residence on Folsom street, and was largely attended by the representatives of Gould & Curry, Savage, Ophir, and other leading mines; the *creme de la creme* of our fashionable society were also present. We poor editors may justly exclaim, "Oh! for (Ophir) a home in some vast wilderness"—of a similar nature.

Burning Moscow G. and S. M. Co.—This company, we learn, held a *private* meeting of its Trustees on Wednesday morning, Jan. 27th. Among other things that were brought before the meeting, was the importance of a reduction in the expenses of the company. The other plans that were adopted we withold for the present; however we will say that if carried out it will place this favorite company back again in its old position among the leading $300 or $400 stocks. We predict another excitement in this stock ere long.

Real del Monte.—As there are so many reasons assigned for the fluctuations in this stock, we, with pleasure, especially to those interested, lay before our readers the following statement, which we consider as *reliable*. It comes from a gentleman who arrived here a few days ago, and who has not the value of one dollar's investment in the stock. He says that the Real del Monte Co. have over 2,000 tons of exceedingly rich rock already out; they are down 140 feet, on an incline ledge, and the deeper they go the richer the rock becomes. All the mills in the vicinity are working night and day on this rock, and everything looks very favorable. He attributes the fall of the stock simply to the bulling and bearing system of our brokers, and further remarks that, when all the rock they have out is crushed, it will cause a rise in the stock, and place it in its right position before the public.

Shame! Shame!!—Professor Whitney gave a lecture on Thursday evening, January 29th, the subject was "Mining, in its Relation to Progress and Civilization." The lecture was one of the Professor's most brilliant efforts, and we were sorry to see such a limited attendance present. To think, that in a mining community like ours, that a deeper interest is not felt, only illustrates to us the sequel, why so many people are constantly being "duped" by "wild cat" schemes. If the country would only enter more fully into the theory of mining, there would not be one half the cause of complaint which we are constantly hearing about "promising mines."

"***" We acknowledge the recipt of a very interesting letter from our correspondent in Esmeralda—which we will publish in our next issue. We are compelled to defer it on account of the pressure on our columns this week.

Washoe Stock and Exchange Board.

Virginia District.—We quote since our last issue: Burning Moscow, $105 bid; 118 asked. Birdsall, 16 bid; 22 asked. Bajazette and Era, 25 bid; 40 asked. El Dorado, 30 bid; 55 asked. Iowa, 100 asked. Kenosha, 6 asked. Milton sold at 35. Moss, 12.50 bid. Osceola, 5 bid; 15 asked. Orleans Flat, 8 bid. Spanish No. 2, 50 asked. Seneca, 10 bid; 15 asked. Sutro sold at 4.75. Sierra Nevada, $90 asked. Utah, 150 asked. Virginia Express, 150 bid. Phœnix, 15 asked. Sacramento and Meredith, 70 asked. Allea. 40 asked. Belvidere, 4 bid; 10 asked. Virginia Hill, 4 asked. Marlette, 5 bid; 5 asked. Mount Davidson, 8 asked. New Orleans, 8 asked. Pride of Washoe, 7 asked. Cincinnati, 12 asked. Lacross, 30 asked. Oakland, 5 asked. Poorman, 100 asked. Pioneer, 8 asked. Savage, 3,100 bid. Beach & Paxtoa, 70 bid; 120 asked. Cedar Hill tunnel, 2 bid; 8 asked. Honduras, 12 asked. United States, 4 asked.

Gold Hill District.—Alpha, $900 bid; 1,050 asked. Belcher, 1,250 asked. Bullion, 56 bid; 72 asked. Baltic, 1 foot sold at 160 and 4 feet at 164. Bell Vernon, 8 asked. Crœsus, 3 feet sold at 60. Cherokee, 2 bid; 4 asked. Crescent, 3 bid; 7 asked. Cincinnati, 4 bid, Crowa Point Ravine, 10 feet sold at 15. Coppers, 5 bid. Diligeat, 3 bid. Frankell, 2 bid. Goldeu Swaa, 25 bid; 40 asked. Goldea Horn, 20 feet sold at 7. Gilmore, 6 bid; 18 asked. Globe, 8.50 bid; 14 asked. Golden City, 100 feet sold at 4. Golden State, 3 bid; 10 asked. Original Hawkeye, 43 bid; 50 asked. Justice, 85 bid; 130 asked. John A. Logaa, 5.50 bid; 20 asked. Jenny Liad, 6 bid; 22 asked. Keatucky, 4 bid; 7.50 asked. Knickerbocker, 5 feet sold at 27.50. Leon, 20 asked. Louisville, 4 bid; 25 asked. Mary Aan, 60 bid; 80 asked. North American, 85 bid; 100 asked. New Orleans, 5 feet sold at 15. Napoleon, 100 feet sold at 11. Nevada, 16 bid; 20 asked. Oaeoto, 20 asked. Pontiac, 5 bid; 10 asked. Rock Island, 10 feet sold at 15.50. South Americaa, 20 bid—buyer 30 days. Tontine, 18 bid; 25 asked. United American, 20 feet sold at 8.50. Vesuvius, 5 bid; 10 asked. Victor Hugo No. 2, 10 asked. Vulcan, 100 feet sold at 3.50. South Midas, 2 bid. Sam Patch, 15 asked. Grizzly, 15 feet sold at 5. Silver Veil, 3.50 bid. Christo Consolidated, 4 bid; 20 asked. Miantonoma, 6 bid. Uncle Sam, Senior, 12.50 bid. Pilot, 10 asked. Victor Hugo, 5 bid. Arizoaa, 15 asked. Baltimore-American, 36 bid. Caledonia Tunael, 38 asked. Colorado, 5 bid. Excelsior, 15 bid. Grant, 5 asked, Hawkeye, 20 bid; 35 asked. Jewett & Sheppard, 8 asked. Keystone, 16 bid; 35 asked. Michigan, 45 asked. New Oregon, 13 bid; 15 asked. Narragaaset, 15 asked. Robinson, 20 asked. SALES OF THE WEEK.

Virginia District.—13 shares Milton at $35. 10 shares Sutro at 4.75. 10 shares Marlette at 5. 10 shares Sutro at 3.75. 10 shares North Ophir at 8.

Gold Hill District.—1 share Baltic at $160; 4 shares ditto at 164. 3 shares Crœsus at 60. 10 shares Crown Point Ravine at 15. 20 shares Golden Horn at 7. 100 shares Golden City at 4. 5 shares Knickerbocker at 27.50. 5 shares New Oregon at 15. 100 shares Napoleon at 11. 10 shares Rock Island at 15. 20 shares United American at 8.50. 100 shares Vulcan at 3.50. 15 shares Grizzly at 5. 50 shares Goldea Horn at 7.50. 25 shares Napoleon at 7, 20 shares Oneoto at 15. 35 shares Rock Island at 15. 10 shares Tontine at 16. 13 shares Union at 13, 20 shares Cherokee at 3. 5 shares Justice at 100. 12 shares Rock Isand at 12.

Flowery Distrıct—10 shares Yankee Jims at $1.

Washoe Stock Board—Special Election.—The office of President of the Washoe Stock and Exchange Board having been left vacant by the resignation of R. M. Daggett, R. W. Billet, the former Vice President, was elected in his stead, and W. O. Smith, who has been acting as Secretary for some time in the absence of Mr. John McCarty, was elected Vice President, to fill the vacancy left by Mr. Billet. Mr. McCarty, the regular Secretary, having returned from this city, has again entered upon the duties of his office.

[Written for the Mining and Scientific Press.]

Humboldt County--Nevada Territory.

The daily journals of this city are devoting a good deal of attention to the mines in Humboldt county, Nevada Territory. That so little concerning them has been published heretofore, is due simply to the fact that the inhabitants of Humboldt are not a letter-writing people, and that the expense of sending "special correspondents" to that region is very great—even if reports, based upon such superficial examinations as they would be enabled to make, could be relied upon. It is very common for practical miners to underrate their own capacity to write for newspapers. Men who are fluent and accurate in private correspondence, have a morbid fear of making themselves ridiculous in print. Of course this is extremely absurd, and also injurious, as it tends to retard the development of some of the best of our mining districts. The character of the early population of a mineral region is, as things go in these days, merely a matter of accident. Reese River happened to be settled to a great extent by men from San Francisco, acting, generally, as the agents of capitalists, who not only possessed money and energy, but combination and influence—and, consequently, the world knows all about Reese River. Humboldt happened to be settled by persons from the upper counties of the State—intelligent and energetic enough, but operating for themselves, with little money, and without concert of action—and, consequently, an almost Egyptian darkness has reigned over Humboldt. So profound has been the ignorance concerning it, that respectable men, whose notes are good in the market, and who are doubling their fortunes by stock investments, have to scratch their heads two or three times before they remember that hundreds of miles of mountain and plain separate Humboldt county in Nevada Territory from the county of the same name in California.

We would not have been so profuse on this point, but for our anxiety to stimulate the inhabitants of Humboldt themselves to distribute the facts about their mines. Their local paper must necessarily depend, to a great extent, for its interest upon their contributions, and on the western slope of the Sierra Nevada, we have to rely upon them altogether. We will gladly make the Mining and Scientific Press the medium of circulating any information which may be supplied to us under the authority of any honest man's name.

Facts are not only "stubborn things," but they have an element of active life in them, which cannot always be repressed even by the dead-weight of intellectual inactivity. This is the fortunate circumstance to which Humboldt is indebted for the present direction of public attention to its resources and to its wants. That county extends for about two hundred miles from its north-western to its south-eastern extremities, and for an equal distance from its extreme north-eastern point to its south-western termination. It contains nearly 30 mineral districts, and a multitude of large, well-defined veins, rich in all the various forms of silver ore, and, with two or three exceptions, displaying the simplest and most tractable combinations. It possesses a population of about thirty-five hundred, mostly concentrated to the south and east of the Humboldt river, within a longitudinal limit of thirty miles, on two mountain ranges running in a general way north and south, and the northern ends of which terminate within a few miles of the river. On these ranges there is a considerable growth of stunted cedar and nut pine, sufficient, on the eastern range, to last for steam purposes for ten or fifteen years. Star creek and Buena Vista creek furnish water power, and the Humboldt canal, sixty-six miles in its projected length, of an average width of fifteen feet, and from two to four feet deep, of which more than ten miles are already completed, and which will be finished this year, will supply 45 quartz and grist mills with the means of crushing rock and grinding grain. The mountain cañons, the banks of the river, and the verdurous soil in Pueblo District, now produce the finest of vegetables, and will soon yield a large part of the cereals required for consumption in Humboldt and at Reese River, while the sides of the hills are covered with the most nutritious grasses. The taxable property of the county was assessed last year at more than half a million of dollars, and it will be remembered that the assessment was necessarily imperfect, and that nothing but "improvements" are liable to taxation. In the west range there are three towns—Unionville, Star City and Humboldt City—having an aggregate population of about one thousand, and in the east range, on one of the easiest of mountain passes, is the town of Dunglen, the result of a few months' development, and containing about 200 inhabitants. Buildings are large and substantial; stores filled to the roofs; there are school-houses and places of public worship, and society is as regularly organized as in the mining towns of California. There are two small mills in the west range and one in the east range; and from Fall's mill, in Unionville, especially, many bars of silver, representing many mines in the various surrounding districts in both ranges, have been received here during the last few months—the yield of ore—mostly from near the surface—varying from $125 to $400 to the ton. Work is going on now briskly and systematically in every direction.

This is a brief general statement of what Humboldt is, ascertained by personal residence and investigation. But that region can show something more than mere surface developments. The lode recently uncovered in the tunnel of the Tullulah Mining Company, three hundred feet from its mouth, and two hundred from the surface of the ground, is probably the best defined, the deepest, and the richest vein of mineral ever discovered in any of the outlying districts in Nevada Territory, and establishes beyond question the permanence and the value of the mines in Sierra district. The Neptune Hill, about two miles from Dunglen, on which the claim of that company is situated, is covered with rich croppings and float rock, traceable for a long distance through the extensions, and the fact may now be regarded as settled that, in its depths, are enormous masses of mineral which will yield more than two hundred dollars to the ton. We have spoken thus of the Tallulah because it is a representative mine, but Sierra district is full of mines, and possesses rare facilities for working them. The Auld Lang Syne, the Gem of the Sierra and its Oro Fino neighbor, the Natchez, the Great Western, the Humboldt, the Eclipse, the Independence, owned by the Great Basin Mining Company, the Maremne, the Champion, the Mourne, the Valley, the Badger, the Atlantic, the Pluton, and numerous other ledges, are each worthy of a minute description, but our space is limited and we must content ourselves with this general reference. Wood, worth in Virginia sixteen dollars per cord, is delivered at the Auld Lang Syne Mill at six dollars and a half per cord, and no ores in Sierra will have to be transported more than from eight to ten miles for reduction—generally too on a descending grade. The Tallulah claim is within three or four miles, at the farthest, of the Humboldt canal.

The Sheba mine, near Star City, contains antimony, bismuth and zinc in considerable quantities, and, in this respect, is a singular exception among the Humboldt mines—but, as some one has well said, it is "rich beyond the dreams of avarice." Systematically opened and admirably managed, displaying a great breadth of mineral, and in the best possible condition for extensive operations, nothing but the perversity of unscrupulous speculators can prevent it from being ranked with the most favored mines at Virginia. Speaking of this range, we may observe that a tunnel, eight feet square is being run from Humboldt City through Star Mountain, a distance of more than two miles, which is expected to tap forty-seven ledges, some of them at a depth of over two thousand feet.

In Buena Vista district, the Manitowoc, the Logan, the Anderson, the Monitor, and numerous other veins, deserve attention, and we could wish to describe minutely, the Moonlight in Indian district, the Great Republic in Cinnabar district, the D. C. Broderick, Chloride, Medora, Scottish Chief, Rattlesnake and St. Mary's in Echo district, the Cuba in Humboldt district, and the Little Giant and Magna Charta in Santa Clara District, but time and space will not permit, and we must trust to future opportunities, and to the intelligent co-operation of the people of Humboldt. We hope sufficient has been said to show that, as a field for enterprise and labor, that region is not inferior to any county east or west of the Sierra Nevada. The preparations which are in progress to establish additional stage lines, and to secure telegraphic communication with California indicate, at all events, that those who have the best opportunity of judging correctly, anticipate a large immigration to Humboldt this Spring. Syphon.

Advertisements for the Press should be handed in during the first of the week.

[For the Mining and Scientific Press.]

Importance to the California Miner of a Knowledge of Mineralogy.

Upon an inquiry into the infinite variety of objects surrounding us in the natural world, it would appear that three assemblages are to be discriminated. These divisions comprise the mineral kingdom and the vegetable kingdoms, characterized by organic structure and the wonderous phenomena of life. The inorganic or mineral kingdom in which we cannot detect any traces of organic structure, but which, nevertheless, forms the greater proportion of our planet—this assemblage of objects has been generally understood to form the province of Mineralogy.

Mineralogy has for its objects the consideration of the natural inorganic material of our globe, fluid and solid—the physical phenomena which they present, their chemical constitution, their modes of occurrence, the methods by which they are distinguishable from each other, their classification, and the uses to which they may be made subservient.

The character of minerals is dependent partly on their form, partly on their chemical, and partly on their physical properties.

It is important to insist on the definition and objects of mineralogy; as many scientific men assert that it is a mere department of chemistry, besides it is frequently confounded with geology or metallurgy.

A miner may be a good chemist but it would not make amends for an ignorance of mineralogy. If he were obliged to make an analysis each time he required to know the nature of a substance, it would occupy most of his time in labors often repeated, and in many cases fruitless. If after analyzing the same substance twice he is able to recognize it by some less laborious task, we say that he has acquired a mineralogical knowledge of that substance. So that the methods of mineralogy are those which a man must employ, if in relation to the natural inorganic bodies he wishes to reap the advantages offered him by previous investigations. Who, for instance, would not prefer to determine the nature of a brilliant gem by the method of mineralogy, instead of submitting it to the chemist, who, with sundry acids, would destroy its substance ere he could pronounce upon its character.

When visiting the celebrated Diamond washings, at Abaite, Brazil, the writer was shown the fragments of what had been a diamond of great value, but which the finder, in a rude attempt to prove its hardness, had struck with a hammer, and broken into numberless small pieces; his want of mineralogical knowledge lost him an immense fortune.

The grand interest attached to our studies of the products of the earth is to be found in the fact that the mineral properties of different lands, in conjunction with geographical features, have determined the distribution, the physical and social character, and the well being of the various races of man. Whether we examine the vestiges left by the people of antiquity, or study the modifications produced in branches of the same race, located in regions of different aspect, or inquire into the origin of the chief seats of modern civilization, we shall be assured that most of these phenomena are dependent immediately, or through the medium of vegetation, on mineral produce, and the particular conditions under which it can be made available to human convenience. *

Steamers for the East.—The steamship America, of the Opposition Line, and the St. Louis, of the P. M. S. S. Company will leave for Panama on the 3d of February next, and the competition between the lines promises to be lively in the meantime. The prices of the tickets by the *America* are as follows: First cabin, upper deck, after saloon, state rooms, $175: do. do., forward saloon, $135; second cabin state rooms, $100; do. do., open berths, $80; steerage, $50. By the *St. Louis:* First cabin, outside state-rooms, $162.50; do. inside state-rooms, $136; second cabin, $80; Steerage, $54.

[For the Mining and Scientific Press.]

THE MINERS' LABORATORY.

Assaying Copper Ores.

It is of great importance that every copper prospector should be acquainted with the best method for ascertaining the percentage of copper, in copper ores. Indeed it is our impression that every copper mine should be provided with a small laboratory for testing their ores, particularly when we know that such a laboratory could be fitted up at a cost not exceeding $200, with a further expense of only about 50 cents upon each assay for chemicals, etc. By following this, companies would save themselves much anxiety about their minerals, instead of having a hypothetical value for the time being. So soon as a mineral is discovered they would he able to ascertain its value, instead of nursing it in their pockets, talking about its merits, of which they know nothing, until at last they actually believe it to be extraordinarily rich; and when they come to San Francisco it is tested perhaps by some of our assayers and a return made of "no copper," or perhaps only a slight trace of one or two per cent. At this they are greatly disapointed; the assayer must surely have committed a blunder, and ere they are satisfied, perhaps the rock will have to traveled the whole round of our offices. All this will cost a considerable sum.

We will now describe the apparatus necesary:—First, a small balance that will carry about 500 grains in each pan, and turn distinctly with one-fiftieth part of a grain. Six small flat bottomed glass flasks, to hold from four to six ounces; two nests of beakers, the largest to hold about six ounces; six four-ounce glass funnels; a filtering stand to hold about four filters at a time; six half-ounce glass porcelain crucibles; two glass wash bottles to wash filterers and precipitates; a package of filtering paper; an iron pestle and mortar; a sieve about 100 holes to the inch; a common stove to boil your solutions upon; a bottle of hydrocloric acid; a bottle of nitric acid and several strips of good sheet iron, cut up into small pieces about one inch square.

HOW TO ASSAY SULPHURETS OF COPPER NOT CONTAINING ARSENIC, ANTIMONY, MERCURY OR BISMUTH.

We will now suppose a miner has a copper ore for assay. In the first place pulverize the ore; roughly at first, if the sample he large; after so doing, mix it well; spread it on a clean floor, take a little from all parts, mix well what you so obtain, and pulverize very fine, so that the whole will pass through your sieve of the fineness above described; mix well again, spread on a paper and weigh out very carefully in your balance, 25 grains of the ore, taking a little, to make up your weight, from different parts of your fine ore. Place the weighed ore carefully in one of your small glass bottles; add to it about one-quarter of an ounce of nitric acid, and then a few drops of hydrochloric acid; place your flask on your stove; it would be better if you would cover your stove with about one-half inch depth of fine sand, and place the bottle on this, keeping up a slow and steady fire. Allow your bottle containing the sifted ore and the acid to remain on the stove, boiling slowly, until you perceive small yellow globules swimming on the surface of the liquid. Should you observe that the solution is nearly evaporated, before the yellow globules appear, add a few drops more of nitric acid. Evaporate to dryness, heat the dried mass slowly, and allow to cool very gradually. Remove your flask from the stove; allow it to cool perfectly; then add a few drops of hydrochlorie acid; just sufficient to moisten the whole; allow it to stand for about one-half hour; then add a few more drops of hydroebloric acid, heat slowly; add hot water to the amount of two ounces; remove the bottle and liquid from the stove, and filter the solution; add hot water, in small portions at a time, on your filter, after the copper solution has gone through, until neither the water will taste acid; nor the paper in the funnel. After having done this take one of the strips of sheet iron and clean the same with a file or sand paper until it is perfectly bright; when this is done place the bright strip of iron in your filtered copper solution; then place the whole on the sand, on your stove; heat gently but not to boiling. The copper will by this method deposit itself in the shape of metallic copper on the iron, but may easily be removed. When your liquid appears almost white, take a bright piece of iron with your fingers and dip one end of it in the solution; if it does not become colored to the slightest extent with copper, the whole of that metal has been precipitated. If such is the case remove the beaker containing the copper from the stove; mix your solution with a small feather—a feather from the wing of a duck. Any copper that may adhere to the iron must be removed by means of the feather. Allow the liquid to stand for a few moments, tap the glass slightly against the table, in order to collect all the copper into one part of the glass; decant the liqnid now from the metallic copper; add more hot water, shake up by means of your feather; allow precipitate to subside; then pour off water again; continue adding water and decant until the water will not taste acid; when this is done remove your copper by means of your wash bottle to one of the small porcelain crucibles. Allow the copper time to subside; pour off the water, and dry the copper; then cut a hole in the lid of your teakettle, as a convenient way, say one inch in diameter, place the crucible containing the copper in this hole; boil the beaker in the teakettle, and the steam thus generated will dry your metallic copper. It is important, bear in mind, that you should not beat this precipitated metallic copper above the boiling point of water, if you do your result will not be accurate. When you think it is dry, remove the crucible and allow it to remain at rest in a hot place for a few moments, but not in a hotter place than the boiling point of water. The object of this last drying is to remove any condensed steam that may remain on your crucible. After drying this, weigh the crucible and metallic copper together; note the weight, place the crucible again as at first, on the teakettle and keep it boiling for a few moments; remove the crucible as before, and dry it; reweigh; if it weighs the same as at first, all right; if not dry again, and so on until you obtain two weighings precisely the same. When you obtain this, throw your copper away and weigh the crucible; deduct the weight of the crucible from that of the crucible and metallic copper, and multiply the remainder by four, and the product will he the percentage of copper, in the ore examined.

Take, for example 25 grains of ore:—

Weight of crucible and substance	486.42 grains.
Weight of crucible alone	480.22 "
Weight of metallic copper	6,20 "

Thus you have 6.20 grains of copper in 25 grains of ore. Then to obtain the percentage:—

25 : 100 :: 6.20 : 24.80 per cent. copper,
or, 6.20 x 4 = 24.80 per cent. copper.

When carbonate or oxide of copper, not containing any sulphurets of copper, has to be assayed for copper, the process is a little simpler. We pulverize the ore as at first; but instead of using nitric and hydrochloric acid, we simply use hydrochloric. Keep the ore at a boiling point; dilute, when all action has ceased, with hot water, and filter, without evaporation, and precipitate as before by means of a bright piece of iron. With the exception of the above operation, the whole is done precisely as the method already discribed.

We shall in future numbers give the method to be employed for assaying all the various descriptions of copper and silver ores. *

Oregon Iron.—The editor of the Oregon *Democrat* has been shown two butcher knives, made by Albany blacksmiths, from the ore of the Tualatin iron mines. Iron is said to exist in that locality in abundance. A forge has been erected, and is now in operation, and the construction of a rolling mill and other machinery for the manufacture of iron from the ore, is in contemplation.

A Reese River Mansion.

Dear reader, if you are the owner of numerous feet in the rich land of silver, be not startled by the above caption, through fear that some lucky wight has stolen the march, and reared, previous to you, a substantial castle upon some of the magnificent "Hights of San Francisco," but read with candor of the sublime abode occupied by one of the best and happiest of God's noblemen—an ex-typo and practical operator in Reese River mines. The extract here given is from a private letter, and was never intended to meet the "vulgar gaze" of the public:—"I went to work putting up a country residence for myself, in which I am now living, as happy and independent as an Irish lord. The style of architecture adopted is a sort of cross between the Arabic and Hibernian—the roof being formed from a tent, and the walls being made by digging a hole in the banks and leaving the sides three or four feet high, on the top of which partial walls have been laid with stones, capped with logs, to which the canvas is nailed. The rear wall is nothing but a bank of earth, and the front of the house is formed of poles, standing on end and sunk into the ground about a foot. The furniture is luxurious, and as my dining-room, kitchen, parlor, library and bed-room are all furnished alike, a description of one will answer for all. The door, facing the east, is closed by a hanging blanket. As you enter the door, to your right is my couch, spread with Oriental magnificence, composed of four uprights, four horizontal pieces, two large gunny sacks, a mattrass composed of a donkey's breakfast, two pair of heavy Mission blankets, and a pair and a half of lighter ones. In the corner, beyond the bed, stands a sack of sugar, and a large box containing sundry articles of food. South of these and ranged against the wall, stands the water bucket, tea-pot, coffee kettle, pots, etc. and in the south-west corner stands my stove—used alternately for cooking and warming. Strung up over head are hams and bacon, and under the couch are flour, beans, *etc.*, in profusion.

The "New Chemical Agent in Warfare."

An item has been going the rounds of the papers for some weeks to the effect that an English chemist proposes to carry up in balloons, a quantity of "chloride of nitrogen" and drop the same into an enemy's city or camp. So powerful is this terrible compound that two or three carboys of it dropped into a city or fortress, it is thought, would completely destroy the same, its inhabitants as well as its defences. Even if such terrible destruction should result, of which there are, at least, grave doubts, it may not have occurred to the ingenious projector that to carry out his project would require the absolute sacrifice of each individual aeronaut connected with the enterprise. A detonation sufficient to accomplish such a sudden and wide spread ruin, would prove sure destruction to the frail aerial vessel and its occupants.

An ordinary four or six pounder even, discharged at any point nearly over which a balloon is passing, produces a most fearful effect upon the machine. We recollect well, some twenty-five years ago, when ballooning was first attempted from Boston Common, that on the first ascension a complimentary salute was fired from a couple of four pounders. On the second ascent it was especially requested that the salute should be dispensed with, in consequence of the extremely unpleasant, if not dangerous effects produced by the detonation. If danger was apprehended from such a slight concussion, what must be expected from an explosion so terrific as to destroy an entire city? Perhaps, however, patriots could be found who would be willing to sacrifice themselves for so important an advantage to their country. Men can be readily found who will rush eagerly upon a battery when the chances of escape are not more than one in twenty or thirty, but few, we apprehend, can be found who would walk deliberately and without the excitement of battle or "the charge" to meet an inevitable death, and that so terrible as would attend the catastrophe we are supposing.

Copper-Coating Boiler and Other Iron Plates.

It is well known that much difficulty in the wear of steam boilers arises from a rapid corrosion of the plates in the immediate locality of the seams and rivets. An English mechanic recently took out a patent for protecting iron boiler plates at the exposed points by covering them with plates of copper. On subjecting his invention to a practical trial, the remedy was found to be worse than the disease, inasmuch as a galvanic action was engendered, of such power as to render the plates worthless in a much shorter time than would be the case if the same boiler was made in the ordinary way.

A similar trouble has been encountered in employing copper in connection with iron-plated ships; and the same difficulty with regard to corrosion at the joints, is also found to obtain in our iron-clads. A proposition has been suggested to obviate this difficulty in the case of iron-plated ships, by coating them with copper, after the following manner, which experience has shown to be perfectly feasible: A quantity of copper is melted in a suitable furnace. The plates to be coated are first heated to about a white heat, in another furnace, and in that condition gently dipped into the molten copper, as in a bath, and partially submerged. They are sufferred to remain thus for a sufficient length of time to allow the particles of copper to become, to a certain extent, infused into the surface of the iron plate, upon which it readily forms a thin coating of copper. When the entire exposed surface is thus covered, no galvanic action can take place. Experiments of this description have also been made in this city with boiler iron, designed to be employed in the construction of steam boilers, with but partial success, however. Similar experiments may have been made in other places, and perhaps with better success. In the experiments here, it was found that the plates were unequally affected by the copper. Some entire plates, and portions only of others, were so completely penetrated by the copper as to form with it an amalgam, of much less tenacity than either metal in a separate state. In fact, the plates thus prepared were mostly rendered unfit for use. This difficulty probably arose from the inequality of heat to which the iron plates were subjected. There can be but little doubt but that boiler iron could be so manipulated, in this process, as to greatly improve its durability.

A better way, however, to apply this copper coating will undoubtedly be found in the process of electrotyping, which, under recent improvements, is being carried on upon a very large scale, and at greatly reduced prices. So perfectly and firmly may iron be plated with copper in this manner, that large iron bolts, for ship and other fastenings, are now being thus covered at a cheaper rate than the entire bolt can be made of copper. An additioonal advantage is thereby given in strength, while in durability the copper-plated bolt is found to be fully equal to a similar one manufactured entirely of that material. No difficulty is encountered in driving such bolts.

The process of electrotyping is employed on a gigantic scale in Paris. The lamp posts of that city are now being covered with copper by this process; also some of the large fountains of that metropolis. A full-sized duplicate of Trajan's column at Rome has also recently been subjected to this process. Of course objects of such vast proportions are electrotyped in sections. The process of electrotyping will doubtless soon employ a large amount of this metal, the production of which is becoming so important an item in the industrial pursuits of this State.

An important class of officers will probably soon grow out of the new Federal Liquor Law, which requires discriminating taxes upon adulterated spirits. Persons scientifically skilled in the combination and adulterations of liquors, will doubtless have an eye to such positions.

The Mining and Scientific Press Patent Agency,

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor; *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction, and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every caveat	10
On every application for a patent	15
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulched in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

Terms in Advance.—Having adopted the cash system, all payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

San Francisco:
Saturday Morning, January 30, 1864.

MECHANISM—ANCIENT AND MODERN.

The most important achievements of modern mechanism consist mainly in improvements on ancient ideas. The earliest application of mechanism was no doubt directed to the production of clothing. When man was placed in the garden of Eden, his hunger was readily supplied with the products of Nature. We read that the Creator placed in the garden every fruit-bearing tree, which was to be food for man. The first pair were happy and content in their primeval home, until the wily serpent induced our common mother to partake of the forbidden fruit, which led the way to artificial wants.

Both revelation and history are silent as to the period when woven fabrics were first invented. Preliminary to the art of weaving, however, must have been the use of the spindle. Spinning was the first, or at least among the first-born of the arts. Eve must, in some manner, have spun her thread before she sewed together the leaves which formed the staple of her primitive garment. From that period to the present, and throughout all lands, spinning and weaving have been the peculiar province of the sex whose curiosity led to its necessity, and whose quickness of perception suggested the simplest and most convenient remedy for its error.

The distaff was undoubtedly almost or quite cotemporaneous, in its introduction, with the spindle. They both date far anterior to the historic period, and were common instruments in the ancient legends of the heroic and mythic epochs. Spinning lies at the very threshold of human industry and human culture. Queens were, in early days, taught to excel in it, and goddesses even were not ashamed to teach the art. Clotho, we are told, held the distaff, while Lachesis twirled the spindle and Atropos determined the length of the thread. Again, we read that Hercules was once playfully rapped over the head by Omphale, for awkwardness, while she was trying to teach the old fellow how to use the distaff. But few nations, even the most barbarous, have been in ignorance of these simple instruments. Wherever they are not found, man has ever been a traveling, homeless wanderer—a vagabond roamer in forest wilds. Home and its surroundings have ever been measured in their amenities by the progress which has been made in improvements in these two simple instruments of mechanism.

The spindle of to-day, and the manner of accumulating the thread upon it, is almost identical with that described by Homer, Horace and Pliny. It was "twirled," in ancient times, by nimble fingers, sometimes much as a boy would spin a top by the aid of his thumb and fore-finger; at others, by various simple devices, obtained by straight motions alone. The modern improvement is simply the application of a circular for a straight motion, which may readily be made continuous.

Rotary motion is mainly a modern device, and to it we are indebted for nearly all the elegancies and conveniencies of civilized life. Revolving mechanism is the substratum of the present advanced stage of arts, science and civilization. Without it, steam would be a nullity; the printing press would be but the *thing* it was a hundred years ago, and the busy hum of machinery would lapse into the forward and back, up and down motion of the flail, the hammer, or the ancient sliding sieve. The general application of rotary, in place of other movements, is the modern starting point, from which we may measure nearly all mechanical progress which has been made within the historic period. It is the epoch in the lapse of time which separates modern from ancient mechanism. From thence it is that useful ideas have begun to unfold and develop themselves in rapid progress. The newly-awakened genius of man, from that day to the present, has been moving on in a constantly increasing ratio, employing new combinations, moulding matter into new forms, detecting therein new properties, drawing therefrom novel and beneficial results, and extending and refining the realities, conveniences and elegancies of life, until we have now arrived at an age and hight of improvement, from which we look back upon past ages in wonder and astonishment at the progress which has been made, while we are absolutely bewildered when we consider the yet gigantic advances still in contemplation in every department of human progress!

Coal Oil—"A Warranty that is Safe to Bet On."

Mr. Editor;—Under the above caption the following item appears in a contemporary of yours this week:—

"Some of the coal oil dealers around town are securing customers by sticking up placards in their stores, assuring the public that their oil is non-explosive, and warranted entirely free from adulteration with camphene or alcohol."

This matter does not deserve to be disposed of quite so summarily. It has been the subject of legislation in most of the Eastern States, and an act of Parliament, in England, has been passed, to prevent the storing of dangerous petroleum in large cities. Benzine, or the volatile portion of crude petroleum, is a natural cause of explosion. Much ingenuity was applied in the States to obtain an instrument for determining readily when an oil had been sufficiently purified to be safe. The hydrometer is no security. I was engaged by the successful inventor in New York, last winter, to examine and report upon his method. I am informed that want of attention to this point prevented the introduction of California petroleum, some time since. Lamps suited for heavy, safe oils, burn with various defects with lighter oils. The increased cost of insurance for the latter has tended much to limit imported oils to a safe standard. The question is again becoming important with the new development of this industry at Santa Cruz. I. H. Churchill.

A Mining Advertiser.—This afternoon we shall issue a "Mining Advertiser," by placing the advertising pages of the Press, with the stock reports and other matter, into a smaller sheet, a very large edition of which will be circulated gratuitous throughout this city and the interior of California and Nevada Territory. We do this to give mining companies the benefit of an extraordinary large circulation for their advertisements, and present a channel through which all mining notices may be cheaply consolidated into one sheet for the convenient reference of all stockholders. Secretaries of companies will please hand in their favors as early in the week as possible—not later than Friday. Rates for advertising mining notices, $2 50 per square of ten lines, per month. Advertisements will appear both in the Press and Advertiser.

New Postmaster.—The telegraph of Wednesday announces that R. F. Perkins was confirmed as postmaster of this city, in place of Parker, removed, in executive session of the Senate, on Tuesday last.

Mr. Jas. P. Newcomb recently returned from Arizona, furnishes us some interesting matters form that section.

The College of California, located at Oakland, has recently added a new course of instruction, to be known as "The Mining and Agricultural College." This department, will, for the present, be under the especial charge of William P. Blake, Esq., as director and professor of mineralogy, geology and mining; and by Sherman Day, Esq., (Superintendent of the New Almaden Quicksilver mine) as professor of mine construction and surveying. Other branches, such as chemistry, astronomy, engineering, zoology, etc., remain to be filled. This department is to be located centrally in San Francisco, and instruction in its branches is to be given in part by lectures as much as possible in the evening. We presume its details will be furnished by future advertisement to the public.

The Laboren is worthy of his Hire.—We regret to see that Mr. Scott, of Almeda, has introduced a bill in the Legislature requiring legal advertisements to be given for one year to the paper in each county making the lowest bid. The effect of this proposition, if adopted, would, without doubt, be to give the public printing to the shabbiest sheet in each county, to those having the smallest circulation, and at such price as would render the contract a burden to a good printer able to properly fulfill his obligations. We believe in *fair* prices for all mechanics, and so direct an appeal to the mercenary meanness of the lowest members of a craft, appears to us entirely out of place in so honorable a body as our present Legislature, where first class mechanics would naturally look for encouragement.

East Lynne G. and S. M. Co.—This company is located at Owens river, Inyo District, Tulare county, and was discovered by a party of explorers, who left this city some six months ago. We have been shown exceedingly rich specimens of both gold and silver-bearing quartz from this mine, and from what we have been able to ascertain, everything appears very promising. It already stands high in the estimation of the public. They intend, shortly, to work it in a

In Favor of Consolidating.—Fisher, of the Red Bluff Beacon, in a friendly notice of the Pacific Monthly, shows evident signs in favor of consolidation. Can't come it by proxy, Fisher! Step aboard the *Gem* some day and come down, and as you are pretty good looking, we will give you an introduction, and, *perhaps*, a certificate of character, if you behave yourself in future. Bring your fishing tackle, old angler, when you come trouting.

The New Sugar Refinery on Battery street at at the corner of Union, is now completed, so far as the building is concerned. The institution will be known as the "Bay Sugar Refining Company." The capital stock is $250,000 divided into 1,000 shares of 250 each.

Treasure from the North.—The steamship Oregon arrived on Saturday last, from Victoria (V. I.), and Portland (O.), bringing $131,000 treasure.

Treasure going East.—The treasure shipments per Mail steamer Golden City, which sailed Saturday, were: to England, $1,038,266 33; to New York, $448,804 36; to Panama, $10,000; to Havana, $8,000, and to Acapulco, $1,964,67, making a total of $1,507,035 36.

For and Against.—In Virginia City and Flowery District, N. T., only 603 votes were cast for, to 3,645 against the Constitution—more than six to one. Gold Hill went five to one against it. A pretty decided demonstration.

The State Senate, on Thursday passed to engrossment an act repealing the Specific Contract bill of the last session, by a vote of 18 to 16.

Signs of the Times.—It is said that all "signs" fail in dry weather, but those recently painted for this office, by Fred Mansell, are declared not only decidedly handsome but exceptions to the above rule.

MINING SHARE MARKET.

The Mining Share Market still coatinues its unusual activity. Tho amount of transactions the past week foot np to the very largo aggregate of $1,972,807—a considerable excess over last week.

Ophir shares opened tho week at a decline of $50 which was stendily maintained until Thursday when they suddenly dropped to $1,550 and remained inactive on Friday. 594 shares have changed hnnds since our last issue. Mueh speculation exists with regard to the npproaehing dividend.

We quote Gould & Curry at $4,950.

Savage hns still farther improved and is much songht after. We quote closing sales at $3,375, buyer thirty days. This is an advaaee of $275 over last quotations. Indications at the minc still continue favorable, particularly in the lower level.

Chollar shares still continue to be largely dealt in, and at declining rates. We quote sales of 582 shares, nt from $285 @ $352 cash. We notiee a single transaction, on Saturday of 64 shares at $1,000, buyer sixty dnys. Mueh mystery appears to hang around the operations of this company. They are still sinking on their mine.

Lady Bryan still coatinues to be largely dealt in at a slight advance and without any material fluetuation. We quote sales of 2,083 shares at froai $55 @ $63.

Desert is inactive. We quote but one transaction of 15 shares, which found a buyer at $21.

Burning Moseow has manifested increased netivity daring the past week, but at declining rates, and with a marked falling off in interest during the last two days. Report says that the directors of this company are about maturing plans for its future management, which will greatly improve its stock. We quote sales to the extent of 598 shares at prices ranging from $102 @ $120. Aa assessment of $15 per share, levied upon this stock, the past week, has had the effect to produce the present depression, which will doubtless prove but momentary.

Baltimore American continues to be considerably enquired after, at well maintained rates. 420 shares found buyers at from $37 @ $46½

Eldorado hns beca more enqaired after the past week, nnd at improved rates. 185 shares have changed hands, at from $50 @ $56; fully $5 better than the week previous.

Melones h is still further advanced. It reached $75 ou Saturday last, at which rate 40 feet fouud purchasers. On Monday it receded to 55; recovered to 75 on Tuesday, and closed yesterday at 62½. We learn that the report of a rich strike, to which we gave credence last week, was without foundation. The present advance is the result of an improved management of the ores at the mine.

California shares found a purchaser for 60 shares, the past week, at $1,000—buyer 30 days.

Bullion, Gold Hill, has slightly declined. It may be quoted at $62@62½.

North American fully maintains its advance of last week, nnd in fact may be quoted at a slight improvement. 188 shares have changed hands at from $84@90.

North Potosi has manifested considerable activity the past week at an important advance. These shares opened the week at $38, remained steady until Wednesday, advanced to 65 at the openiag of the Board on Thursday; suddenly fell to 35 at the afternoon session, but recovered to 65 yesterday.

Mount Hope (Consolidated) has been considerably sought after, the past week. Commencing at $7 this stock gradually advanced to $10½ yesterday.

Uncle Sam, which last week declined to $500, has again rallied, and been in request, the past week, at from $600 to $635.

Uncle Sam (Flowery District), has found a market at $5.

Harmon, El Dorado coun.y, has more than maintained its advance of last week. We quote sales of 75 shares at from $24 @ $39.

Blue Ledge; we quote sales of 40 shares at $9¾ to $11; Pride of the West has been considerably dealt in nt $95 @ $105; Adriatic may be quoted at $11 @ $12½; Golden Swan has changed hands at $31; Norton at from $8 @ $10; Sierra Nevada at $80 @ $37½; but little enquired af er; Rhode Island at 7½; Shawmut has been considerably enquired after at $25 @ $30; Seneca has sold at $10; Baltic at from $167½ @ $180; Mount Davidson Tunnel $2 @ 2.87½; Mountain View, $9½; Gaudaloupe, $30; Victor Hugo, $20; Silver Eagle $10; Falls of Clyde, $2; Buckeye, $14; Chrystal, $4; Lady Adams, $2¼; Tri-Union, $6; Enterprise Tunnel $6; Badjazette, $5; Lafayette, (G. H.) $10½; Sedgwick, $2; Eureka, $32; Hawkeye (origiaal) $50; Cha's Cany, $10; Nevada, (J. G.) $85 @ $100.

Crockett, (Consolidated.) $15; Burnside, $17½ @ $19½; Imperial, $145 @ $167½; Yankee Blade 10 @ 15; Central American, 1¾.

North Ophir is enquired for nt from 5 @ 9: Daney, at 67½; Spanish, No. 2, at from 34 @ 47½; Yellow Jacket, 900.

Esmeralda.—But little is doing in Esmeralda shares, save in Real Del Monte, which still continues quite active, nt somewhat fluetuating rates. 1,599 shares of this stock has changed hands, since our last issue, nt from 130 @ 200.

We quote Wide West at 39 @ 42½; Antelope at 260; Willow Springs at 2; Utah at 22½; Coso at 5; Silver Hill, 15; Campton is considerably enquired after nt from $6 @ $9; Greenville $20.

Reese riven. Standard 30 @ 35; Burgess, 12½ Conqueror, 25 @ 26; Flora, 7; Tory, 48;

Calaveras Silver Ore.—Our travelling correspondent has sent from Murphy's Camp, by Mr. McGowon, of Alameda, some rare specimens of silver bearing rock, of which we shall have more to say at some future time.

Crowaino.—Communications from different sections are crowding in upon us thick and fast, so mueh so that we have had to defer several valuable contributioas until next week.

Worth Readino and Preserving.—Next week we shall publish Prof. J. D. Whitney's Lecture on "Mining," he having kindly acceded to our request for tne MSS for publication. Those who had the pleasure of listeaing to the lecture on Thursday Evening, will agree with us that every seatence is worthy carcful consideration and preservation.

Automaton Mechanism.—Much attention appears to be directed, at the preseut time, to automatic mechanism. The latc patcat office reports coatain numerous awards of patents for automatic toys. The Eastern public are treated to frequent exhibitioas of such devices. One Col. du Hamel recently exhibited an automatic horse in New York. The latest speciimen is the walking doll. Some years ago there was a talking figure exhibited in New York which actually spoke several senteaces. Nothing has, however, yet surpassed Vaucanson's duck, which ate, swallowed and digested its food!

Informal Meeting.—We are requested to state that the "Pacific Board of Brokers" hold an informal meeting for the sale of stocks at their rooms each day from ¼ to eleven to ¼ past, (Sundays excepted.)

Early Blossoms.—The peach trees on Williams' ranch, about five miles below Sacramento, are commeacing to put out blossoms.

MINING AND SCIENTIFIC PRESS.

List of Principal Contents.

No. 1 of Volume VIII—January 2, 1864.—Mastodon Thigh Bone—Illustrated; Mining Review for 1863; Practical Education; Legislative Aid; Taxing the Mines; Gold Mines of New Zealand; Mining and Metallurgical Journal; A Trip to the Mines—Mariposa county; Silver Mountain District: The Lady Bryan Mine; Miscellaneous Items; Knight's Ferry—by our Traveling Correspondent; Hints to Prospectors; Letter from Lower California; Stock Remarks; Summary of Mining News—Gleaned from Various Sources; The Mining Interest; Milling Associations; Keystone Concentrating Works; Report of Stock Sales for the Week—Prices Bid and Asked; List of New Incorporations; Recent Patents; California Inventions; Mining Companies, Assayers', Stock Dealers', Machinists', Foundrymen's, and other advertisements.

No. 2—Jan. 9.—Hunter's Grain Separator—a new Invention, Illustrated; "A little Learning" not "A Dangerous Thing;" Crimea House—Copper Mines, by Our Traveling Correspondent; Reese River Correspondence; Summary of Mining News—California, Washoe, Humboldt, Reese and Owen's River Items; Annual Report of the Gould & Curry Mining Company; Owen's River Letters; Copper Mining in Canada; Short Paragraphs; Industrial Facts; Annual Treasury Shipments; Encourage Home Industry; Beginning of the New Year; Home vs. Distant Mines; California Copper Smelting Works; California Academy of Natural Sciences; Mining Share Market; Our Enlargement; Record of Mining Incorporations; Patent Department; The State Library; About Marvelously Rich Mines; Copper, its Price and Demand; Editorial Items.

No. 3—Jan. 16.—A Patent Stone-Breaker—with Illustrations; Extraordinary Mental Developments; Reese River Letters—Smoky Valley, Winter Mines; Sanitary Remarks; Hints to Prospectors; Mining Summary—Placer county, Sierra, Yuba, Reese River, Humboldt, Washoe, Esmeralda, Lower California and Colorado Items; Statistical Articles; New Patents; Lost Arts; Editorial Paragraphs; Mining Share Market; Ophir Co. vs Burning Moscow; Our Harbor Defences; New Incorporations; Stock Reports; Branch Mint Report; Petroleum as Fuel; Varieties; New Mining Notices and Industrial Advertisements.

No. 4—Jan. 23.—Indian Bar Copper Mines—Illustration of the Washington Mine; Correspondence—Chinese Camp and Jamestown; Reese River Letters; Summary of Mining News; Washoe Mining Stocks; A Durable Ink; The Metal Market; Roll of New Incorporations; The Opinions of Our Neighbors; Miscellaneous Information—Mechanical and Industrial Facts; Patent Department; A Mining School for California; The Mechanics' Institute and Fair; From Lower California; Magnificent Specimens; The Beauty of the Season; Silver Bricks; Mining Share Market; A Mining Advertiser, Editorial Paragraphs; Important Success; Mining Laws—a good suggestion; Stock Reports; Total Stock and Mining Transactions for the week; Chippings; New Mining Notices, etc.

The Mining and Scientific Press contains 16 pages in each No., and 417 in each volume; two volumes a year. Terms, in advance, 1 year $5; 6 mos. $3; 5 copies, 1 year, $20. For sale by all newsdealers. Liberal commissions allowed all who act as agents.

DEWEY & CO., Publishers.

Cor. Washington and Sansome streets, San Francisco.

Record of New Incoporations.

The following is a list of the companies having their principal place of business in San Francisco, which have filed articles of incorporation in the County Clerk's office since our last report.

Don Quixote Gold and Silver Mining Company.—Location, Owens River District, Mono Co., California. Capital stock, $150,000, in shares of $100 each. Trustees: S. H. Gibbs, C. A. Niles, J. R. Westervell, G. M. Sommers and Wallace Stewart.

Cinnabar G. & S. M. Co.—Virginia district, N. T. Capital stock, $120,000, in shares of $100 each. Trustees: Charles B. Grant, Daniel Murphy, Isaac Davis, John Kehoe and H. J. Walton.

Lucinda G. & S. M. Co.—Reese River District, Lander county, N. T. Capital stock, $80,000, in shares of $100 each. Trustees: John M. Loane, Benjamin Brady, B. Herenghi, Adolph Falk and B. Fisher.

Oregon G. & S. M. Co.—San Antonio district, Lower California. Capital stock, $262,000, in shares of $100 each. Trustees: J. Funkenstein, H. Breslower and J. Marks.

Tectonia M. Co.—San Miguel Ranch. Trustees: P. B. Oppenheim, Samuel Purdy, Hart Pineers, J. W. A. Gilmore, C Church. Capital stock, $820,000.

Kate Kearney G. & S. M. Co.—Reese River. Trustees: Arthur W. Gedney, B. E. Hickok, E. W. Wadley. Capital stock, $220,000.

Detroit and Buffalo G. & S. M. Co.—Location, Trustees and capital stock, same as above.

Red Jacket G. & S. M. Co.—Location and Trustees, same as above. Capital stock, $120,000.

American and Foreign Patents.—Letters Patent for Inventors can be secured in the United States and foreign countries through the Mining and Scientific Press Patent Agency. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the Mining and Scientific Press, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Stockton.—Patrons of the *Press* will obtain the paper at the News Store of Kerskl Bros, who receive them by Sunday morning's boat.

Our Traveling Agent, J. M. Wolf, contemplates an early visit to Nevada, Placer and El Dorado counties, and Nevada Territory. Mr W. is an observing and reliable gentleman, and our friends in sections visited by him, will confer mutual favors upon themselves and us, by giving him a cordial reception.

The Publication of Mining Notices in the Mining & Scientific Press obtains for them a more general circulation, among parties directly interested, (in this city and throughout the mining districts of the coast, than can be secured through any other medium. State laws require their publication but once a week, and Secretaries and Trustees can make a material saving of costs to stockholders by ordering their advertisements inserted in the journal most properly entitled to receive their patronage—the weekly Mining and Scientific Press.

Triunfo Gold and Silver Mining Company.—At a Meeting of the Trustees of the Triunfo Gold & Silver Mining Co. held January 23d 1864, an assessment of One ($1) dollar per share was levied on each and every share of the assessable stock of the Company, payable immediately to the Secretary, at the Office of the Company, No. 1 Government House, in United States Gold Coin.

5v8-5t HENRY S. BROOKS, Sec'y.

Black Swan Gold and Silver Mining Company, Reese River District, Lander county, N. T.—Notice is hereby given, that the regular annual meeting of the stockholders of the Black Swan Gold and Silver Mining Company will be held on the first day of March next, at 4 o'clock P. M., at the Company's office, No. 305 Montgomery street, San Francisco. By order of the Trustees. J. S. LUTY, Secretary.

San Francisco, Jan. 27, 1864. 5v8-5t

NAVIGATION OF THE COLORADO.

The "Colorado of the West," as it is called to designate it from the several other rivers of the same name, is next to the largest stream that flows into the Pacific Ocean. It rises in Nebraska and Oregon, and drains on its way two-thirds of Arizona and portions of Utah and California—an area of over 300,000 square miles. The Green and Grand rivers are supposed to unite, somewhere near the boundary of Utah, and form the Colorado. Below this point, for a long distance, nothing is known of it, and its borders are supposed to be uninhabited, even by the Indians—winding its way through solitude most profound.

Of late, considerable attention has been directed to the navigation of this river, consequent upon the development of mineral wealth in Arizona, and the organization of that Territory. In 1856 Lieut. Ives explored the Colorado to the mouth of Black Cañon, with a little stern-wheel steamboat, during the lowest stages of the stream, and 22 inches of water was found over the shoalest bar. Since that time the "Colorado Navigation Co." have steamboated upon the river, relying solely upon the Government freight. Within the last year discoveries of mineral wealth have attracted thither hundreds of adventurers and capitalists, and the demand for supplies has been greater than could be accommodated overland, besides some more economical method of transportation was necessary—12 cents per pound being too high a rate for freight, with a navigable stream so near at hand. The old steamboat company, fearing an opposition, attempted to meet this demand, but have made a signal, and to the hundreds who have depended on them, a disastrous failure. This great drawback is about to be righted by the establishment of another line of steamboats on the river, and the importance of its navigation will soon become apparent. It will be found the most economical avenue for the transportation of supplies to New Mexico and Utah; computed from what is now considered the head of navigation, 700 miles of land travel can be saved to Great Salt Lake. The Reese River country will find the head of navigation upon this stream to be the nearest point of navigable access, and an immense track of country, the value of which is yet to be disclosed, must derive its support from this river. It is estimated to be 500 miles from the head of the Gulf to the present head of navigation on the Colorado; but its waters may be found navigable even up the Green river. There is certainly a rich harvest in store for enterprise and adventure in the navigation of this vast and yet unimproved channel.

Mining Incorporations of 1863.

We present the following tabular statement of the Mining Incorporations organized in this State during the past year:—

January	48	Gold & Silver;	6	Copper;	2 Tunnel.
February	108	"	10	"	3 "
March	223	"	22	"	23 "
April	292	"	44	"	15 "
May	245	"	36	"	8 "
June	291	"	58	"	8 "
July	259	"	38	"	3 "
August	259	"	61	"	4 "
September	246	"	42	"	7 "
October	236	"	35	"	8 "
November	166	"	14	"	2 "
December	134	"	14	"	3 "
Total	2467		380		86

Making a grand total of 2,933 gold, silver and copper mining companies which were organized in this State during the year 1863.

Each of these corporations, on an average, represents 2,000 shares of stock, or an aggregate of nearly 6,000,000 shares. Most mines represented by these shares are intended to be worked, or their projectors would scarcely go to the expense of incorporating them. Now it is evident that they cannot be worked to any extent short of an assessment of at least 25 cents per month to the share. This would give us an average of $1,500,000 per month, required to prospect our mines. We presume this amount is actually being raised at the present time, and transmitted, chiefly in the form of tools and miner's supplies. It is moreover estimated that this amount will soon be greatly increased. The sum now called for per month is just about equal to the yield of the transmontane mines. Unsatisfactory as this exhibit may appear to most readers, we have the fullest confidence in its reliability as an investment. Probably the early history of no mining country on the globe can make a better showing, and yet more money has been made from mining investments, in proportion to the capital involved, than from any class of investments which has ever been presented to the public.

UNION PACIFIC RAILROAD.—A dispatch dated at Omaha City, Nebraska, December 12th, to the Eastern papers, says:

Professor Hodge has taken a survey of the Union Pacific Railroad, and reports that there are easy grades through Cheyenne Pass, and abundant coal and iron ore on the eastern slope of Black Hills, six hundred miles due west from Omaha.

Patent Claims.—We will furnish, on application, the claim of any invention that has been patented within the last fourteen years. The name of the patentee, date of patent, when known, and two dollars for copying, should be sent.

Back Numbers.—We have a limited number of past volumes of the PRESS on hand, which will be sold, neatly bound, at reasonable rates. A portion of the back numbers of the paper can be had by the single copy.

San Francisco Board of Brokers.

☞ There will be an OPEN BOARD at their rooms, No. 430 Montgomery street, at 10½ o'clock A. M. DAILY, Sundays excepted.

Parties interested in buying and selling Stocks are invited to be present. By order.

ENLARGEMENT

—AND—

Important Improvement

—OF THE—

MINING AND SCIENTIFIC PRESS.

Enlarged from Eight to Sixteen Pages at the Commencement of Volume VIII, January 1st, 1864.

TWO VOLUMES (OF 416 PAGES EACH) PER ANNUM.

PUBLISHED EVERY SATURDAY.

SUBSCRIPTION TERMS IN ADVANCE:

One Volume, six months,.....$3.00
Two Volumes, one year,.....5.00
Five Copies, one year,.....20.00

The present proprietors of this journal announce with confidence their determination to render to the friends of Science, Mining and Mechanical Industry a newspaper published upon this coast worthy of their patronage at home and their pride abroad. We shall seek favors only through our endeavors to merit them.

The Editorial Department

Will be conducted with ability, in a liberal and reliable manner sparing not in expense, veneration for honesty, or respect for common sense.

Competent Correspondents

Will be employed to furnish us full and reliable information concerning newly-discovered mines; and through vigilant efforts we shall secure for our readers the latest intelligence from all important mining localities. In our list of

Occasional Contributors

We have the privilege of numbering gentlemen ranking among the most talented and experienced writers who manifest a prominent interest in the progress of Art and Science upon this coast, including the names of

PROF. J. D. WHITNEY, J. H. CHURCHILL, A. M.,
DR. T. M. LOGAN, A. B. PAUL,
DR. J. A. VEATCH, H. S. BROOKS,
REV. O. C. WHEELER, W. WADSWORTH.
M. ATWOOD, T. PRICE.
PROF. W. H. BREWER.

Illustrative Drawings and Engravings

Superior in finish and useful and attractive in character, will be published from time to time, representing the most important new inventions and improvements in the art and science of

Mining and Mechanism

Developed upon this Coast. Each number of the paper will contain full and correct reports of

Sales by the Stock Boards of San Francisco.
Sales by the Stock Board of Virginia City.
Sales by the Stock Board of Esmeralda.
Sales by all Mining Stock Boards.
Reports of Bids and Sales in San Francisco.
Reports of Bids and Sales in the Territory.
A Weekly Review of the Stock Markets.
A Weekly Review of General Mining Interests.
General Summary of California Mining News.
General Summary of Mining everywhere.

Valuable Information for all Miners.
Indispensable Knowledge for practical workmen.
Practical Suggestions for inteligent artizans.

Valuable Facts and Statistics

Essential to members of all trades and professions; the best approved methods of mining; the latest discoveries and inventions in mining operations; practical, scientific views upon geological and mineralological questions; the proper methods of reducing ores and saving the precious metals. In fact every sentence calculated to lessen the number of hard blows useiessly rendered by miners and working men, and add wealth by intelligent saving of material or labor, will find welcome space in our columns. The paper will afford many

Practical Hints

With regard to the manner of working and securing mines, derived from the actual experience of parties in our own and other countries. Also hints concerning the location and possession of mining grounds; the laws peculiar to different districts and countries; and notices of all important decisions of the law in mining cases. As a

Book of Reference

The bound volumes of the PRESS will find no rival in value to the intelligent and industrious citizens of the Pacific Coast, who cannot but feel a source of pride in the history of the inventions, discoveries and prosperous developments of the remarkable era through which we are now passing.

The Stock Record

As presented in our columns will be found correct, distinct and most convenient for preservation and future reference.

For Sending Abroad.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and Newsdealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

DEWEY & CO., Publishers.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

Brown's Bronchial Troches for Coughs and Colds.—A NEGLECTED COUGH, COLD, AN IRRITATED OR SORE THROAT if allowed to progress, results in serious Pulmonary Bronchial and Asthmatic Diseases oftentimes incurable. BROWN'S BRONCHIAL TROCHES reach *directly* the affected parts, and give almost immediate relief. For BRONCHITIS, ASTHMA, CATARRH, and CONSUMPTIVE COUGHS the Troches are useful. PUBLIC SPEAKERS and SINGERS should have the Troches to clear and strengthen the Voice. MILITARY OFFICERS and SOLDIERS who overtax the voice, and are exposed to sudden changes should use them. OBTAIN only the *genuine*. "Brown's Bronchial Troches" having proved their efficacy by a test of many years, are highly recommended and prescribed by Physicians and Surgeons in the Army, and have received testimonials from many eminent men. Sold by all Druggists and dealers in Medicine in the United States and most Foreign countries at 25 cts. per box.
Agents for California, REDINGTON & Co., San Francisco. 5-1m

Mr. Jarvis Jewett is our duly authorized advertising agent and collector in this city.

5v8-tf No. 707 Montgomery street, Brokers' Block.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

IMPORTANT INVENTION!
THE SUBSCRIBER OFFERS TO THE PUBLIC HIS
Patent, Double-Action,
WOOL, COTTON AND HAY PRESS,
The cheapest, most effective and most economical Press in use for the above Purposes.

This Press acts by a combination of the three mechanical powers—the Screw, the Lever, and the Wedge.
Its cost is less than any other in use. It operates with less power, more speed, and occupies less space than any other.
To Shippers and Packers of Wool, Cotton, Hay, or any similar goods, or for packing in general, where compression is required, it will be found of great economic value.
It is many action in principle, and can be so constructed as to pack from one to four or more bales, at one and the same time.
The Inventor challenges competition with any other machine in use, employed for similar purposes.
The Patentee would make a liberal proposition to any suitable person, with small capital, to take an interest with him in the manufacture and sale of this machine, and for several others of equal importance, the details of which are now completed, and for the manufacture of which he is prepared to make contracts.
All communications or orders should be addressed to J. M. Parry, Patentee, at Grush & Co.'s, pattern and model makers, on Fremont street, between Mission and Market streets, San Francisco, where a model and drawing may be seen.
5v8-tf J. M. PARRY, Patentee.

VALENTINE'S DAY!
MONDAY,.....February 15, 1864.
VALENTINES in solid Rosewood and Mahogany Cases, with Lady's Watch, and with Lady's Pin and Ear Drops, from Tucker's Jewelry establishment.

VARIOUS CHIPPINGS.

A terrible accident recently occurred at Niagara Falls by which one unfortunate individual lost his life. A scow, on board of which were five men, unfortunately became unmanageable, got into the current, when the men all jumped overboard and struck out for the shore. One was unable to make headway against the current and went over the falls.

A Stable of the Overland Stage company, about nine miles this side of Salt Lake City, was destroyed by fire on the 13th inst. It took fire from the caudle of one of the employees.

The small pox is prevailing to an alarming extent at Gold Flat, near Nevada.

A theatre is to be opened at Reese River in the Spring.

A line of stages has recently been started between Virginia City, Gold Hill and and American Flat. Two trips a day will be made.

New potatoes, green peas and fresh tomatoes are among the luxuries now being enjoyed in this market.

The California State Telegraph Co. paid a dividend of one per cent. on the 15th inst.

The majority against the Nevada State Constitution was about 5,000.

The Washoeites must be great consumers of lager beer, as the ninth lager beer brewery, in and about Virginia City, is in course of construction.

The famous natural bridge, in Virginia, is advertised for sale.

The Arizona Exploring Expeditiou, at Washoe already numbers about forty members. It is desired to enroll one hundred and fifty names before starting into the wildcruess.

Rev. John Francis, of Oakland, was agreably surprised a few evenings since by receiving from his friends a gold watch and sixty dollars.

The new State of Western Virginia has been divided by her Legislature into townships, like other free States, and unlike the slave States, which have no civil divisions below counties. She has also adopted a comprehensive free school system.

There is an American railway car-line in operation between the Place de la Concorde. Paris, and Sevres.

The city railroad companies in Philadelphia have advanced their fare to eight cents.

A baker named Grimeaux, living at Rich Bar, east branch North Fork Feather river, was drowned on the 16th inst.

There are 39,700 boys, and 38,355 girls, between the ages of 4 and 18, in California.

A patient in the City Hospital, St. Louis, died while the surgeons were administering chloroform against his remonstrance.

The estimate clothing for the army for the next fiscal year is $58,000,000.

About two-thirds of the entire taxable property of the Confederate States consists of land and slaves.

The Mexican affair has thus far cost France 210,000,000 of francs.

The New York Central Railroad is 555 miles long. Such an affair would be the pride of a little place like Europe, but it is nothing for America.

The twentieth century is likely to dawn upon the United States with a population of 100,000,000.

The Mississippi River Pilots are now getting from $2,600 to $3,000 per year.

The New York druggists have organized a drug exchange.

A man sat down on the sidewalk in Quebec recently and froze to death, dozens of people passing all the while.

Stages run from Los Angeles to Colorado in three and a half days.

The people of Oroville are preparing for a grand celebration of the completion of the California Northern Railroad.

The number of California soldiers now in the employment of the Government, is fifty-four hundred.

One of the Virginia companies is styled 'The Orphan Boy and Sweet Alice consolidated.' A sentimeutal company that.

The Church of St. Aphrodisc. Beziers, France, was recently visited by lightning, which did little damage, but lighted all the caudles on the alter.

At the present time there is not a cotton spindle in motion in Lowell, Mass.

For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired. Pamphlets, containing weight, strength and price, forwarded free on application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

CROCKER'S
STOCK AND ASSESSMENT LEDGER.
Copyright secured—Price $10.

The necessity of a proper book for keeping the Stock and Assessment accounts of Corporations has long been very much needed. One that would combine economy and simplicity, and would not require the services of an experienced book-keeper to keep the accounts correctly. CROCKER'S STOCK AND ASSESSMENT LEDGER has met this requirement; we have submitted it to several Secretaries of corporations, and they acknowledge that the plan is admirable, and just what has long been wanted. The printed headings are a perfect explanation of the manner of keeping it; and any person, whether they understand book-keeping or not, cannot make an error in the accounts. The Stock and Assessment accounts are so arranged that the Secretary can in a moment tell how any stockholder's account stands, both in regard to Stock and Assessments. He can also, with the greatest case, trace any certificate, through any number of transfers, to the original one issued. It saves a great amount of labor, as it does not require one-fourth the writing of the ordinary method. It dispenses entirely with the old style of Stock Ledger, Stock Journal and Assessment Book, all three of which Secretaries have heretofore been obliged to keep, condensing the whole in one book. To a person who is Secretary of several companies, this book will prove invaluable, and we feel no hesitation in guaranteeing satisfaction to those who may order them. Specimen sheets sent to those who desire to examine it. The books are ruled with one or two accounts to the page. State which is preferred.

Published and for sale, wholesale and retail, by
H. S. CROCKER, & CO.,
Book and Job Printers, Sacramento.

CERTIFICATES and complete sets of books for Corporations, in the finest style, at short notice, and low rates. 4-1m

WHEELER'S
Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

TO OUR FRIENDS AND THE PUBLIC GENERALLY:—HAVING purchased the entire interest of MESSRS. FISHERS & CO., in this city, we shall, on the 1st. day of May assume the management of the

HAT EMPORIUM

so long conducted by that firm.

MR. WILLIAM H. MEAD, for the last seven years salesman with Messrs Fisher & Co., respectfully solicits a continuance of the patronage so long and liberally bestowed upon the old House, feeling entire confidence in our ability to suit in every particular.

MR. THEODORE VAN TASSELL, for eight years with Messrs Le Cay & Co., would be pleased to see his friends at his new place of business. The long practical experience of Messrs. Mead & Van Tassel in the Trade justifies them in saying that their work cannot be excelled either in finish or durability. Having perfected arrangements, we shall be in constant receipt, by every steamer, of soft goods of the very finest of FRENCH AND AMERICAN MANUFACTURE. Our Stock on hand is superb.

Call and examine, and judge of the merits of our claim to the title of "LEADERS OF FASHION."

Respectfully, MEAD & VAN TASSELL.

Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased.

COPPER ORES—Highest market rates advanced in cash, for Shipments. S. C. BRADSHAW, Agent,

509 Sacramento street, near Sansome.

HEPBURN & PETERSON'S.

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machines now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

nov8 3m* HEPBURN & PETERSON.

TREMONT HOUSE.

By order of the Board of Trustees.

The office of the Zenith Gold and Silver Mining Company has been Removed to No. 528 Montgomery street.

3-td M. G. ELMORE, Secretary.

Table Mountain Copper Mining Company.—Office, 528 Montgomery street, San Francisco. Notice is hereby given that in accordance with the laws of the State of California, and an order duly made by the Board of Trustees of the Table Mountain Copper Mining Company, there will be sold at public auction at the office of the Company, San Francisco, on FRIDAY, February 12th, at 11 o'clock A. M. of that day, to the highest bidder, in cash, for United States Gold coin, so many shares of the capital stock of said Company standing in the names of the following Shareholders as will be necessary to pay assessment No. 3, duly levied thereon and now being due and unpaid, together with the expenses of advertising and sale—to wit:

Name.	No. cert.	No. Shares.	Amt.
Samuel Geddes	7, 28, 30, 31, 32	67	257
N. H. A Mason	143	133	133
R. J. Vandewater	136, 156	34	24
John Holman	140	4	4
William Boyer	210	10	10
Levi Dress	205	5	5
Henry Van Vleck	187	25	25

By order of the Board of Trustees. M. G. ELMORE, Sec.

San Francisco, January 11, 1863.

Great Central Mining Company.— Notice is hereby given that by order of the Board of Trustees of the Great Central Mining Company, pursuant to the By-Laws thereof and the laws of the State of California, there will be sold at public auction, on WEDNESDAY, February 10, 1864, to the highest bidder, at the auction rooms of Jerome Rice & Co., 327 Montgomery St., San Francisco, so many shares of said Company standing in the names of the following persons as will pay the amount due for assessments, together with costs of advertising and sale:

Names.	Shares.	No. Assts.	Amount.
Jas S Trimble	100	1 2	$50 00
G W Mclone	10	2	2 50
M Devlin	20	2	5 00
W C Smith	5	2	1 25
P H Lovell	25	2	6 25
E H Rockwell	50	2	12 50
Max Strobel	600	1 2	300 00
Jas P Newcomb	100	1 2	50 00

2-1m H. C. KIBBE, Secretary.

Enterprise Copper Mining Co.—Office, 528 Montgomery St., San Francisco. Notice is hereby given that there will be sold at the office of the Enterprise Copper Mining Company, on SATURDAY, January 30th., 1864, at 10 o'clock, A. M., so many shares of the Capital Stock of said Company as will be necessary to pay all assessments due and delinquent, December 10th., 1863, standing in the names of the following parties:

	Share.	Am't. due.
William Harris	400	$100 00
J. P. Dameron	100	20 00
John M. Cannon	25	7 50
Thomas Donahoe	15	4 50
John Cochran	25	7 50
G. W. Mclone	01	3 00

By order of the Board of Trustees. M. G. ELMORE, Sec.

1m

Mount Eden Mining Co.—Notice is hereby given, that the Board of Trustees of the Mount Eden Mining Company, at a meeting held January 2d, 1864, levied an assessment of One Dollar on each and every share of the Capital Stock of said Company, said assessment payable immediately in gold coin to the Secretary, at the office of the Company, No. 620 Washington street, Room No. 3. H. B. CONODON, Secretary.

San Francisco, January 16, 1864. 3-5t

Scorpion Silver Mining Company.—Notice is hereby given, that by a resolution adopted by the Board of Trustees of the Scorpion Silver Mining Company, at a meeting held on this day, an assessment of twenty-five (25c.) cents was levied upon every share of the Capital stock of said company, to be paid in gold coin of the United States, on or before the 29th day of January, 1864, at the office of the company, No. 617 Clay street.

W. H. MARTIN, Sec'y.

San Francisco, December 29, 1863. j2-1in

Bullion Gold and Silver Mining Company, Van Horn District.—Notice is hereby given that a meeting of the stockholders of the above named company will be held at the office of the Secretary, at 7 o'clock on MONDAY EVENING, the 25th day of January next, for the election of officers, and the transaction of other legal business. By order of the President,

San Francisco, Dec. 19, 1863. (2-m) T. L. BIBBINS, Sec'y.

Silver Butte Consolidated Silver Mining Company.— Office 523 Montgomery street, San Francisco. Notice is hereby given, that in accordance with the laws of the State of California, and an order duly made by the Board of Trustees of the Silver Butte Consolidated Silver Mining Company, there will be sold at public auction, at the office of the Company, San Francisco, on SATURDAY, February 27th, at 11 o'clock A. M. of that day, to the highest bidder, for cash, in United States Gold coin, so many shares of the Capital Stock of said Company, standing in the names of the following shareholders, as will be necessary to pay assessment Nos. 2 and 3, duly levied thereon, and now being due and unpaid, together with the expense of advertising and sale—to wit:

VOLUME VIII. SAN FRANCISCO, SATURDAY, FEBRUARY 6, 1864. NUMBER 6.

A Valuable Paper on Mining.

LECTURE ON MINING, —AND— Its Relations to Civilization and Progress.

BY PROF. J. D. WHITNEY.

Delivered at Platt's Music Hall, San Francisco, on Thursday Evening, January 28th, for the benefit of the Mechanics' Institute.

After some introductory remarks, having reference to the interest which a San Francisco audience might be expected to feel in the proposed subject of the lecture, Professor Whitney continued as follows.—

The geographical and geological position of California in general, and of San Francisco in particular, is such as to lead to many interesting reflections of which I can only glance at one or two. If there is any feature of the earth's surface to which with propriety the epithet *grand* can ho applied, it is the crumpled borders of the Pacific Ocean, itself occupying one fourth of the earth's surface, which forms the western slope of the North and South American Continent. This crumpled border, which has been formed by the gradual sinking of the hed of the Pacific, comprises a vast assemblage of mountain chains, which are a unity in many respects, and to which the collective name of the Cordilleras of North and South America, or the American Cordilleras, may be applied. Although the Himalaya may bonst of higher mountain summits; yet, taken as a whole, the American Cordilleras constitute hy far the greatest assemhlage of mountain ranges in the world; they may in fact be called its back-bone.

Beginning at the southern end of the chain, with Tierra del Fuego, we pass north, successively, through the Patagonian, Chilian, Bolivian, Peruvian, and the Columbian Andes, which together constitute an unbroken wall along the Pacific shore for n distance of 4,500 miles in length, with a breadth of from 40 to 350 miles, and with a mean elevation of nearly 12,000 feet. In some places the range consists of a single ridge, in others, of two or more, with lofty plateaux, like that of Quito, between them, with a steep and rugged slope to the Pacific, and a gradual decline to the East into the broad and fertile plains of the Orinoco, the Amazon, and the La Plata. Sentinelled along on this giant wall, stand those volcanic cones, so graceful in their proportion, so dazzling in their snowy refulgence, never yet and never to be scaled by human effort, of which Aconcagua is the monarch, rising to the altitude of 24,000 feet above the sea level.

Sinking down on the Isthmus of Panama, so as to allow of an easy railroad communication across the chain, this great mountain system rises rapidly towards the north and spreads out fan-like through Mexico, across the whole territory of the United States, and finally bathes itself in the waves of the Arctic Ocean.

Within the limits of the United States the Cordilleras have spread themselves out to their greatest width, and in the latitude of San Francisco a line drawn across the chain from west to east will have its maximum length, which is just about n thousand miles, it being but a few miles less than that distance from this city in an air-line to Pike's Peak.

The whole area occupied by this mountain network in our territory is about 1,000,000 square miles, an area almost five times as great as that covered by the whole empire of France.

This vast plexus, or tangle, of mountains is but just beginning to be explored. In former days geographers used to represent a single continuous ridge stretching across the middle of our territory from north to south, like a huge caterpillar, and dividing the east from the west, giving the impression that beyond was a vast plain to near the shores of the Pacific; but we now know that this whole space is occupied by range after range of mountains, with comparatively narrow valleys between them, which probably altogether do not make up one-tenth part of the whole area, so that we have a stupendous labyrinth of ridges, enough to puzzle all the geographers and geologists to unravel for the next hundred years.

Although we are accustomed to call the eastern edge of this system of elevations the Rocky mountains, and the western side the Sierra Nevada and Coast Ranges; yet, unless we start with an artificial system arranged heforehand, we cannot say where the one leaves off and the other hegins.

The geographical position of San Francisco in respect to the Cordilleras of North America is indeed remarkable. Midway between the north and the south, just opposite to the widest mountain area, with the only harbor in all respects unimpeachable along our entire Pacific coast, it needs no prophet to predict her future greatness.

But it is chiefly to one feature of the American Cordilleras that I wish to direct your attention to-night, as especially connected with the subject of this lecture; this is, the great prominent fact, that this complex of mountain ranges is pre-eminently the mineral storehouse of the globe, the treasure-chamber of all nations. For the last three hundred years, a stream of metallic wealth, and especially of the precious metals, has been flowing steadily from various points in the Cordilleras of North and South America, towards the eastern countries, compared with which the rivulets proceeding from European and Asiatic mining regions were, up to the time of the opening of the Australian gold fields, at least, almost as nothing. Let us briefly trace the progress of discovery and see what influence the metalliferous character of the western edge of our continent, both north and south, has had on the march of events; for certainly the history of mining is by no means one of the least interesting chapters in the annals of the world's progress. No cause has operated so powerfully in bringing about those great migrations of nations, which have built up new empires in before unknown regions, as the thirst for the precious metals, and the history of the American Continent, for the first hundred years at least, is almost exclusively the history of adventurers in search of El Dorado, the land of gold. Lofty as may have been the motives of Columbus himself, the mainspring of those great geographical discoveries in the fifteenth and sixteenth centuries, which revolutionized the whole trade, commerce and political status of the world, was the love of gold. And does the history of mankind present a more gloomy and repulsive picture than is exhibited by the annals of Spanish conquest and settlement in Mexico and South America? Theology and the Bible were invoked, as they have been at all times, to sanction the most fearful horrors the mind of man can conceive of. In the language of Draper, "It was one unspeakable outrage, one unutterable ruin, without discrimination of age or sex. They who died not under the lash in a tropical sun, died in the darkness of the mine. From sequestered sandbanks where the flamingo fishes in the gray of the morning; from fever strickened mangrove thickets and the gloom of the impenetrable forests; from hiding places in the clefts of rocks, and the solitude of invisible caves, from the eternal snows of the Andes, where there was no witness but the all-seeing sun, there went up to God a cry of human despair. By millions, whole races and nations were remorselessly cut off. The Bishop of Chiapa affirms that more than fifteen millions where exterminated in his time. From Mexico and Peru a civilization that might have instructed Europe was crushed out."

The treasures of gold and silver with which Europe was deluged, at such cost of human life and happiness, agitated the civilized world to its deepest foundations, the populace went wild at once with a lust of gold and the love of adventure.—

In 1545, only twelve years after the treacherous massacre of the last of the Incas of Peru, by Pizarro, the mines of Potosi were hit on hy a poor herdsman, and from the comparatively narrow area occupied by one isolated mountain at an elevation greater than that of the highest peak of the Sierra Nevada, more than a thousand million of dollars have been obtained with the rudest processes and the most reckless working. The whole territory under Spanish dominion, including New Spain or Mexico, is believed to have produced, up to the begining of the present century, between five and six thousand millions of dollars. In the year 1571, the process of amalgamation was introduced; but most of the quicksilver used was brought from Spain, so that, in reality, there was hut little mining anywhere under Spanish dominion, except for gold and silver. The ores of all the other metals have been long known to be more or less widely disseminated through the Cordilleras, hut none of the less valuable ones were worked until a quite recent epoch.

It will be observed that the great deluge of the precious metals which inundated Europe did not, in any part, come from territory now helonging to the United States. It was not until nearly a century after the discovery of the Potosi mines, that a few colonists set foot on the barren and emphatically non-metalliferous shores of New England. Mining formed no part of the object of these men; and, if it had, surely they could not have come to a worse region in which to carry it on. Through the whole of the early period of our national history, mining remained the least attended to of all hranches of industry. Indeed, up to the commencement of the present century, the amount of the metals raised, whether of those styled precious or any other, within our borders, had been so small as to he quite unworthy of notice.

As early as 1650, the Governor of Connecticut had initiated the prospecting husiness in this country, in the vicinity of Haddam and Middletown, on the Connecticut river; but the practical results were of no consequence. As far back as 1659, the Jesuit Fathers, with that wonderful energy for which their order has been so distinguished, were laboring among the Indians on the shores of Lake Superior, and of course did not fail to notice the masses of native copper, scattered over the country; but it was almost two hundred years after their accounts of the occurrence of this metal, in that almost inaccessible region, were published, before any mining operations were commenced which led to permanent results. But it is a most curious fact, that long previous to any time of which there is a historic record, and, as it would appear from various circumstances, not less than a thousand years ago, and perhaps much more, the whole region of Lake Superior and even the remote islands on the north shore of that lake were mined over, in literally thousands of places, shafts sunk in solid rock to the depth of over fifty feet, without the aid of steel or gunpowder, and masses of copper raised of several tons in weight. I believe that there has never yet been discovered an important vein in that region, on which some work had not been done by these ancient miners, of whose origin and disappearance nothing is definitely known.

Early in the 18th century, Le Sueur, a Frenchman, explored the valley of the Upper Mississippi. Like many another searcher after metals, he imagined that he had discovered mountains of metallic ores, and actually brought a cargo of what he supposed to be copper down to New Orleans; but as there was really nothing of the kind in the region he explored; and as, if there had been, it could have been of no value in those days, his labors came to nought. Although history makes no mention of the fact, Le Sueur may have lent his breath to blow up the prodigious bubble which the French originated some 20 years later, called the "Company of the West,"

and which was perhaps the boldest and most visionary of all the great humbugs ever started. It was based upon the presumed existence of the precious metals in the Mississippi Valley, a region rather more destitute of them than any other portion of the earth of equal size. The only metallic ore found in any considerable quantity by the miners and explorers sent out by this company, was that of lead; but the few mines which had been started were abandoned, when the bubble bursted in Europe, as it soon did with a terrible crash, alarmingly destructive to all classes and both sexes of adventurers who had rushed blindly into the trap.

During the eighteenth century, occasional efforts were made to work mines of copper, lead, or other metals throughout the region now occupied by the Atlantic States; but little was accomplished. Some iron was made in Virginia and Massachusetts, the first iron-furnace in the United States having been erected in the last-named State in 1702; but as long as we were colonies, Great Britain, in accordance with her usual colonial policy, prevented the growth of this business, destined afterwards to become of such immense importance.

The lead mines of the Northwest, especially those of Missouri, began to be worked just at the close of the last century; but it may be safely asserted that, in the way of the development of our mineral resources, nothing of importance had been accomplished until about the beginning of the 19th century.

Within the last fifty or sixty years, the United States has made prodigious strides towards the first position among nations as a producer and consumer of the metals; but the progress has been very irregular and spasmodic. Mining fevers have raged throughout the length and breadth of the land, and have been succeeded, like all attacks of high mania, by periods of depression. We have run through successively the lead, the copper, the gold, and now are perhaps a little past the crisis of the silver excitement.

Lead mining began in the Upper Mississippi and Missouri lead regions, early in the present century, and the mines reached their maximum productiveness in the years 1835 to 1845, during which period from 25,000 to 30,000 tons of the metal were produced annually.

In 1845, our mines produced about the same amount of lead as those of Spain, and England about as much as the United States and Spain together, and these three countries fully nine-tenths of the whole produce of the world in this metal. Thus lead was the first metal with which we began to make a figure in the commerce of the world; but, unfortunately, our mines, as well as those of Spain, are not founded on permanent veins, so that our produce has been falling off within the last few years, and England now produces about half the lead of the world, which is fully 150,000 tons.

In copper we did but little or nothing until the opening of the Lake Superior mines, where the first blow was struck in 1845, and which was the only cupriferous district in the United States, of any importance, until California began to work her deposits of the ores of this metal.

In 1853, Cornwall and Chili together produced one-half of the copper consumed in the world, the grand total of the yield of that metal being about 56,000 tons. The other half was made up of small amounts from nearly every country in Europe, as well as from Cuba and Australia. During the last ten years the consumption of copper has been steadily increasing, and must now be fully 70,000 tons per annum; but in the case of this metal, more than any other, the grand total is made up of items from all parts of the civilized world, as its ores are, next to those of iron, most widely and universally distributed.

But there is another metal of much greater importance than either of those yet mentioned, and of which our production had been steadily increasing since the beginning of the present century; so that, at the time the Lake Superior region was opened, we stood only second to Great Britain in the amount furnished to commerce. I mean iron—which is emphatically the metal of civilization and the arts.

Of iron, we produced in 1845 about half a million of tons per annum, and now probably about a million, which is one-seventh of the product of the world at the present time. England, as usual, comes in for the lion's share—namely, one-half, or four millions of tons; and when we add that this immense production of iron is accompanied by a correspondingly enormous yield of mineral coal, or no less than 90,000,000 of tons per annum, we need not ask any further questions why England rules the sea, and a considerable portion of the dry land. It may be consoling to the pride of an American, however, to reflect that, according to the highest authority, namely that of the President of the British Association, as enunciated at its last September meeting, the best coal mines of Great Britain will be exhausted in less than 200 years if they continue to be worked as they have been for the last few years; and as the area of our coal fields is believed to be from 20 to 40 times as great as that of Great Britain, those who can have the patience to wait a couple of hundred years will probably have the satisfaction of seeing some remarkable changes in trade and commerce in favor of our side of the Atlantic, especially as our stores of iron ore, laid away in the mountains in nearly every State of the Union, are ampler than any other known to exist in the world.

The great secret of England's unrivalled prosperity in manufactures and commerce, lies in the proximity of their coal and their iron to each other, and the consequent cheapness with which both can be raised—both often from the same pit; but our disadvantage is partly compensated by the superior quality of our ore, especially of that of Lake Superior and Missouri, where it exists in what may, without exaggeration, be called mountain masses.

A new epoch in the history of mining, not only of the United States, but of the world, dates from the beginning of the gold excitement, which originated in California in 1848. I do not say from the discovery of gold in California, for although it is true that the finding of the precious metal at Coloma, on the South Fork of the American river, was the electric spark which flashed a golden light all over the world, yet it is not the less the fact that gold had been regularly obtained by washing, and even by quartz mining, as early as 1843.

It may seem strange that this should have been so; that years should have rolled by without any attention having been called to these facts; and that then suddenly all civilization should be so profoundly affected by a circumstance so nearly akin to those which had preceded without causing the slightest commotion. But the history of the world has shown again and again that every great discovery must be brought forward, under just the right conditions and circumstances, before it will come into general, practical application. Thus, to illustrate from the application of science to the wants and uses of everyday life, it was known for years and years before the electro-magnetic telegraph began to be universally used, that the problem of conveying intelligence by this agency could be easily solved—nay, more, that it had been; but it required time, place and opportunity before the spark could catch the tinder of the popular mind.

Look at the introduction of railroads. It took 200 years of preparation to bring about the condition of things which should result in the universal acknowledgement of civilized nations, that an entire change must take place in our modes of conveyance—a change affecting most deeply civilization and progress throughout the world.

For 200 years the idea of transportation on rails or bars laid on the ground, instead of on our common roads, germinated and vegetated, and who can say how or why it was that it all of a sudden became a matter of conviction to every mind that the railway was to be the great means of conveyance for all future time?

Be this as it may, it is certain that the year 1848 was one of the great epochs of the human race, for it marked the commencement of a new era in the history of mining throughout the world; the network of discoveries spread in every direction, from California as a centre, until a large portion of the world was embraced in its folds. Of the effects on the commerce of the world, the spread of empire and the march of civilization, of these developments of mining resources which have been almost constantly taking place since 1848, it is hardly possible, in a few words, to convey any adequate idea. What the silver crusade of the Spanish nation was in the sixteenth century, has been repeated, under a golden banner, by the Anglo-Saxon nationalities in the nineteenth.

For, most strange to say, the great gold discoveries of the past fifteen years have, in vastly the greater proportion, been on the soil of the former or present colonies of Great Britain. First California, then New South Wales, then Victoria, then British Columbia, then New Zealand, and now Nova Scotia has put in its claim as a gold-producing country. England at first, more than our own country, felt the beneficial effects of these discoveries, for millions of human beings, who before seemed to have nothing to look forward to but the work-house and the pauper's grave, had now an opportunity given them to escape from these horrors to happy homes in distant and previously unexplored solitudes. And let not the words "workhouse" and "pauper's grave" be reckoned an American exaggeration—they are not my own, but those of a British writer on this subject.

The influences thus felt in England reacted most powerfully on the United States, for the raising of wages there enabled us to compete with that country in various branches of manufactures, which could not be done before, as our laboring classes were not reduced by density of population and other causes to work on starvation wages. Besides this, the demand for breadstuffs, which the great Mississippi Valley could supply in unlimited quantity, gave an immense impetus to the growth and prosperity of that region, furnished the money with which the whole western country was covered by a net-work of railroads, and brought relief to the Prairie States, which seemed, before, likely to be choked by their own luxuriant fertility of growth.

Probably there is no one here present who has not some conception of what a mine is, although it is to be feared that a good many may approach in the crudeness of their ideas the Western man, whom I once heard laying down the law on the subject of mining, after this wise: "What's a mine but a hole in the ground, and can't any fool make a hole in the ground?" But I believe this same individual found to his cost that although one fool might make a hole in the ground, a good deal of another fool's money must be expended in the operation.

There is certainly no doubt that a large proportion of the mining within a thousand miles of this city has been done on what may be called the "hole-in-the-ground" principle, the results of which are visible in the shape of one small excavation in the rock and another large hole in the pocket.

I am not now speaking of placer or hydraulic mining—mining as we term it, but which in other languages is not called by this name—the term mining being properly applied only to working in the solid rock.

Vein mining, as it is called in the English language, or mining proper, is a very complicated matter, and to be carried on successfully, in a permanent way, demands no small amount of scientific knowledge and mechanical skill.

Deposits of metalliferous matter in the earth's crust are very diverse in their form; but they usually occur filling fissures or cracks in the rocky strata, accompanied by a large amount of peculiar earthy minerals, different from the wall-rock or "casing," as it is frequently called in California: the fissure thus filled, is called a *vein* or *lode*, of which the word "lead" is a corruption; the earthy or non-metalliferous matter is the *gangue* or vein stone, and the valuable metalliferous portion the *ore*.

As veins usually occur in rocks which belong to what geologists call the metamorphic series, that is to say, rocks which have been turned up on edge, and more or less altered from their original character by chemical and mechanical ageucies, it follows that these veins are themselves generally found dipping at a high angle, or even standing just vertical, so that to remove their valuable contents, work must be caried on down to hundreds or thousands of feet below the surface. To do this safely and economically, requires much skill and judgment in the arrangement of the excavations, so that a large number of men may have the necessary space in which to work without danger, and be supplied with fresh air, heavy and expensive timbering being often required to support the rocks so as to prevent their crushing in upon the miner. Besides this, machinery, frequently complicated and always expensive, is necessary for raising the ore, pumping out the water, and in very deep mines, to raise and lower the men, and thus save the great loss of time and strength which would otherwise be expended in climbing up and down thousands of feet of ladders.

Then the ore when raised has to be prepared for the market: *dressed*, that is to say, separated from the earthy and valueless mineral matter with which it is mechanically mixed, and *smelted* or *amalgamated*, so as to isolate the valuable metal from its chemical combination with the sulphur, oxygen, antimony or other "mineralizers," as these substances are called which usually occur combined with the metal itself, masking its properties and rendering it useless until separated from them.

Thus, mining and metallurgy become a very complicated business, and one in which it is easier to throw away money than perhaps any other.

But it is the mode of occurrence of the metals and ores, which are the objects of mining research, that makes the business of mining so uncertain, and at the same time so attractive. Traditions of all the great fortunes which have ever been made by lucky hits in mining seem to be forever floating in the air, and to be breathed in by the miner, until they become a part of his very being.

The business is sufficiently uncertain even in an old and thoroughly explored region; but in a new country, excitement becomes delirium, and there is nothing too improbable to find plenty of believers.

It is a fact, that extremely few metalliferous veins are equally rich for any considerable distance, either lengthwise or up and down; the valuable portions of the ore are concentrated in masses which are frequently very limited in extent, compared with the

mass of the vein, in which they are contained.

It is a fact, that indications of valuable ores on the surface do not always, nor once in a hundred times, lead to masses of ore beneath the surface of a sufficient extent and purity to be worked with profit. There are, literally and truly, thousands of places in New England where ores of the metal, including silver, copper, tin, lead, zinc, cobalt and nickel have been observed; many of these have given rise to mining excitements, and have been taken up, worked for a time, abandoned, taken up again, abandoned again, off and on for the last fifty or even a hundred years, and always with partial, and usually with a total loss of the money invested. There may be one solitary mine in Vermont which is paying a small profit to the shareholders; but with the exception of this, and a few mines of iron-ore on the border of Massachusetts and Connecticut, there is not one which has not cruelly burned the fingers of those who have meddled with them.

Even on Lake Superior, that region which is commonly appealed to as made up of solid copper, there have been many hundreds of companies formed, and at least a hundred mines opened and worked more or less extensively; but for ten years after mining had begun to be actively carried on there, only two of the mines had paid back to the stockholders one cent of dividend. Even in England, it is the opinion of Mr. Hunt, the Keeper of Mining Records, who has devoted many years to the investigation of the statistics of this branch of the nation's wealth, that mining for the metallic minerals, with the exception of iron, is not on the whole remunerative. There is a wonderful fascination about the mining business, which seems to blind the eyes and bewilder the senses of those who come within the sphere of its influence. The organ of hope seems to swell up and predominate over all the others:—what phantasmagoria will men not follow, if there is any metallic lustre about it!

How many a man will buy and sell stock in a mine, knowing nothing of its position, nature or value, who would be considered by his friends a fit candidate for Stockton or San Quentin if he transacted any other business in the same way.

Some, if not many, persons seem to think that rash and foolish investments in mining may be unfortunate for the individual; but that the State or community is no sufferer thereby: that what is one person's loss is another's gain, and that no harm is done provided the money is expended in the country.

It will however, require but little reflection to satisfy any reasonable mind that this is an egregious error. If foreign capitalists could be induced to send money to this State to be expended in some way, in which nothing of value should be accomplished, and no returns received for the money invested, as for instance in quarrying away and smoothing off the crest of the Sierra Nevada, an undertaking which would come as near as any one I can think of, to requiring an eternity of time and an infinity of means, no doubt there would be a certain degree of prosperity resulting to the State from the enterprise, inasmuch as labor, materials and provisions would be consumed, and the State thus be the gainer through the loss of others.

But although outsiders might embark in an undertaking as foolish as the one I have just suggested, we have no reason to suppose their eyes would not be soon opened to the absurdity of the thing, and when we should come to putting *our own* capital into the work, we should soon find that we were exhausting our resources just in proportion to the amount we were expending; and that for any permanent benefit which would accrue to the State, the money might as well have been thrown into the Pacific Ocean.

If the California capital which has been wasted in foolish mining enterprises in this State and on its borders during the past three years would, as I fully believe, have paid for a railroad to Washoe; then California is the poorer by a railroad to Washoe, with double track and rolling stock complete, than it would have been, had not recklessness and ignorance diverted capital from this great enterprise.

It is because of the uncertainty of mining operations, that this branch of industry, in highly civilized countries, has been taken under the peculiar care and watch of the government.

In France, no mine can be opened without permission from the Department of State charged with the supervision of mining affairs; and, if permission is given and the work commenced, it is done under the inspection and with the advice of skillful mining engineers, graduates of the Imperial School of Mines, who are charged to see that no wasteful expenditures are made, no loss of life caused by ignorance or haste and no imposition practised on the public by false representations of what is going on.

In Germany, government mining schools are established, furnishing free instruction to those who wish to fit themselves thoroughly for the practice of this profession; aid is furnished from the public purse to carry on great enterprises which have for their object the development of mineral resources; and many veins are worked at the expense of the State, for the benefit of the people, where the strictest economy and the highest skill are required to make the receipts balance the expenditures. The result of all this is, that in these countries the fullest possible benefit is derived from their national resources in this department, the miners are more intelligent and comfortable, in proportion to the average intelligence and comfort of the people, than they are in other States: and, most of all, that terrible waste of life and money which characterizes ignorant mining, is prevented.

Even in England, that country which is more richly endowed with mineral and metallic treasures than any other region on the globe of equal area, and where it used to be supposed that the mining interest could shift for itself, experience has finally demonstrated to the satisfaction of all thinking men, that much could be done by government aid and inspection, by the establishment of mining schools, by the collection of statistics, and the carrying on of the most perfect and elaborate geological surveys.

Says one of the highest authorities on these subjects in England, "I am assured that money will continue to be squandered in lavish expenditure on mines that are unworthy of trial; that wealth will be wasted through the errors of ignorance; that dreadful casualties will continue to horrify us; and that the miner will perish ere yet he has reached the number of his days; until we have crushed out that dark ignorance which spreads over all like a fungus, and have planted in its place some of the seeds from the tree of knowledge." And if this be true in England, with her centuries of experience, superabundance of capital, and certainly not inferior supply of good common sense, what shall we say of some other countries and regions, which are just about entering on the development of their mining resources, without any experience, without an overflowing amount of capital, and with no special advantages, other than those which Nature has so bountifully supplied.

By a singular coincidence, it has happened that two great offshoots of the English stock have been planted, nearly at the same time, and under closely resembling circumstances. In geographical position, they are the very antipodes of each other; but in all else, wonderfully alike. I refer, of course, to the region of the Pacific slope of the United States and the English colonies in Australia, especially that of Victoria.

California had three years the start of Victoria; and it was through the discoveries of a returned Californian miner that the gold deposits of the latter region were opened to the world.

In the amount of their production of the precious metal, which is the great staple commodity of both countries, there is no very great difference; but, although it may not be very pleasing to our State pride to have to confess it, there is pretty good reason to believe that our cousins at the Antipodes have outstripped us in all that relates to the development of their resources and the substantial improvement of the country.

Melbourne, which is the San Francisco of the antipodal gold regions, is twice the size of our metropolis. She has 350 miles of railroad leading out into the country, which have cost $175,000 a mile to build. The Victorian gold fields are said to be models of industry, order, and sobriety. There are several interior towns, having a population of from 20,000 to 30,000, and well built of stone and brick, with public buildings, both substantial and elegant. The town of Ballarat, for instance, has 5,000 stone, brick and wooden houses, nine banks, all handsome stone buildings, a large and elegant hospital, a mechanics' institute and reading room, a court-house, town-hall, three theaters and two daily newspapers. Where is the interior mining town on this coast of which as much can be said?

Certainly there is no reason to believe, as far as one can judge from published documents, that Australia is superior to California in natural advantages. Our mineral deposits seem even to be more varied and extensive than theirs, and our agricultural capacity fully as great; indeed, in many respects, there is a striking resemblance between the two countries in climate and other circumstances which determine the nature and amount of the produce of the soil.

In casting about to find out what could be the cause of the greater advance of the colony of Victoria, I could find no reason which seemed so likely to be the true one, as the pains taken by the Government to bring the lights of science to bear on the settlement of all questions connected with the security and welfare of the miner, and the admirable regulations which have been established in connection with the disposal of the government mineral lands, and for the settlement of conflicting claims among the miners. This is not the place nor the time to go into these regulations in detail; but I may, perhaps, be considered as taking no unfair advantage of the present opportunity, when I state that a thorough geological survey has been going on there for the past ten years. Undoubtedly there are several points on which we might receive instruction from the experience of our antipodal cousins, if we could once make up our minds that we did not know everything already.

Placer mining had been prosecuted pretty steadily in California, with the exception of occasional furious rushes of a portion of the population of the State to supposed new districts, as to Fraser river, for instance, in 1858; and auriferous quartz mining had made some progress towards stability up to the year 1859. But, with the exception of the quicksilver mine at New Almaden, nothing had up to that time been done towards developing the other metalliferous deposits which were supposed to exist in the State, of which little, however, was definitely known. In that year, the discovery of the Comstock lode gave a new impetus to mining on the Pacific coast, and formed indeed an era in the mining history of the whole country.

Here, in San Francisco, it is needless to speak of the excitement which followed the Washoe discovery, for we are in the midst of it now, and only those who have been in it can realize the rapidity and the recklessness with which, one after the other, new mining regions were opened on the other side of the Sierra, and how the State of California seemed almost about to be drained to the last man by the rush of the people over the mountains, deprived of its mining machinery by the stampede of stamp-heads, and of its capital by the all-pervading mania for "feet."

The great discoveries which have so agitated California and the adjacent territories during the last three years, are on the same great metalliferous belt of which we have before spoken, as extending from the extreme southern end of South America to the Arctic Sea. For 300 years the Spanish-American race has had the opportunity of showing what it could do with the immense resources placed at its disposal in the mountain chains of Chili, Peru, Bolivia, New Grenada, Central America and Mexico; and what a picture of wretchedness, ignorance and semi-barbarism do these countries present at the present time! At the very height of its yield of the precious metals, the whole mining region of Peru might have been pointed out as the place where the greatest amount of misery was compressed into the smallest space. As the net result of the winning of hundreds of millions of treasure, nothing could be shown but a region not half worked out, but so devastated and ruined by reckless mining as to be rendered forever worthless, and the bones of the wretches whose lives were sacrificed to quench the insatiable thirst for gold, which was the one mad passion impelling all to a common ruin.

Nor in Mexico was it much better in the early days; neither has the introduction of English capital during the past thirty or forty years done much to raise the standard of moral or intellectual development in that country. When we consider its geographical position, rich mineral resources, its delightful climate, and the fertility of its soil, it would seem as if there, if anywhere, progress should have been made towards the highest civilization which the human race is capable of. But how different the reality! Up to the present time it can hardly be said that any one of the Spanish-American States ranged along the mineral belt of the Cordilleras, shows a much higher degree of civilization than did the unfortunate aborigines who perished by millions to make way for the foreign invader. Here and there are feeble, glimmering lights, foci of scientific development always seeming as if just about to be submerged in the advancing tide of superstition and ignorance. But how little has been added to the sum of human improvement, in any department, whether of art, science or literature, within the 300 years that have elapsed since these States were opened to European civilization?

History teaches us, very plainly, that the amount of the precious metals mined in any country affords no clue to its prosperity, if by this term we mean permanent welfare and happiness of the people, and progress in the arts of civilization.

The career of Spain was a downward one from the time she began to be deluged with the treasures of her American colonies. Degraded from her proud position among nations, a mere skeleton of what she once was, stripped of nearly all her colonies, she remained a by-word and reproach among nations, until, thrown upon her own resources, she began to develop those, in doing which she is now rising gradually from her former state of decadence. What will be the future of the immense mining region com-

prised within the limits of the United States, which the explorations of the past three or four years have shown to exist, is a question pregnant with interest. That the wealth of the world will be added to immensely by the mining operations, which can be hardly yet said to have begun in the vast territory comprised between the Rocky Mountains and the Pacific, cannot be doubted. But what will be the moral and intellectual status of the people who are to inhabit this territory; what their position in relation to civilization and progress? These are momentous questions, and questions to which it is not easy to give an answer. But we can avail ourselves of the experience of the past to learn what is our duty for the future, and whither our efforts should be directed, if our aspirations tend to anything beyond the mere satisfaction of the lower instincts of our natures.

No State can attain great wealth unless it develops its resources in more than one branch of human industry; and without wealth there cannot be a high degree of civilization, although it does not necessarily follow that with wealth there must be civilization. A steady stream of the precious metals, of immense volume, has been flowing into Asia from the west, until thousands of millions have been absorbed; but, as for any permanently civilizing effect it has produced, it might nearly as well have been hidden in the ground, where, indeed, a large portion of it undoubtedly is. Wealth, to produce a civilizing effect, must be skillfully and intelligently used. Mining, agriculture, manufactures and commerce must all be sustained and fostered on this coast, if we expect to take a high rank as a State; and the full and harmonious development of our resources is dependent on a corresponding degree of moral and intellectual development of the people, for ignorance and vice cannot co-exist with national prosperity.

The Government of the United States has always been singularly unfortunate, to use the mildest possible expression, when it has attempted to meddle with mining matters. There has never been any special bureau for this department of our national interests, and what has been done has been done by those who have had no practical acquaintance with this branch of applied science.

In the first place, our census reports, lamentably deficient and imperfect as they are in so many other respects, become positively ludicrous when they touch on mining statistics.

To illustrate this statement, we have only to refer to the very last census, to see what confusion is made with the whole subject of mining statistics. In what professes to be a tabular statement of the yield of the mines in the United States, the number of tons of ore raised is given, although really without any approach to accuracy; but the worst feature of the table is, that no clue is furnished to the per centage of metal contained in the ore, so that we are in reality as much enlightened on the whole subject as we should be in getting at the value of the property in San Francisco, if the Assessor's returns were made out in pieces of money, without stating whether five-cent or twenty-dollar pieces were intended. Worse than this, the superintendent of the census indulges in considerable glorification in regard to the number of pounds of iron produced in the United States, as related to the number of the population. By his figures he makes out that ninety-two pounds of iron are produced for each inhabitant. This result he obtains by adding the amount of pig iron produced to that of bar and rolled iron, not knowing that the first is the raw material from which other is made—making as egregious an error, as he would do who should attempt to estimate the amount of beef consumed in San Francisco, and base some very sage and highly philosophical conclusions on his results, when they were obtained by adding the weight of all the cattle brought to the city to that of the beef produced by their slaughtering.

These are only specimens of Washington wisdom as applied to mining matters; but if the Superintendent of the last census made such a botch of his work, what shall we say of what has been done in another bureau of the Department of the Interior? The Commissioner of the General Land Office, in his last year's report to the Secretary of the Interior, takes up the subject of the mineral lands of the United States, and, in order to show that California ought to be only too happy to pay those little war bills which are running up at the rate of a thousand millions or so per annum, he makes certain statements with regard to the richness and extent of the deposits of the precious and other metals in the United States, in comparison with which the travels of Munchausen appear to be the most sober and prosaic history.

But, unfortunately, the Commissioner forgets that, if, as he appears to conceive, solid gold and silver constitute the basis on which the Cordilleras of North America are built up, these metals will soon cease to have any value at all, as compared with iron, for instance, for neither of them has the qualities which are essentially necessary to adapt them for universal use in manufactures and the arts, and thus to enable them to take the place which that metal now holds. If the Commissioner's ideas and figures are correct, for he gives the figures, which we know never lie, we should produce in one year about six times as much as the whole yield of the American Continent from its discovery up to the present time, or say the round sum of $30,000,000,000 per annum (it will not be necessary to mind the odd dollars and cents), and this before getting into the productive ground, which we shall strike *"when a sufficient depth shall have been reached!"* Well, the most remarkable thing of all in this connection was, that a California U. S. Senator brought forward a bill to appropriate a considerable sum of money for the purpose of enabling the General Land Office to collect further statistics of the mineral interests of the country! Probably Congress thought that enough had been done in this particular style of research, for the bill never passed either branch.

Congress has, at various times, tried very hard to dispose of the vexed question of how to get a revenue out of the mineral lands of the United States. In the lead region of Wisconsin, and the copper lands of Lake Superior, the system of leasing was tried, and in each case proved a signal failure.

When the Lake Superior region was first opened, the mineral lands were leased out in tracts three miles square, under authority of the War Department, probably under the idea that mining and fighting go hand in hand in new mineral districts. The absurdity of this arrangement, under which a few political characters might soon have obtained possession of the whole region, was soon discovered; and Congress finally ordered the lands to be sold, exactly the same thing having been previously done with the lead-bearing country in the Upper Mississippi Valley.

While every one will admit that the present condition of title to mineral claims in California and the adjacent Territories is a terrible draw-back to the prosperity of the Pacific coast; and while there are many indications that something will be done in the matter before long, there is great reason to fear that the Government may be led to taking some steps which will inflict a greater injury upon us than our present condition does. Any legislation based on the idea that solid gold and silver are to be reached "at a sufficient depth," as the honorable Land Commissioner seems to believe, will be pretty certain to result in disaster to the State and "confusion worse confounded" to the General Government.

It seems to me that the establishment of a joint commission, on the part of the State and the United States, to investigate the question of the disposal of the mineral lands, or of lands in the mineral region, would be the best method of shedding light on this exceedingly difficult question, and preparing the way for future action. The subject should be studied in all its bearings, and a plan proposed, embodying the results of a full legal and scientific investigation of the question, which should be urged upon Congress for adoption.

There is little doubt that, by this course, a long stride might be made towards that condition of stability which California and the adjacent Territories so much need.

But it is not from Congressional action alone that help must come; our own shoulders must be put to the wheel. We must act as a State through the Legislature, and as individuals—act vigorously and efficiently, but perseveringly—planning wisely for the future, and remembering that no great and good thing was ever accomplished without time and labor.

There are many subjects to which I might direct your attention as demanding the consideration of all thinking men in this connection; but I will only throw out a few hints in regard to one or two of these, lest I should be considered as preaching rather than lecturing, and thus be usurping the privileges of the eloquent gentleman, to the music of whose voice you will have the privilege of listening in continuation of this course.

The last Legislature took a step, which may prove to have been an important one, towards setting in motion an Institution which shall have an enduring influence on the welfare of California. A Board of Commissioners was instituted, to report to the present Legislature on the feasibility of establishing a State University, and consolidating therewith schools of agriculture and mining and the State museum. This Board consisted of the State Geologist, the Surveyor General, and the Superintendent of Public Instruction. After a careful consideration of the whole matter, the Commissioners have prepared a full report, which is now in the hands of the State Printer, and which will soon come up for action before the Legislature itself.

Believing as I do that this report brings forward a subject of great importance to California, and to San Francisco particularly, and knowing that its recommendations cannot be carried out without the co-operation of the people of this city, I take this occasion to bring the matter before you for consideration.

Under the Act of Congress, approved July 2nd, 1862, California is entitled to 150,000 acres of land for the establishment of a School of Agriculture and the Mechanic Arts; and, by a previous Act, the State has also received a grant of 46,080 acres for the use of a State University, or "Seminary of Learning," as it is called in the Act itself. The State accepted the latter grant, sold the land and has received part of the proceeds, and is receiving the interest on the balance. In her constitution she has assumed the obligation of properly using this money, and of taking active steps for the encouragement of literature, the arts and sciences. But, although fifteen years have elapsed since this obligation was entered into, nothing has been done towards establishing the State University, indeed, so careless have our officials at Sacramento been; the principal portion of the University money has been paid into the School Fund; and when the Legislature passed an Act, some three or four years ago, to remedy this state of things and gave precise directions as to what was to be done for that purpose, the officers entrusted with the performance of that duty never paid the slightest regard to the act, and have never been called to account for this negligence.

After calling the attention of the Legislature to these facts, the Commissioners, in their Report, go pretty fully into a consideration of the system of American educational institutions, from the common school to the university and professional school; and, after a thorough examination of the wants and means of the State of California in reference to a system of higher education, arrive at the following conclusion:

1st. That there is no provision in the Congressional Acts granting lands to the State and nothing in the Constitution of the State itself which particularly defines the character of the proposed institution, and that therefore the Legislature is free to act in the matter within very wide limits.

2nd. That the interests of the State require the consolidation of the grants of land for a University and for an Agricultural and Mechanic Arts School, so that both these shall be part of one Institution.

3d. That it is not advisable, at present at least, to organize a Collegiate Department in connection with the proposed institution.

4th. That the Institution required by the State, and which will be best adapted to the wants of the people of the Pacific Coast, is a School of Practical Science, or a Polytechnic School, meaning thereby an institution where the elements of the exact and natural sciences, will be taught, and their practical application to the wants of every day life as to Mechanics, Mining, Manufactures, and Agriculture.

5th. That the collection of the State Geological Survey should be eventually made over to the State University or Polytechnic School, or the institution organized for the purpose of higher education, whatever its name may be, and that the interest of the State demand that these collections should be placed in a fire-proof building which may be called the "State Museum" and where they will be accessible for the purpose of instuction not only to the student, but to the general public.

This institution the Commissioners recommended to be located at San Francisco, as the richest, most populous, and most central city on the Pacific Coast.

I do not consider it necessary to go into any arguments to prove the importance of such an institution, as the one contemplated by the Commissioners, to the State of California; nor do I think it necessary to show that no institution of this kind can succeed, without buildings, library, laboratory and collections and without an endowment. I have never yet seen a pyramid of any magnitude built, by beginning at the little end. Hence I have advocated, and still do advocate, the combination of State, city, and individual resources, believing that even then, it will require a strong effort to put in motion an institution which will really be of credit and value to the State.

The amount of money required to be raised by the City is not large, and added to that now in the State Treasury, and applicable to this purpose, will be sufficient to make a creditable beginning; so that San Francisco might, in less than two years, see an elegant building erected here, in which shall be displayed a large collection of objects in all departments of Geology and Natural History, which shall not only exhibit the wealth and resources of this State; but serve as the most valuable means of education for the people.

The publication of the Geological Survey, of which it is expected that three or four large and elegantly

illustrated volumes will appear, before the next session of the Legislature opens, will serve as a guide and key to these collections, and will, as it is believed, be sufficient to answer the question so often raised, especially by the newspapers of this city, as to whether our work was anything more than a sham.

But time forbids my pursuing these topics any farther. No one can feel a greater desire than I do to see this state attain the highest possible degree of civilization, and I look to the Mechanics' Institute as one of the means by which this is to be brought about.

Those who seek new regions take upon themselves new responsibilities, and are willing to meet and able to overcome greater difficulties, than those who cling more closely to the homes of their fathers. The greater the obstacles to be overcome, the greater the triumph of overcoming them.

A Heavy Casting.—We witnessed, on Saturday afternoon last, at what is said to have been the heaviest casting ever made on the Pacific coast. The cast was that of an enormous pinion wheel for the San Francisco Water Works Company, and was made at the Pacific Foundry. The diameter of this wheel is 9½ feet, with 16-inch face and a very heavy center or "hub"—the whole weighing between six and seven tons. To make this casting, upwards of eight tons of iron were smelted in two furnaces. The molten iron from these furnaces was drawn off, as fast as it came down, into a huge pot, holding about a ton, which, as fast as filled, was carried by a heavy crane to the opposite side of the foundry and emptied into a reservoir. The molten mass was thus accumulated until the requisite quantity was obtained, when a small gate, at the bottom of the reservoir, was opened, and the melted iron suffered to rush out, and along a prepared sluiceway, into the mould prepared for its reception. The melting of the iron in the furnaces occupied just 50 minutes, and the accumulated mass from the reservoir was run into the mould in 2½ minutes. The operation was witnessed by quite a number of gentlemen who had been attracted thither by the interest attendant upon so important a piece of work. The casting was a most complete success and reflects much credit upon the enterprise and energy of the proprietors of this extensive foundry.

We would take occasion, in this connection, to mention that the Pacific Foundry has recently made extensive additions to their shop room, by the erection of a brick building 165 feet long by 60 wide, which, in addition to their previous buildings, runs entirely through from First to Fremont street. They are also putting in a new and larger engine for driving their works. Other important improvements in the way of buildings, additional working facilities, machinery, tools, etc., are in progress, which, when completed, will render this a first class establishment, and fully equal in extent and facilities to any other in this city.

California Coal *vs* Anthracite.—We notice a lament on the part of our foundrymen over the cost ($35 per ton) of Lehigh (anthracite) coal. We commend the following statement to their attention:—Forty years since it was a problem "How to burn anthracite;" yet iron was then worked in almost the same mode, as now. Again, a ton and a half of bituminous coal, at two-thirds the cost of the anthracite, contains, say as much carbon as a ton of Lehigh. It is obvious, therefore, that the problem now is, "How to burn our (California) coal." On the 3d of August last, we called attention to improvements in furnaces which should be capable of application here. Steel in France, glass in England, iron ores in Sweden and Spain, have already been worked with economy by the adoption of similar principles.

Prof. Whitney's Address.—A limited number of extra copies of the "Press" containing this address have been printed, which can be had at this office, and of the newsdealers generally. Persons in the interior, desiring copies, can have them forwarded by mail, on enclosing, by letter, four 3-cent stamps; on the reception of which, the paper will be promptly forwarded to the address which may be designated.

[Written for the Mining and Scientific Press.]

MINING GOSSIP.

EDITED BY FRANK WARDELL.

[In this department of the Mining and Scientific Press we propose to give various and brief accounts of mining companies, and shall, under all circumstances, write *plainly* respecting their merits and demerits; furthermore, we shall bring to light such transactions as may come within our knowledge regarding the "Bulling and Bearing" system and the "underground" actions of both Trustees and Brokers. We are vain enough to suppose, at all events, that we have the "inside track," and shall, without *hesitancy or fear*, give to the public, from time to time, a peep behind the scenes whenever the occasion justifies. If, in doing so, at any time we have fallen in error as to our report, and it can be so proven, nothing will afford us more pleasure than to make the "*amende honorable*" by correcting the same. We shall feel under obligations to those who are interested in stock if they will communicate to us such items as may come under their observations, and which will prove interesting to our readers. This department is open for free discussion to "one and all." Our object is to render justice to every one. Communications, in all cases, must contain the author's name and address to insure publication, which will be kept *strictly confidential*—otherwise no notice will be taken of them.]

Ophir Dividends—Liberality *vs.* Litigation.—If, in the settlement of the late extensive sales in Ophir dividends, which was cancelled by the purchaser paying to the broker of the seller their respective commissions, is to be considered, as it is by the majority of Brokers, an act of liberality, we would like to be enlightened as to what the term "liberality" means; and, furthermore, we would like to know what position the seller would be placed in if he had thought proper to hold the purchasers to their contracts, and afterwards been proven against the seller that he was well aware when disposing of the said dividends that there would be no dividend declared that month, from the very fact that if the balance of the trustees decided to declare one, he had the control in votes to defeat their object. Our readers will remember that there was no dividend declared, and much excitement prevailed at the time among outsiders and members of the different boards. So, to have no further trouble about the matter, it was formally fixed up as we have stated above; not, however, until one of the heaviest purchasers, not to be "duped" so easily, gave the seller to understand the exact position he (the seller) stood in, according to the proofs he had obtained, and, what is more, could substantiate. The report was that ten dollars, at the least calculation, could have been declared that month; but the seller of dividends could not "see it," or rather would not. Now we maintain that if this *pretended act of liberality* had not been tendered to the many victimized and deluded purchasers, it would have proven a serious affair to the "would be" shrewd operators in dividends, providing that our information is correct, which we have every reason to believe, coming from whence it does. We would like to ask where is this liberality?—where does it exist in this transaction? Did he not do only an act of compulsion to save his own reputation and a siege of litigation? Why, then, should he receive the praise that so many have accorded him? It was not our intention to refer to this unpleasant transaction again, but really it is so provoking to us to be continually hearing from day to day, upon the streets, about this wonderous act of generosity, and, as we consider these the true facts of the case, thus it is so we consider it our duty, as a public journal, to give the "why's and wherefore's" he was prompted to such an act. Another thing, we believe it is not customary among brokers and operators in stocks to let buyers off so readily when they have what they term "a good thing," and the right on their side to hold the buyer to the very letter of his contract. The idea of the seller doing this simply to "teach brokers and operators in stocks a lesson not to buy dividends," is, vulgarly speaking, "played out."

A Sharp Transaction.—We have been informed of a sharp transaction which took place a few days ago, between an extensive operator and holder in Savage stock and a well known French firm in this city; the particulars are these: The operator in Savage ascertained by some method that the firm in question had sold some property and the purchaser in part payment had paid some twenty-eight feet of Savage G. & S. M. Co. stock. In the meantime the operator received a letter stating that the Savage G. & S. M. Co. had struck it exceedingly rich, and that the indications were surprising, and, of course as soon as the information got on the street, up would go the stock, and now was the time for the operator to use his inventive faculties to procure the twenty-eight feet without arousing the suspicions of the holder, so off he started to the French firm, when the following conversation ensued. "Well! I hear you have some Savage," said the operator, "do you want to sell it?" "No sir," remarks the representative of the firm. "Then," said the operator, "do you wish to purchase some, if you do I will sell you a little for twenty-eight hundred dollars cash?" "Oh!" replied the representative, "I should think you would. I would sell mine for that price." No sooner were the words uttered than the operator cried out, "Sold! call at my office and get a check for the amount," and then left the bewildered representative of the firm, wondering why he was picked up so quickly. It did not take him very long to ascertain the news, and learn to his sorrow that he was a loser in profit on the rise of the stock, to the disagreeable tune of $14,000. Moral:—Always make inquiry before you place a price upon your stocks to anxious purchasers, and especially those who have the name of being posted.

Complimentary.—We notice among the list of passengers who took their departure for the East on the steamer St. Louis, Feb. 3d, the name of our much esteemed friend, Mr. James L. Pond, of the firm of Messrs. Chapin & Pond, Stock Brokers, of this city. Mr. Pond was the original discoverer and locator of the famous Pond mine. We learn that it is not his intention to remain away long. We wish for him a pleasant trip, and a speedy return to the "Golden State."

Pacific Board of Brokers.—The semi-annual election for officers of this Board took place on the 2d of February, when, after a spirited contest, the following gentlemen were declared elected: President, W. P. Deneka; Vice President, Wm. P. Dewey; Secretary, James H. Gager; Treasurer, W. H. Francis; Sergeant-at-Arms, Charles H. Watson.

What a Contrast!—On the morning of the 2d inst. a report was current on the streets to the effect that the Real del Monte mine had given out, and, furthermore, that it would prove just such another mine as the Wide West. This report was set in action by a certain clique of "stock sharpers," to frighten the timid ones to sell. It had its desired effect, by causing many to sell at low rates, while, of course, the "knowing ones" purchased extensively. On the evening of the same day, the Real del Monte Company received bullion to the value of $31,000, being the proceeds of *only* ten days work on this famous mine. This don't look as if this mine had "given out" in any other sense than in an abundant yield of bullion.

The Maxwell Creek Gold Mining Company have declared a dividend of one dollar per share, payable to-day.—*Evening Bulletin, Feb. 3d.*

Gracious heavens! can it really be possible that we have one more mine to place upon our list as a dividend-paying institution. Well done, thou good and faithful Maxwell mine, for, after six years working, thou hast seen fit to compensate thy sanguine owners with the immense sum of one dollar per share dividend. Wonderful! truly wonderful!

Lost.—The Chollar Mining Company have lost their lead, and they offer a liberal reward for the recovery of the same. Further particulars can be ascertained by application to the Trustees, or, in fact, to any of the unfortunate purchasers who bought into the mine, at figures ranging from $1,600 and upwards per share. A liberal reward will be paid promptly when (the public are) satisfied that it has been found. No questions asked.

Gem of the Sierras.—From six thousand and five hundred pounds of rock recently taken from this mine and crushed at Fall's mill, Unionville, five silver bricks were obtained, weighing in the aggregate, fifteen hundred and eighty seven ounces—value, $1,500. This speaks well for Humboldt.

[For the Mining and Scientific Press.]

THE MINERS' LABORATORY.

Assaying Copper Ores.

ASSAY OF COPPER ORES CONTAINING TIN, ARSENIO, LEAD AND BISMUTH—BASED UPON C. MOHR'S METHOD.

When ores contains the above substances, in addition to copper, as in the process described last week, pulverize the ore very fine, weigh out 25 grains of ore, very carefully, and place the ore in a small porcelain crucible, one that will hold about two and a half ounces of water, and instead of adding to it nitric and hydrochloric acid, add a mixture of equal quantities of nitric and sulphuric acids. Cover your crucible with a large watch crystal, and evaporate very slowly; when it is nearly dry, add a few drops more of the mixed acids, and repeat this operation when it is on the point of becoming dry, three or four times. Finally evaporate to dryness. Remove your watch crytal and heat the crucible and contents thoroughly, and continue it in that condition until the white fumes, you will observe going off, are completely driven off. Allow to cool now very gradually; remove from the sand on the stove. When sufficiently cold, add hot water, say one ounce; allow the whole to stand for about ten minutes. Add a little more water, filter, wash the residue on the filter, several times, with boiling water. To your clear solution add a few drops of hydrochloric acid; should a white curdy precipitate be formed, it is silver. Add then a few more drops of hydrocloric acid. Heat slowly. After the precipitate has settled down on the bottom of the beaker, add a few drops more of hydrochloric acid. If a precipitate is not formed, all the silver has been thrown down. Filter now; wash the precipitated silver on the filter, several times, with hot water. The filtered solution contains all the copper. Now immerse in this a piece of polished iron, and proceed as in the other assay.

SILVER MOUNTAIN.—A letter from an old friend gives us the following information from this imporant mining district:—The town is about one-quarter of a mile long and about one-sixteenth in width, situated between mountains from 6,000 to 7,000 feet in hight. The lots are fifty feet by eighty feet in depth and are well fenced. The old story of "feet plenty and money scarce" applies here, just now. There is no doubt existing among the settlers of Silver Mountain in regard to the general richness of their mines. Wood and water abound in plentiful supply. Two saw mills are already in operation, and two more will be completed in the Spring, with four or five quartz mills. We hope our hard working friend, who unsuspectingly furnished these items for our journal, will be abundantly rewarded for his toil in this new gold, silver and copper field of Amador county.

BALD EAGLE—CONSOLIDATED.—This is a California Incorporation. The company's mine is located on Gold Flat, near the city of Nevada, and in the immediate vicinity of the celebrated Sneath & Clay, one of the richest gold mines in the State. The Pittsburg mill and mines, now owned by Wickes & Co., are also in the same vicinity and all within a line of a few rods. The latter has been successfully worked for some twelve years, and is now paying better than ever. The rock in all three of these mines presents similar characteristics. The location is one with which we have long been familiar and we trust our friends of the "Bald Eagle," when they get *their* mine thoroughly opened, will find it equally as valuable as that of either of their neighbors. Mr. T. L. Bibbins is Secretary of the company. His office is in the new building at the corner of Montgomery and Pine streets, in this city.

A MINERS' HOSPITAL.—The establishment of a Miners' Hospital is among the measures now before the Nevada Territorial Legislature. An institution of this kind is greatly needed, both in that Territory and in California.

OWENSVILLE MINES.

At the upper crossing of Owens river, about forty miles above San Carlos, a new town has recently been laid out, called Owensville. This town bids fair to become the centre of a large and important mining region, which has already been divided off into four districts, as follows: Keys, White Mountain, Slate Mountain, and Lone Pine. These mines were first discovered in the White Mountain district, which was laid out and organized in the spring of 1861. The other three districts have been successfully organized during the past summer. This region includes several large and fertile valleys, covered with a luxuriant growth of native grass, and all susceptible of a very high state of cultivation. Bishop's Creek Valley, on the west side of the river, and directly opposite Owensville, is about ten miles square. It has already been sectionalized by the Government Survey, and is now fast filling up with settlers. Over one hundred quarter sections have been located within the past three months.

There is also a large tract of agricultral land in Deep Spring Valley, adjacent to the mines in the White Mountain district, and not yet occupied by settlers. Aurora and all the mining region known as Esmeralda, will soon derive its supplies of grain, hay and vegetables from Bishop's Creek Valley.

North of Bishop's Creek Valley, and some twenty miles from Owensville, there is a large forest of very superior timber, equal to anything in California. This track is about ten miles square, and will eventually become of great value. In fact, it already presents a fine opening for the employment of Capital. The first company which puts a saw mill into this timber will be sure to realize a fortune. There is already a saw mill on Big Pine Creek, about fifteen miles below Owensville, and the only one in all the region watered by the Owens river. This mill is scarcely able to supply the wants of its immediate vicinity. Lumber, here, is now worth the whip-sawing price—from $100 to $150 per 1,000 feet.

All the hills, in the valleys and about the mines, are covered with a sparse growth of Piñion, which affords a very good timber for fuel and mine timbering. Steam power will never be needed in any portion of this region, as an abundance of water power may be had from innumerable mountain streams, which abound everywhere, both in the agricultural and mining districts.

The mines are chiefly silver, carrying also much gold and copper, and are generally found in a slate formation. The veins are from two to twenty-five feet thick, with a northerly and southerly direction and but slightly inclined from a perpendicular. Mr. M. Page, an old prospector, well acquainted with this region, from whom we have obtained the above particulars, has left with us a large number of specimens from the different ledges, nearly all of which bear a strong resemblance to the Green Eyed Monster and Eclipse ledges, which are well known in this city, and which are located about forty miles to the south.

There are twenty-five houses already up and in process of erection at Owensville; in the immediate vicinity of which place there are now fully 400 inhabitants; and not less than 250 in the White Mountain and adjacent districts. Miners and agriculturalists are constantly going into this region, chiefly by way of Visalia and Keysville or Walker's Pass.

A new road will soon be opened from Millertown, *via* the head waters of the San Joaquin, which will intersect the Los Angeles road, at Owensville, reducing the distance to these mines, as at present traveled, fully 200 miles.

PICK SHARPENING MACHINE.—The Editor of the Grass Valley *National* has seen a machine for sharpening picks, the invention of an ingenious mechanic of that town. The machine, says the *National*, works well. If it does so, and economises time and labor, it is a valuable invention.

Esmeralda Correspondence.

ESMERALDA, Jan. 19th, 1864.

FRANK WARDDELL, ESQ:—In my last letter I gave you a passing description of the future prospects of Esmeralda, as it then appeared. Now, I will give you a few more items, or rather facts, from this place. When the Aurora and Sonora wagon road is completed, and from the fact that Aurora must be the diverging point to numerous other mining districts, including Owen's River Valley, and also on a direct line to Reese River, it is evident that this place must build itself a reputation, as standing not only as one of the highest cities in the world, geographically, but in richness and prosperity. Yet if we were to lay aside this advantage, and examine the mines as they are—and not like J. Ross Browne, in his "Peep at Washoe," by imagination only—but go over Silver, Last Chance, and Middle Hills, and through the principal mines that are being successfully worked at the present time, even the most absurd thinker would say that Aurora, with her mines alone, has a foundation for a city that will grow as if by magic, and stand as a bright emblem to the world for ages to come. The wheel of Time has again rolled over, and has already started on its next revolution. During the last two months it has been very dull here, and money has been scarce. Such is the case in nearly all places at the close of the year. But 1864 has changed the aspect of things. The three principal mills that are being worked present cities within themselves. Not only by day are to be seen hundreds of miners wending their way to their respective places of work, but by night the busy scenes are like observable. The Antelope Co., on Silver Hill, are working more men now than ever before; the rock that is now being taken out is exceedingly rich; their mill on Bodie Gulch will be running in a few weeks, then look out for a big advance in their stock. It is already going up. The Utah Co. continue to work their ledge with energy. The rock pays well. The Cortez Co. are working day and night. It is not too much to say that they have got one of the richest claims in the district. The New York Consolidated is within the limits of the same rich belt. This company have a well-defined ledge, and take out rock full of the precious "oro." The few tons that are piled up at the mouth of the shaft will bring them in rich returns when crushed. The Iowa Co. have a house over their shaft, and are pushing ahead. From the bottom of their shaft they are getting good rock. I send you these "brief mentions" that you may know what Esmeralda has done and is doing since you left. In my next I will give you some facts concerning the other mills in the district. Respectfully yours, ****

STAGE LINE TO WASHOE.—We would call the attention of our readers to McCue's Washoe Stage Line, advertised in our columns to-day. McCue is an old stager and has been running for the past six years. He always takes his passengers through within schedule time, and has never met with an accident. The stages now leave each end of the route upon alternate days. A daily line will be put on next month. The Henness Pass is an easy and expeditious route by which passengers can reach Virginia City.

STREET RAILROADS IN NEVADA TERRITORY.—A Company is before the Nevada Territorial Legislature asking for a grant to construct a railroad along the streets of Virginia City and extending the same through Gold Hill. The Company offers to pay for their franchise a yearly county tax of $50 on each car employed upon the road—the charter to continue for fifty years.

A STOCK BOARD has been formed at Gold Hill, Nevada Territory, with the following list of officers: O. H. Platt, President; Samuel Arnold, Vice President; G. W. Pease, Secretary, and H. G. Maynard, Treasurer.

Patent Department.

Perpetual Motion.—Mr. John M. Petterson, of this city, thinks he has accomplished the "mechanical impossibility" of producing a perpetual motion, from which an available working power may be derived. At all events, he has taken the preliminary steps to secure letters patent, through the Mining and Scientific Press Agency. We shall probably be allowed to give a description of this simple, yet ingenious piece of mechanism. The inventor feels sanguine of success.

Pump Improvement—*A California Invention.*—This invention relates to an improvement in a pump for which letters patent were originally obtained in 1861. The improvement for which additional letters have just been obtained relates to an improved method of securing the air-chamber to the valve-chest of the pump, whereby a firm and durable connection of the above named parts is obtained, and one which will admit of being manipulated with the greatest facility, in order to secure the air-chamber to the valve-chest, and to detach it therefrom. The inventor, in his specifications, claims the combinations of the swinging screw bolts, C, and slotted plates, a, with the valve-chest, A, and air-chamber, B, in the manner specified. Thomas Hansbrow, inventor, Sacramento, California.

Apparatus for Concentrating Ore—*A California Invention.*—This invention relates to an improvement in the manner of sluicing or separating the *gangues* and rock or earthy matter from the ores of valuable metals after the same has been reduced to powder by stamping or crushing, so as to effect by the automatic action of water a perfect separation of the ore from the rock in which it was disseminated. This apparatus has already been noticed in our columns as in operation near Mokelumne Hill, in this State, where it has been successfully introduced for concentrating copper ores. It consists of a common sluice through the bottom of which an upward current of water is made to pass, and through which the heavier particles of ore or metal will pass, while the lighter or earthy portion of the mass to be worked is carried out of the mouth of the sluice. ames Hepborn, of Mokelumne Hill, California, is o inventor.

A New Blasting Powder.—Cincinnati papers nounce the invention, in that city, of a new kind blasting powder, much cheaper and far more powerful than any hitherto employed. It is said that eig pounds of it moved a rock twenty-five by thirty fee nd eight feet thick. It costs only three dollars keg.

A ew Painting Press.—James Gordon, a young farmer rom Caledonia, New York, has exhibited the model a new printing press of his own invention, which ombines several novelties, the utility of which can onl be determined by actual trial. The press prints b sides of the sheet at one feeding, one form bein on a flat bed, the other forming the segment of a linder. Its speed is calculated at 3,000 sheets an hr; its cost but little more than that of the large T or press. The cylinder form does not, as in the H press, make a complete revolution, but turns partia and returns. Gordon is a farmer, with mechan al genius. His only knowledge of presses was rived from seeing an ordinary Taylor press, in a P ester office, and he resolved to improve upon it.

A Magnetic n.—A Frenchman has recently invented a magn c pen uniting two metals capable of producing the ltaic current, which is excited by the moisture of hand. It diffuses a healthy and curative influence er the whole body of the person using it, acting on nervous system.

An Important overy.—It has recently been discovered that pres may be photographed on steel, and that an e ving thus obtained will give 5,000 copies. Illus ed books may soon become the rule rather than exception.

The Mining and Scientific Press Patent Agency,

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of n day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimensions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, flames, etc., also for designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every caveat	10
On every application for a patent	15
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulched in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Mining and Scientific Press.

W. B. EWER,.....SENIOR EDITOR.

C. W. M. SMITH. W. B. EWER. A. T. DEWEY.

DEWEY & CO., Publishers.

OFFICE in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms of Subscription:

One copy, per annum, in advance,.....$5 00
One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers.☜

Terms in Advance.—Having adopted the cash system, ALL payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

AMERICAN AND FOREIGN PATENTS.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

FAVORABLE TO INVENTORS.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

San Francisco:
Saturday Morning, February 6, 1864.

HO, FOR THE MINES!—The beautiful weather which has prevailed for the past few weeks, appears to be taken for pretty conclusive evidence that winter is well over, or rather, that the present is to be a year *without a winter*! Thousands of miners who have been hybernating in this city, for the past two or three months, are beginning to think seriously of once more taking their departure for the mines. Every up-river boat takes away crowds of such persons. It would be well if hundreds of idlers who are lounging about this city with "nothing to do," would early take their departure for quarters where there is ample room, and work for all who are willing to use the pick and shovel. The mountains are full of mines that will at least pay for the working. Then don't be lounging about the streets in this city, when you can, in two or three days, place yourselves where you will not only be able to make a comfortable living, but do the State and Nation a service as well, by aiding to open our mines, and develope the mineral resouces of the country. Ho, for the mines, boys!

We understand that a prospecting company is in process of organization, in this city to proceed to the northward of the Boise River, to some new diggings in that direction. The Company will take along a very superior outfit, and will go well armed. They take a small howitzer, to wake the mountain echoes as they move along. Such an arm will prove a powerful incentive to friendliness on the part of the Indian dwellers in those distant regions.

DEFERRED ARTICLES.—A letter from our traveling correspondent, dated at "Murphy's"; a communication from "An Observer" in Esmeralda; the first number of a series of articles on the geography, topography, geology and mines of the Great Basin, by "J. E. C."; a communication on "How to get to Reese River," with table of distances, etc., are unavoidably postponed until next week.

ELECTION OF OFFICERS OF REAL DEL MONTE MINING COMPANY.—The stockholders in the Real del Monte Mining Company, at their recent annual meeting, elected the following officers for the ensuing year: President, R. E. Brewster; Secretary, J. W. Willard; Trustees, R. E. Brewster, Asa T. Lawton, Wm. M. Lent, Alex. Gamble, Wm. N. Norris.

THE large space occupied by Prof. Whitney's Address, has compelled us to defer our usual illustration for the present week.

THE FOUNDRY BUSINESS of San Francisco is rapidly increasing and has already arrived at such a degree of perfection and importance that our foundrymen are now prepared to turn out every class of work which is called for in our ordinary commercial and industrial pursuits. The massive pinion wheel, cast by Goddard & Co., on Saturday last, elsewhere more fully noticed, and the heavy shaft manufactured by Donahue & Co., last winter, for the Moses Taylor, are proofs of the correctness of this assertion. What we now greatly need is a rolling mill of graduated capacity for the production and re-rolling of bar iron, when our facilities in that direction will also be fully provided for.

Early measures should be taken, however, aided by government subsidy, for the erection of a foundry and rolling mill of large capacity, for the production of heavy government work—such as the casting of the heaviest class of ordnance, and the rolling of heavy plates for armored war ships. Our isolated position renders the early establishment of works of such a character of the utmost importance, especially when we take into consideration the present threatening aspect of the European political horizon.

We have, at the present time, no less than twelve firms actively engaged in the foundry business, in this city, who unitedly represent a capital of not less than $2,000,000, and who give employment to about 1200 men. These foundries, during the past year have turned out fully $3,000,000, in value, of work. They are all constantly crowded with business, generally having orders on hand from two to three months ahead. Nearly or quite all these establishments have enlarged their working facilities during the past year, and most of them contemplate still further improvements during the year to come. The field for mechanical employment, of this description, in San Francisco, is almost boundless in its future aspect. San Francisco must ever continue, as it is, the machine shop, as well as the commercial centre of the Pacific coast.

A VALUABLE PAPER.—PROF. WHITNEY'S ADDRESS BEFORE THE MECHANICS' INSTITUTE.—We devote a large space in our columns to-day to the lecture of Prof. Whitney. This address is one of much value, and should be carefully perused by every person at all interested in the wonderful mineral developments which are now making such gigantic strides throughout the Pacific slope. The Professor gives us a brief review of mining on this Continent from its commencement to the present time, and closes by enforcing the the importance of some systematic governmental action, whereby the lights of science may be brought to aid the miner in his efforts; showing by comparisons between results in our own and other mining fields, the great advantages to be derived from such aids. We commend a careful perusal of the address to our readers generally. We are under many obligations to the Professor for the favor of his manuscript, by which we are enabled to lay the address before our readers. Applications from abroad have been made for the delivery of the address in other places. The present publication, however, relieves the Professor from such necessity, and still admits of its being placed before the great body of our citizens, who take an especial interest in the matters of which it treats.

THE WINE WEST MINING COMPANY.—An adjourned meeting of the stockholders of this company was held on Wednesday last, to receive the report of a committee appointed at a previous meeting to investigate the affairs of the company. The report was full in details, and completely dispelled the suspicion, if entertained, that the stock had been, at any time designedly depressed in value. The entire receipts and disbursements of the company were subjected to rigid scrutiny and pronounced correct in every particular. The report is on file at the office of the company, 113 California street, where it may be examined by stockholders. Mr. Dean having resigned, the secretaryship of the company, Mr. John F. Pope has been elected to fill the vacancy.

MINING SHARE MARKET.

The Mining Share Market, though ruling rather quiet, has fully continued the large amount of business which characterized the past month. But little fluctuation has been noticed, and prices have generally been well sustained, especially in leading stocks. The amount of business foots up $1,521,896,75.

Ophir has fluctuated from $1,490@1,550; 336 shares have changed hands at rates between the figures.

Gould & Curry opened at $4,925, advanced to $4,940 and 4,950, buyer 15 days. The directors have declared a dividend of $125 per foot for January, payable on and after the 8th—equal to 2½ per cent. on the market value of the stock.

Savage still continues in favor at $3,325@3,375, buyer 30 days, holders firm. The directors have declared a dividend of $50 per foot for January.

Challar has materially improved, and still continues to be largely dealt in; opening at $350 it soon advanced to 400, but subsequently declined to $370. Another assessment of $60 per foot was levied on the 25th ult., making $270 in all. Much speculation still exists with regard to the condition of the company's mine.

Lady Bryan has again become the chief feature in the market, having been largely dealt in at improved rates. We quote sales of 2,638 shares, upwards of one half of the entire stock of the company, at from $60@70, closing at 66. The impression appears to be gaining ground that the company possesses a really valuable mine.

The Desert is but little inquired for, but is held at from $24@28.

Burning Moscow has still further declined, and may be quoted at $105@110, buyer 30 days. We report sales of 368 shares from $91@110, buyer 30 days. The company have opened their works through into the upper shaft of the New Orleans, a collision from which no trouble is expected, as the two companies are not in litigation.

Baltimore American has been more active, at about last quotations. We quote sales of 330 shares from $39@44.

North Potosi has become quite a feature in the market; 934 shares, nearly one half the stock, have changed hands since our last issue, at rates still improved. Opening on Saturday last at $50 this stock touched $75 on Monday, but gradually declined to $70@72½ at yesterday morning's Board, and to $65 in the afternoon.

North American has been largely enquired for at an important advance. Opening on Saturday at $85, these shares gradually advanced until they reached $117½ at yesterday afternoon's Board, at which figure they remain firm. A large business has been noted, 781 shares having changed hands.

Harmon, El Dorado county, has met with sale at rates largely fluctuating, from $16@30, closing $18½; 272 shares have changed hands at the above rates.

North Ophir continues to be enquired for at about previous quotations $7@9.

We quote Hale & Norcross at $1550; Bassett, $37½, (this company is about putting up hoisting machinery,) Rhodes Diggings, $5: Iowa, $40@45; Napoleon, (copper) $55; Buckeye $13½; Mountain View, $10; Burgess, $17¾; Mount Hope considerably enquired for, from $9@12½; Baltic continues at about last quotations, from $165@170; Golden Swan, $35; Melones finds purchasers from 60@65; Burnside, at $15@18; Kohler Bro's. at $5; Gandaloupe, at $15; Independent, at $10; Sea[illegible], $15@16½; Rock Island, $16½; Tri-Union, at $9: Christiana, at $10; Petroleum Oil Works, at [illegible].

El Dorado has been considerably sought after at from $52@54—closing at $60. Shares the number of 141 have changed hand at from [illegible]@60.

Belcher is inactive; $20,000 in bullion has recently been shipped form this mine.

Iowa is inactive. We quote sales of 10 shares at $40@45. The ledge of this company is improving.

We quote Hale & Norcross at $1,550, buyer 30 days; Imperial at $195@185; Nevada (Justice Ground we quote 215 shares at 105@120, buyer 30 days; Gold Hill Quartz Mill[illegible] purchasers at $280 per share; Daney at $75; Charles Cany—70 shares from $8@10; Pride of the West $90@100; Michigan $30; Shawmut, 80 are from $29@30; Adriatic, 136 from $6½@10; Davisou Tunnel 215 from $2.87@4; Sierra Nada 55 shares $77½@82; Yellow Jacket 145 shs from $850@900; Lafayette, 172 shares from $[illegible]17; Caledonia Tunnel 57 shares from $25@; buyer 30 days; Blue Ledge 150 shares at $8@4; Laurel Hill, 100 shares at $3½.

Real Del Monte has still further declined, with an increasing business. We see sales of 1,725 shares

at from $120 @ 170 buyer 30. These shares opened on Saturday last at 160 reached 170 b. 30, on Monday, from which figure it gradually declined to 126 cash @ 140 buyer 30 days.

Campton (Esmeralda) appears to be attracting some attention. These shares found purchasers, last week at 6 @ 7. They opened on Saturday last at 9, and gradually advanced until they touched $25 on Friday.

Greenville is another new comer from Esmeralda, which has found purchasers for the last two weeks at 20 @ 21. This mine is located on Last Chance Hill. A crushing of 40 tons of rock, some ten days since yielded a fraction over $87 per ton, according to the Esmeralda *Star*.

Utah—we quote sales at $20@22½; Josephine, (Coso) at $1; Lord Byron at $11; Silver Hill, $13 @14; Wide West, $29@30; Antelope, inactive; Willow Springs, $1½; Coso, $4¾.

Humboldt Sales.—Cuba 10 at $4; Ben. Franklin, $5.

Reese River Sales.—Eriesson, 25 at $10; Idaho con. unassessable, at $10; Idaho con. $11½; Crockett, con. $16@21; Standard, $35@37½; Broderick, $10½.

Owens River.—Golden City, at $9¼; Victory, unassessable, $7½.

WASHOE STOCK MARKET.

Collated from the Daily Reports of the Virginia Daily Union, to Monday evening, February 1st.

Business for the week closing with our latest dates has been more than usually brisk. A growing feeling of confidence appears to be obtaining in this market. Capital from this city is finding its way over the mountains for investment. The transactions of the week foot up much larger than usual. An especial activity appears to be manifest in Gold Hill and American Flat stocks—partienlarly in the latter. The Lady Bryan, in the Flowery district, is still looked upon as a most promising mine, and is steadily advancing in favor. Desert is somewhat less in demand, but is nevertheless held quite firm.

Virginia District.—Burning Moscow, $112 asked. Bajazet & Golden Era, 25 bid; 50 asked. Granada, 2 50 asked. Iowa, 200 asked. New Orleans, 15 asked. Kenosha, 10 asked. Milton 55 asked. Spanish No. 2, 4 50 asked. Sutro, 6 asked. Birdsall, 25 asked. El Dorado, 40 bid. Kenosha, 10 asked. Milton, 30 bid; 45 asked. Santa Rosa, 20 asked. Utah, 150 asked. Texas 15 asked. Alban, 22 asked. Honduras, 10 bid; 10 asked. Moss, 14 bid; 20 asked. Mount Davidson, 1 bid; 7 asked. United States, 2¾ bid; 3½ asked. William Penn, 7 bid; 20 asked. Irving, 6 bid. North Potosi, 40 bid; 70 asked. St. George, 12½ asked. Poney Express, 5 bid; 7½ asked. Chollar, 325 bid; 400 asked. East Comstock, 30 asked. Allen, 45 asked. Orleans Flat, 10 bid. Pioneer, 7 asked. Sacramento and Meredith, 80 asked. Seneca, 8 bid. Sierra Nevada, 100 asked. Union, 15 asked. Martelle, 5 asked. Oakland, 5 asked. Church Consolidated, 4 bid. Northern Light and Sunny South, 6 bid. Nevada and Desert, 12 asked. Ponce de Leon, 100 asked. Polo Alto, 3 bid; 15 asked. Philadelphia, 12 asked. Washoe Zephyr, 10 asked.

Gold Hill District.—Amador, 10 asked. Astor, 5 bid; 10 asked. Branch Mint, 11 bid; 20 asked. Belle Vernon, 5 bid. Consolidated Company, 20 bid. Cherokee, 4 asked. Crown Point Ravine, 18 bid; 20 asked. Dardanelle, 9 asked. Eureka, 8 bid. Empress, 22 asked. Frankell, 4.50 bid. Golden Horn, 5 bid; 7.50 asked. Gillmore, 20 asked. Golden City, 7 asked. Golden State, 10 asked. Hawkeye (original), 85 asked. Jim McClellan, 3 asked. John A. Logan, 4.50 bid. Keystone 22 bid; 30 asked. Knickerbocker, 20 bid. Leon, 3 bid; 10 asked. Louisville, 20 asked. Mary Ann, 60 bid; 75 asked. New Oregon, 16 asked. Nevada, 20 asked. Oneoto, 14 bid. Pilot, 7 asked. Rock Island, 13 bid; 15 asked. Robinson, 6 asked. Central Sweezy, 30 bid; 100 asked. San Francisco, 2.50 bid. United America, 20 asked. Vulean, 10 asked. Miantonomah, 15 asked. Uncle Sam, Sr., 11 bid; 25 asked. Native American, 10 asked. Dowd Company, 10 asked. Malacoff, 6 asked. Gentry, 10 asked. Mansfield, 1.50 bid; 3 asked. Dr. Perry, 3 asked. Hooker, 8 asked. LaMotte, 10 asked. Bullion, 45 bid; 70 asked. Baltic, 100 bid. Baltimore American, 30 bid; 45 asked. Caledonia Tunnel, 25 bid; 35 asked. Clinton & Hobbs, 5 bid. Golden Horn, 5 bid; 9 asked. Globe, 8 bid; 15 asked. Golden Gate, 3½ bid; 5 asked. Hawkeye (original), 65 bid; 75 asked. Justice, 110 bid; 135 asked. Jenny Lind, 5 bid. Kentucky, 4½ bid; 8 asked. North America, 85 bid; 105 asked. Napoleon, 8 bid; 10 asked. Overman, 500 asked. Pontiac, 5 nsked. South Midas, 12 bid. Tontine, 20 bid; 20 asked. Vesuvius, 7 nsked. Victor Hugo No. 2, 10 asked. Yellow Jacket, 900 bid. Cuba, 5 asked. Bertrand, 6 bid; 10 asked. Pride of Ameriea, 50c bid; 5 asked. Pony Express, 3½ bid; 10 asked. Koh-i-noor, 15 asked. Grizzly, 4 bid; 6 asked. Belcher, 1,300 asked. Crœsus, 43 bid; 55 asked. Crescent, 5 bid. Colorado, 7 bid; 18 asked. Coppers, 5 bid. Champion, 4 bid; 15 asked. Diligent, 2½ bid. Fairmount, 125 bid; 150 asked. Flying Cloud, 10 asked. Minerva, 325 bid. Michigan, 45 nsked. Massilon, 1 bid; 10 asked. Naragansett, 12 asked. Navigation, 7 bid; 15 asked. Omega, 175 bid; 400 asked. Pond, 15 bid. Pompeii, 10 bid. Repvblie, 10 asked. Retribution, 25 asked. Superior, 200 bid. Sweezey, 40 bid; 250 asked. South Midas, 15 bid. Victor Hugo, No. 2, 15 asked. Wm. B. Astor, 10 asked. Argo, 25 asked. Exeelsior, 18 bid. Golden Swnn, 25 bid; 35 asked. Prineess, 1 bid; 5 nsked. Victor Hugo, No. 2, 20 asked. Wimmer, 12 asked. Sam. Patch, 1 bid; 5 nsked. Jewett & Sheppard, 5 asked. Mayflower, 8 asked. Wnshoe Zephyr, 5 asked. Portia, 5 bid. Gold Canon Consolidated, 10 bid; 25 asked. Curson, 6 asked. Lee, 3 bid; 7 nsked. South America, 20 bid. Union, 12 asked. Yellow Jacket No. 2, 30 asked. Mayor, 15 asked. Silver Veil, 3 asked. Cristo Consolidated, 5 bid. Polo Alto, 4 bid; 15 asked. Mechanics, 5 asked. McMeans & Williams, 4 bid. Nevada Consolidated, 20 asked.

Flowery District.—Adriatie, 16 asked. Atwill, 10 asked. Lady Bryan, 55 bid; 65 asked. Capitola, 15 a ked. Desert, 15 bid. Uncle Sam, 2½ bid; 5 asked. Harrison, 1 bid; 4 asked. Yankee Jim, 2½ bid; 7½ asked.

Devil's Gate District.—Pride of the West, 60 bid; 110 asked. Pioneer, 25 asked. Sebastopol, 5 bid; 10 nsked.

Indian Springs District.—Whitman, 125 bid; 350 asked. Orion, 12 bid; 21 asked. Jackson, 10 bid.

Argentine District.—North Ophir, 4½ bid; 4½ nsked. Shelton 4 bid; 10 asked. Aspinwall, 1 bid.

SALES REPORTED SINCE OUR LAST ISSUE

Five shares Tontine sold at $17; 10 shares dito, at $19; 20 shares Honduras at 8; 3 shares Crœsus at 55; 5 shares Frankell at 6; 10 shares New Oregon at 14; 20 shares Rock Island at 13.50; 100 shares Tontine at 20; 283½ shares of North Ophir at 4.50; 20 do. at 4; 10 do. at 5; 12½ shares Branch Mint at 14; 80 shares Belle Vernon at 5; 20 shares Pontiac at 5; 15 shares Tontine at 21; 50 shares Mansfield at 3; 50 ditto at 1.50; 20, Napoleon at 13; 3 shares Shamrock at 7; 5 shares Belle Vernon at 4.50; 25 shares ditto at 5; 10 shares New Oregon at 16; 50 shares Vulcan at 4; 7 shares North Ophir at 6; 200 shares Nevada at 16; 10 shares Napoleon at 16; 100 ditto at 15; 10 ditto at 16; 10 ditto at 14; 20 shares Arizona at 10; 25 feet Bertrand at 5 per foot; 20 feet Golden City at 2; 20 feet Amador at 2; 10 feet Golden Horn at 7; 20 feet Mayflower at 2.50; 20 feet Bertrand at 6.50; 2½ feet Navigation at 10; 20 feet New Oregon at 8.50; 20 feet Baltic at 170; 10 feet New Oregon at 11; 6 feet Honduras at 10; 5 feet Oneoto at 12.50; 10 feet Frankell at 6; 10 feet New Oregon at 8; 10 feet New Oregon at 10; 10 feet Grizzly at 5; 25 feet Belle Vernon at 5; 4 feet Nightingale at 5; 10 feet Justice at 119; 10 feet Justice at 120—s. 3; 5-6 foot Crown Point Ravine at 15; 100 feet Belle Vernon at 5; 50 feet Sonora at 6; 45 feet Shelton at 5; 20 feet Rock Island at 13.

The Gold Hill Stock Board.—The Virginia Daily *Union*, of Tuesday last, says of this new Board:—It is not generally known that there is a regular Stock Board in our sister town of Gold Hill. The large amount of transactions in American Flat stocks has caused this movement, and if managed right, the institution ought to become self-sustaining. The following sales were made in the Board last evening: Ten feet New Oregon at $14; 10 feet Tontine at $17; 12½ feet Vesuvius at $3.

A Working Assay.—We have been shown the result of the working of twelve pounds of average rock, taken by Peter Davis from near the surface of the Aspinwall and Biglow ledges, on '49 Hill, Amador district, Reese River, N. T., which was reduced at the Metallurgical Works, 616 Merchant street. The Aspinwall produced $295.03, per ton, and the Biglow $162.63. The former lode is ten feet wide. Both claims were mentioned in a letter recently published in the Press.

La Favorita Mining Co.—Some very fine specimens of red oxide of copper may be seen at the office of this company, 429 Sacramento street, containing from 60 to 90 per cent. of copper, with a good percentage of silver. These specimens are very fine and among the best we have ever met with. The mine is located some 200 miles from Guymas, Mexico, from which point to the mine is an excellent wagon road. Wood and water abounds in the immediate neighborhood. The company expect soon to receive several bars of metal taken from the ore at the company's reduction works, which have been erected at the mine, under the direction of their able superintendent, Mr. Thielebein. This is evidently a very valuable mine, and will soon command a high price in this market.

Rio Chico Silver Company in Sonora, Mexico.—We have received the report of the Superintendent of the above named company's mine. From it we learn that the Company have four mines well opened and prospected, and are putting up a fine mill for the purpose of reducing their ores. These works are located on the Rio Yaqui, in the district of Rio Chico, about one hundred and twenty miles from Guaymas by a good wagon road. The whole is under the superintendence of our old friend, the Hon. E. B. Smith, late of Sierra county, who has had much experience in quartz mining, and has the reputation of being one of the most energetic and successful miners in the State. The mines must be very poor if they will not pay under his management.

Steam Boiler Cleanser.—We would invite the attention of those of our readers interested in managing steamboats to the advertisement, in another column, of an antidote for scales and incrustation, which has gained high favor in England. It is now being introduced into use on this coast, and reference will be given to parties using it, on application at the office of the agent, G. Venard, 627 Front street.

Record of New Incoporations.

Taymuck S. M. Co.—Sonora, Mexico. Trustees: J. O. Rountree, W. Glaskin, F. K. Shattuck, F. D. Kohler, John Gieschen. Capital stock, $240,000.

Lotta S. M. Co.—Reese River. Trustees: C. H. Reynolds, S. E. Holcomb, J. W. Wadleigh. Capital stock, $375,000.

St. Helena G. & S. M. Co.—Reese River. Trustees: E. J. Baldwin, Bernard D. Murphy, James Bargin, Jacob B. Former, R. Hndepohl, Capital stock, $100,000.

NEVADA TERRITORY.

We gather from the Territorial papers the following names of mining companies which have recently filed papers of incorporation:—

National, Lyon county; General Banks, Amador district; Mammoth Tunnel and Water Co., Amador district; Bickwell, Reese River district; Monte Christo, Amador district; Merida, Amador district; Huron, Reese River district; Dachita, Gold Hill district; Satellie, Gold Hill; Union, Peavine district; Western Reservo, Blue Sulphur Spring district; Princess Alice, Virginia district; Wall Street Mining Company, Blue Sulphur Springs; Jo. Daviess, Gold Hill district; Haven, Virginia district; Exchange, Virginia; Sister Helen, Gold Hill District; Warren; Reese River District; Union Flag, Lander county; Freeman, Austin; Windsor, Clifton, R. R.; Wildwood Tunnel and Water Co., Amador, R. R.; Stangroom, Gold Hill, N. T.; San Juan, Virginia City; Western Reserve, Virginia City; Polan, Virginia City; Scott Consolidated, Virginia City; Maggie, Virginia City; Mattie, Virginia City; Roman Eagle, Gold Hill, N. T.; Mary Alice, Virginia City; Effingham, Gold Hill; American Flat Tunnel Co., Gold Hill; Golconda, Virginia City; Challenge, Gold Hill; Red Ledge, Desert District, N. T.

Cristo Consolidated Gold and Silver Mining Company.—Location, Gold Hill District. Capital stock, $800,000. Trustees: T. H. Moore, J. D. Keely, D. E. Holt, H. P. Summers and F. Black.

Indisputable G. & S. M. Co.—Virginia District. Capital stock, $280,000. Trustees: F. M. O'Connor, E. D. Pepper, Thomas Delaney and Richard House.

West Point M. Co.—Gold Hill District. Capital stock, $900,000. Trustees: W. E. Hale, O. H. Platt, H. H. Flagg, J. Thompson, P. D. Headly.

Dashaway O. & S. M. Co.—Desert District. Capital stock, $825,000. Trustees: R. E. Arick, J. Doyle, C. M. Thomas, C. G. Marsh, L. B. Hastings.

Hale & Hunt G. & S. M. Co.—Capital stock, $500,000. Trustees: W. E. Hale, C. V. Boquest, Wm. Hunt, D. W. Jones, Jos. Tyther.

Native American G. & S. M. Co—Capital stock, $100,000. Trustees: G. K. Reed, C. Bogan, G. W. Grow, Israel Dyson, John W. Bellamy

To Prevent Dampness in Brick Buildings.

During the extended rainy season on this coast, it has hitherto been almost impossible to prevent dampness from gathering to a greater or less extent on the inside walls of brick buildings, especially such as are constructed of the soft, porous brick, almost universally employed in this State. There can scarcely be a doubt but that a large amount of sickness and numerous untimely deaths are annually produced from this cause. Recent experiments, however, have furnished us with a cheap and most efficient remedy for this difficulty, in the now common article of tar—the residum obtained from the distillation of coal, wood, etc.

This substance may be applied, in the manner of paint, to the outer surface of brick or stone buildings. Two or three coats thus applied will render any brick or stone wall perfectly impervious to moisture, and forms a coat upon which paint may be subsequently spread, and at a much less cost than upon the naked bricks, which absorb a large quantity of oil without rendering the walls impervious to moisture for any considerable length of time. The previous application of this tar—which is of a gummy, resinous character, fills up the pores of the bricks, near the surface, and retains its place permanently, or at least for a long period of time. It should be applied quite warm.

Bricks immersed in this substanee, heated to about 200 degrees, according to a statement in Silliman's *Journal of Science*, beeome suitable for use in the construetion of chlorine chambers, also for condensers for chlorhydric acid. A striking example of the preservative quality of this ingredient may be witnessed on the walls of a stone huilding ereeted upon the shores of the Bay of Biseay in 1858. Some of these stones, fronting upon the Bay, where they are exposed to the decomposing influences of the sea-air and salt spray, have beeu actually worn away on all their faces, except those portions which were numbered with figures placed upon them, previous to their beiug laid up. These figures are now presented in eonsidcrable relief, and with much sharpness.

A coat of this substance was applied to several buildings in Grass Valley, Nevada county, in this State, some three years since, which, we understand, stood the weather, last winter, admirable well. although it was almost impossible, during previous winters, to keep the moisture from penetrating the walls in great profusion, even by numerous and heavy coats of paint. We should be pleased to hear from some friend whether it still continues to serve that purpose. The material used in this case, was obtained, we believe, from the gas-works in that place, and was produced from the distillation of pitch-pine wood, which is employed there for the manufacture of gas.

A Wealthy Landholder.—It is said that Abel Stearns, of Los Angeles, is the largest stock and land owner in the United States. His lands are embraced in twenty-one different grants, containing in all over 450,000 acres. Last year he had 58,000 head of stock, 7,000 of which have died within a few months for want of food.—*Exchange.*

Mr. Stearns is now on a visit to this city. We had the pleasure of meeting him a few days since. He is apparently in the enjoyment of a hale and vigorous old age, walks without a cane, and with a firm and elastic step, which gives evidence that the care of his broad acres and "cattle upon a thousand hills" rests lightly upon his shoulders.

Mining Dividends.—The Gould & Courry S. M Co. have declared a dividend of $225, per foot for the month of January, payable on and after the 5th instant.

The Maxwell Creek Gold Mining Co., of Maxwell's Creek, have declared a dividend on their capital stock, payable at their office, 421 Jackson street, on and after the 3d instant.

The Savage Mining Co. has declared a dividend of $50 per foot, payable on and after the 5th instant.

The Publication of Mining Notices in the Mining & Scientific Press obtains for them a more general circulation, among parties directly interested, (in this city and throughout the mining districts of the coast, than can be secured through any other medium. State laws require their publication but once a week, and Secretaries and Trustees can make a material saving of costs to stockholders by ordering their advertisements inserted in the journal most properly entitled to receive their patronage—the weekly Mining and Scientific Press.

JOHN DANIEL,

IMPORTANT INVENTION!
THE SUBSCRIBER OFFERS TO THE PUBLIC HIS
Patent, Double-Action,
WOOL, COTTON AND HAY PRESS,
The cheapest, most effective and most economical Press in use for the above Purposes.

This Press acts by a combination of the three mechanical powers—the Screw, the Lever, and the Wedge.
Its cost is less than any other in use. It operates with less power, more speed, and occupies less space than any other.
To Shippers and Packers of Wool, Cotton, Hay, or any similar goods, or for packing in general, where compression is required, it will be found of great economic value.
It is many action in principle, and can be so constructed as to pack from one to four or more bales, at one and the same time.
The inventor challenges competition with any other machine in use, employed for similar purposes.
The Patentee would make a liberal proposition to any suitable person, with small capital, to take an interest with him in the manufacture and sale of this machine, and for several others of equal importance, the details of which are now completed, and for the manufacture of which he is prepared to make contracts.
All communications or orders should be addressed to J. M. Parry, Patentee, at Grush & Co.'s, pattern and model makers, on Fremont street, between Mission and Market streets, San Francisco, where a model and drawing may be seen.
5v8-tf J. M. PARRY, Patentee.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahoe's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

Must be seen to be Appreciated!

THE FLORENCE!

A GREAT IMPROVEMENT!

THIS CELEBRATED

NEW SEWING MACHINE

IS ACKNOWLEDGED TO BE

THE BEST IN THE WORLD!

IT MAKES FOUR DISTINCT STITCHES!
IT FEEDS THE WORK EITHER WAY!
WILL SEW OVER THE HEAVIEST SEAMS,
WITHOUT CHANGE OF TENSION!
IT SELDOM, IF EVER, DROPS A STITCH!
IT SEWS WITH SILK OR COTTON THREAD EQUALLY WELL!
IT RUNS LIGHTLY, SEWS RAPIDLY AND IS ALMOST NOISELESS!
IT DOES THE HEAVIEST OR FINEST WORK WITH EQUAL FACILITY!
IT MAKES A STICH ALIKE ON BOTH SIDES OF THE FABRIC, USING ONLY HALF THE QUANTITY OF THREAD NECESSARY FOR THE OLD FASHIONED CHAIN-STICH MACHINES!

WHILE IT POSSESSES ALL THE GOOD QUALITIES OF others, and has many advantages over any and all of them, the FLORENCE is sold at corresponding prices with other first-class Machines. We

WARRANT EVERY MACHINE

To be all that we claim for it, and will give a WRITTEN WARRANTY if required.

AGENTS WANTED in all the principal cities and towns on the Pacific coast.

Send for Circulars and samples of sewing.

DON'T BUY A SEWING MACHINE UNTIL

YOU HAVE

SEEN "THE FLORENCE!"

Two Good Canvassing Agents can find profitable employment by calling at this office. None but active and competent men need apply.

To Druggists and all Prescribing for Neuralgic and Nervous Cases.—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.
For sale, Wholesale and Retail, by SAMUEL ADAMS, U. S. Drug Store, corner of Pine and Kearny Streets, San Francisco. 6v8-2m

Wide West Mining Company.

NOTICE.

The Office of the Wide West Mining Company
Is Removed to No. 113 California street, San Francisco,
6v8-4t JOHN F. POPE, Secretary.

PATENT STEAM BOILER CLEANSER,
—OR—
Antidote for Scales and Incrustation
Formed by the Deposit of Water in Steam Boilers.

Used in all Boilers at the London Exhibition in 1862, By order of Her Majesty's Commission.

G. VENARD,
No. 627 Front Street, San Francisco,
SOLE AGENT FOR CALIFORNIA AND THE PACIFIC COAST.

This Compound has undergone the examination of the most competent Chemists in France and England, and has been pronounced all over Europe the BEST ARTICLE ever found for removing Scales in Steam Boilers, this great evil of industry.
The main qualities of this Compound are: that it removes the scales of any boiler in a few days, no matter how old, and it does not injure the metal in the least. The raising of steam is made easier. It saves fuel and work, and prevents all dangers of explosion.
The Compound has now been in use for three years, and the great success obtained in the Old World induced the undersigned to introduce it in this State, being confident of the patronage of this enlightened and industrious country. G. VENARD,
No. 627 Front street, San Francisco.
☞ Reference will be given to parties using the above, at the Agent's office. 6v8-1m

The Pacific Monthly Magazine,

The only original magazine published on the Pacific coast.
EDITED BY LISLE LESTER,
Recently from the East, comes out in new type, new cover, and fresh in all its material and matter. This Magazine will be devoted to the Literature of the Pacific coast, and will equal any of the Eastern publications in variety, taste and class of its contributions.
The Editress is striving to make it a

HOUSEHOLD WORK.

A new story written by an Eastern lady of talent and renown, commences with the January number. All who wish to read "SHIMAH" must subscribe at once.
The PACIFIC MONTHLY now established on a permanent basis, it numbers among its contributors the best writers of this State, and offers to those who love a chaste, thoughtful and elegant style of literature, attractions superior to those of any other publication on this coast. Its aim will be to elevate the literary standard of this State, and give to the world a truthful picture of the life and literature of California.
The March number is to be illustrated with views around San Francisco.
The Editor's table is alone worth having.
The subscription rates are less than other works of a similar character. All orders promptly attended to.
Office room, No. 45 Government House, North West corner of Washington & Sansome Streets, San Francisco, Cal.
Terms: Per year, in advance $3 00; per year, if payment be delayed three months $4 00; Single copies 25cts; Clubs of five $12 00; Clubs of ten $20 00.

STAGE NOTICE.

NEVADA STAGE COMPANY.

ON AND AFTER SATURDAY, JANUARY 24, THE STAGES OF this line will run in connection with the Sacramento Valley Railroad from Auburn Station, each even date in the month, until further notice, to Allison's Ranch, Grass Valley, Nevada, Eureka, Steamboat Springs, Virginia City, and all points in Nevada Territory.
Office, corner of Front and K streets, Sacramento, opposite the What Cheer House.
N. B.—This line has been running stages for the last six years, and has never had an accident. Passengers can depend on their safety and comfort, as there are no persons in the employ of this line who are not stagemen. [6v8-1m] J. S. McCUE, Proprietor.

VALENTINE'S DAY!

MONDAY,.....February 15, 1864.

VALENTINES in solid Rosewood and Mahogany Cases, with Lady's Watch, and with Lady's Pin and Ear Drops, from Tucker's Jewelry establishment.
VALENTINES of every conceivable variety: Valentine Stationery, Valentine Cards, Valentine Mottoes.
FIFTEEN new and Original California Comics; local, and to the point.
NEW CALIFORNIA Valentine writer, containing 126 original, comic and sentimental, on all subjects.
VALENTINES on all subjects, written to order, at short notice.
VALENTINES—Persons caricatured—pencil sketch—in the best style, at short notice.
APPLETON'S VALENTINE EXPRESS, with six horses, will deliver Valentines every hour in the day, in every part of the city.
D. E. APPLETON & CO.,
508 Montgomery street, Opposite Tucker's and Telegraph Office.

"CHIPPINGS."

A new theater is now in progress of erection on Pine street. just below Montgomery, in this city. This theater is to be equal, in all its appointments, to any similiar first class institution in the Atlantic States.

Blackbirds' wings are now worn on the jaunty head gear of juvenile Misses at the East. They are placed folded in their natnral position. These wings are coal black, with a little patch of vivid vermillion on the shonlder. The effcct is said to be very pretty.

Europeau Advices show continued and increasing apprehensions of a general Continental War.

The Nevada Gas Works which were destroyed by the recent disastrous fire in that city are again in operation.

A correspondent of the Marysville *Appeal* pronounces the "tree cotton" a failure. It may he so with him. We should like to learn the experience of others in this experiment.

Notice has been given in the Nevada Territorial Legislature, of bills to consolidate the cities of Virginia and Gold Hill. Virginia wants to, but Gold Hill "smells a mince" in the shape of a large debt.

A man named Kirdan was killed, in a fight, by one Sulivan, at Hoskin's Ranch, Calaveras county, some few days since.

The floating ice in the Columhia river put a stop to uavigation.

Dodson, a "sport," was recently shot through the thighs, at Portlaud, in a quarrel with Lopens, another sport.

A novel expedient was resorted to a few days since by the owner of an out-door amphi theater near Marysville, to keep boys from climbing over. He daubed the outside freely with molasses—"treacle" won.

The Famous Fremont-Mariposa estate contains 44,387 acres, or ahout seventy squrare miles.

Strong efforts are being made in Southern Sierra to continue and complete the work on the Yuba Gap road.

About eleven hundred vessels entered the port of Victoria duriug the year 1863; one-half were British, the remainder forcign, and chiefly American.

Walter Savage Landor is perhaps the oldest English author, for he is now 90 years old. This veteran has in the press a volume of Heroic Idyls and Other Poems.

To show us the worth of time, God, who is most liberal in all other thiugs, is exceedingly frugal in the dispensing of that; for he never gives us two moments together.

Jeddo, the capital of Japan is the largest city in the world. It contains 1,000,000 dwellings, and 5,000,000 inhabitauts.

A steam gong has lately heen put on Colt's armory. The thing is six feet high and fifteen inches in diameter.

A Bill is perfecting in Congress for the creation of a new Territory out of portious of Idaho and Utah, to be called Montano.

It is said that there is no more than a month's supply of lumber on hand in San Francisco—some 10,000,000 feet.

A suit has been commenced in this city against the Josephine Mining Company, by S. E. Holcomb, for $21,000.

At the commencement of the new year there were no less than forty-eight vessels of war at the Brooklyn Navy Yard building, fitting out and preparing for sea.

It is said that there will soon be enough colored troops on the Mississippi to guard the whole river and garrisou the towns.

The word Chattanooga signifies, in the Indian tongue, fish-taking.

Mr. Seward's report for Congress of diplomatic correspondence since January last, will, it is said, comprise a printed volume of two thousand pages.

The scarcity of farm labor in Missouri is becoming a serious evil.

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

CROCKER'S
STOCK AND ASSESSMENT LEDGER.
Copyright secured—Price $10.

The necessity of a proper book for keeping the Stock and Assessment accounts of Corporations has long been very much needed. One that would combine economy and simplicity, and would not require the services of an experienced book-keeper to keep the accounts correctly. CROCKER'S STOCK AND ASSESSMENT LEDGER has met this requirement; we have submitted it to several Secretaries of corporations, and they acknowledge that the plan is admirable, and just what has long been wanted. The printed headings are a perfect explanation of the manner of keeping it; and any person, whether they understand book-keeping or not, cannot make an error in the accounts. The Stock and Assessment accounts are so arranged that the Secretary can in a moment tell how any stockholder's account stands, both in regard to Stock and Assessments. He can also, with the greatest ease, trace any certificate, through any number of transfers, to the original one issued. It saves a great amount of labor, as it does not require one-fourth the writing of the ordinary method. It dispenses entirely with the old style of Stock Ledger, Stock Journal and Assessment Book, all three of which Secretaries have heretofore been obliged to keep, condensing the whole in one book. To a person who is Secretary of several companies, this book will prove invaluable, and we feel no hesitation in guaranteeing satisfaction to those who may order them. Specimen sheets sent to those who desire to examine it. The books are ruled with one or two accounts to the page. State which is preferred.

Published and for sale, wholesale and retail, by
H. S. CROCKER, & CO.,
Book and Job Printers, Sacramento.

CERTIFICATES and complete sets of books for Corporations, in the finest style, at short notice, and low rates. 4-1m

WHEELER'S
Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

January 18th, 1864. 4v8-1m

Prima Donna Gold and Silver Mining Company, Devil's Cate District, N. T.—Notice is hereby given, that the Board of Trustees of the Prima Donna Gold and Silver Mining Company, at a meeting of said Board, held January 19th, 1864, levied an assessment (No. 5) of fifty cents on each and every share of the capital stock of said Company; said assessment payable immediately, in gold coin, to the Secretary, at the office of the Company, No. 620 Washington street, Room No. 3.

4v8-1m H. B. CONGDON, Secretary.

Mount Eden Mining Co.—Notice is hereby given, that the Board of Trustees of the Mount Eden Mining Company, at a meeting held January 2d, 1864, levied an assessment of One Dollar on each and every share of the Capital Stock of said Company, said assessment payable immediately in gold coin to the Secretary, at the office of the Company, No. 620 Washington street, Room No. 3. H. B. CONGDON, Secretary.

San Francisco, January 16, 1864. 3-5t

Brown's Bronchial Troches for Coughs and Colds.— A neglected Cough, Cold, an Irritated or Sore Throat if allowed to progress, results in serious Pulmonary Bronchial and Asthmatic Diseases oftentimes incurable. Brown's Bronchial Troches reach *directly* the affected parts, and give almost immediate relief. For Bronchitis, Asthma, Catarrh, and Consumptive Coughs the Troches are useful. Public Speakers and Singers should have the Troches to clear and strengthen the Voice. Military Officers and Soldiers who overtax the voice, and are exposed to sudden changes should use them. Obtain only the *genuine*. "Brown's Bronchial Troches" having proved their efficacy by a test of many years, are highly recommended and prescribed by Physicians and Surgeons in the Army, and have received testimonials from many eminent men. Sold by all Druggists and dealers in Medicine in the United States and most Foreign countries at 25 cts. per box.

Agents for California, Redington & Co., San Francisco. 5-1m

Back Numbers.—We have a limited number of past volumes of the Press on hand, which will be sold, neatly bound, at reasonable rates. A portion of the back numbers of the paper can be had by the single copy.

Mr. Jarvis Jewett is our duly authorized advertizing agent and collector in this city.

Black Swan Gold and Silver Mining Company, Reese River District, Lander county, N. T.—Notice is hereby given, that the regular annual meeting of the stockholders of the Black Swan Gold and Silver Mining Company will be held on the first day of March next, at 4 o'clock P. M., at the Company's office, No. 305 Montgomery street, San Francisco. By order of the Trustees. J. S. LUTY, Secretary.

San Francisco, Jan. 27, 1864. 5v8-5t

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Zenith Gold and Silver Mining Company.— Office, 528 Montgomery street, San Francisco, January 8th, 1864.—At a meeting of the Board of Trustees of the Zenith Gold and Silver Mining Company, held this day, January 8th, 1864, an assessment of $1 per share was levied upon each and every share of the assessable stock of said Company, now due and payable immediately, in United States gold coin, to the Secretary, at the office of the Company. By order of the Board of Trustees.

3 M. G. ELMORE, Secretary.

Enterprise Copper Mining Company.—Office 528 Montgomery street, San Francisco. At a meeting of the Board of Trustees of this company, held December 12th, an assesment of ten cents per share was levied, payable immediately, and another assesment of eight cents per share, payable January 1st, 1864, and another assessment of eight cents per share payable February 1st, 1864, all payable in U. S. gold coin, to Thomas S. Levy, the Treasurer, at Lincoln, Placer county, or to the Secretary, at the office of the Company. By order of the Board of Trustees.

M. O. ELMORE, Secretary.

Zenith Gold and Silver Mining Company, Office 530 Jackson street, San Francisco, January 6th, 1864.—Notice is hereby given, that, in accordance with the laws of the State of California, there will be sold at public auction, at the sales-room of Jerome Rice & Co., No. 327 Montgomery street, San Francisco, on MONDAY, February 8, 1864, at 11 o'clock A. M., to the highest bidder for cash, in United States gold coin, so many shares of the capital stock of the Zenith Gold and Silver Mining Company, standing in the names of the following shareholders, as will be necessary for the payment of three assessments duly levied by the Board of Trustees, as follows, to wit: Assessment No. 1, Twenty-five cents per share, levied September 24, 1863; Assessment No. 2, Twenty cents per share, levied October 13, 1863; Assessment No. 3, Thirty cents per share, levied December 2, 1863, together with costs of advertising and expenses of sale, unless said assessments, with accruing charges, are previously paid:

VOLUME VIII. SAN FRANCISCO, SATURDAY, FEBRUARY 13, 1864. NUMBER 7.

Editorial.

VENTILATION OF MINES.

The subject of mine ventilation is one which has hitherto been but little attended to in California; yet it is one of the utmost importance, and one which, as our workings become deeper and more extensive, must soon command the especial attention of mine superintendents. All mines, whether they evolve noxious gasses or not, require ventilation. Every one is familiar with the fact that respiration can take place but a very short time in a small, close room, whether it be in an ordinary dwelling or in the deep recesses of a mine. The combustion of candles also absorbs a large quantity of oxygen in a mine—two or three candles requiring quite as much as a man.

A mine when properly ventilated and drained is a more healthy place in which to work, by reason of the evenness of its temperature, than most places occupied by workmen above ground. But employment in a mine which is improperly ventilated, where the miners are compelled to breathe a stagnant atmosphere, is equivalent to deducting fully one third from the lifetime of all thus employed. There is an important consideration arising from a badly ventilated mine which is quite too seldom taken into account by mine owners. It is well known that men employed in such mines are unable to do more than three quarters or two-thirds the amount of full labor. The vitality, and consequently the strength of the workman, depends upon a constant supply of fresh air. If sanitary reasons are of no avail. self interest alone should prompt to thorough and effectual ventilation. There is something besides *time* lost, when a miner has to stop every five minutes to *trim his light.* We have had some personal experience, as a working miner, and know of what we speak. Every working miner who reads these paragraphs will at once recognize their force and importance. The conditions above alluded to often produce losses on a large scale, which are but little appreciated, and often not at all understood by proprietors.

Our object in these suggestions is to call more particular attention to what might otherwise be looked upon by many as a dry, uninteresting and useless detail of the principles of mine ventilation which we now propose to lay before our readers, and which may possibly be "continued" through two or three numbers, of the "Press."

The atmospheric air, in all subterranean excavations, undergoes numerous modifications, by which it is rendered more or less unfit for sustaining life, and often so charged with gases as to produce most disastrous explosions when brought in contact with the flame of a candle or lamp. With regard to the latter conditions we shall, at present, have nothing to say. They are conditions to which California mines are as yet but little exposed. At some future time we may consider them at length. The only inconvenience to which the California Miner is exposed, from want of ventilation, is a lack of the necessary amount of oxygen to sustain life and give healthy action to the lungs. All that is necessary is to produce and continue a regular current of vitiated air from the mine to the surface and a corresponding current of fresh air from the surface to the interior of the mine, to supply the place of the ascending current. Many costly, and often bungling contrivances are at times employed to accomplish this result; but generally, we apprehend, without any true conception of the laws by which even they are governed.

The ventilation of mines is sometimes effectually produced by natural causes alone; but generally artificial means have to be applied, to a greater or less extent, to accomplish the desired results. There are almost always circumstances which will produce a more or less feeble current of air through a mine, but usually uncertain in its force, and often entirely inoperative from no apparent reason, except that derived from a close examination into the laws which govern the movements of aeriform fluids. Hence the subject is divided into natural and artificial ventilation. Let us first examine into the

LAWS WHICH GOVERN THE MOVEMENT OF AERIFORM FLUIDS

or natural ventilation. When several aeriform fluids of different degrees of density or weight are contained in a vessel they have a natural tendency to arrange themselves according to their different densities—the heaviest at the bottom. Again when aeriform fluids of different densities are placed in separate vessels connected together as in fig. 1, but at unequal elevations, the lighter fluid will have a tendency to find its way to the upper vessel and the heavier to the lower, and thus a current will be produced and continued so long as any of the lighter fluid is left in the lower vessel, as for example, the two vessels A and B :—

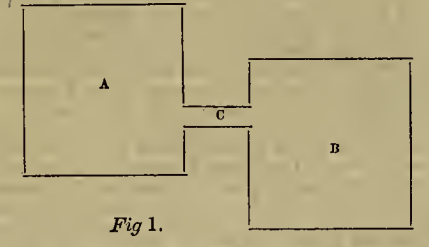

Fig 1.

If the lighter fluid contained in the vessel A has to pass through a long tube, C, before reaching A, the movement of this fluid meets with a certain degree of resistance, which of course diminishes its rapidity. This resistance is caused in part by friction against the sides of the tube, and in part also from the friction of the two counter currents which must be created in the tube C. This resistance is proportionate to the length of the tube, density of the fluid, nature of the walls of the tube, etc.

If the fluid pass from the tube A, in figure 2, into the smaller tube B, it increases in rapidity on entering the latter. If, in passing through the tube A, it is obliged to encounter the narrower orifice, D, as in figure 3, and is subsequently allowed to continue its course through the elongation of the tube A, at E again enlarged to its original dimensions, the rapidity will increase at the passage of the narrow orifice D, to reassume its original speed at E, diminished much more than in proportion to the resistance it has met in the passage D.

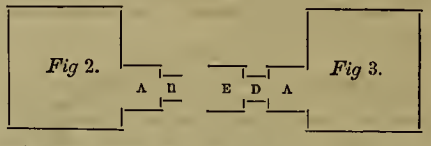

Fig 2. *Fig* 3.

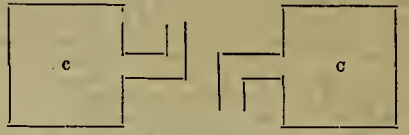
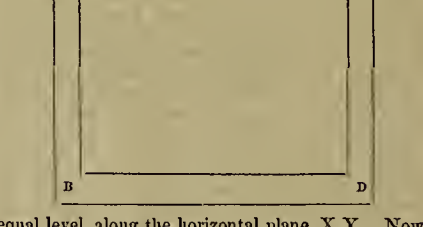
Again, if the tube instead of being horizontal, should be inclined, the pressure due to gravity will increase or diminish the speed of the escape, according to whether gravity acts with or against the movement, as will be readily inferred from the following diagrams marked C. C :—



With this explanation of the natural laws of aeriform fluids, we are now prepared to examine the

NATURAL CAUSES OF THE CIRCULATION OF ATMOSPHERIC AIR IN MINES.

Let us suppose two vertical shafts, A B, C D, communicating by a horizontal gallery, B D, so that their principal orifices, A and C, shall be upon an



equal level, along the horizontal plane, X Y. Now, if the air contained in the shafts and gallery above described be everywhere of the same density, it is evident that no movement will be produced from either shaft to the other, or, in other words, there will be no natural ventilation. But if one of the shafts, A B, for instance, contains a columns of air of less density than the air in C D, the equilibrium will be broken, and the heaviest column will descend and force the lighter column up and outward. We shall resume this subject, with further illustrations of a more practical nature, in our next issue.

The bill for the repeal of the Specific Contract Bill was killed in the State Senate on Wednesday, by a vote of 23 to 15.

"An Observer," Aurora, is requested to write us again, as we have lost his address.

[Written for the Mining and Scientific Press.]

Murphy's, Calaveras County.

BY OUR TRAVELING CORRESPONDENT.

Mr. Editor:—There was one little section of Calaveras county which I had not visited up to the date of my last letter, and as it contains mineral wealth of great importance — gold, silver, copper, and *tin*—reliably developed, I thought it better, while in the neighborhood, to run across. I am glad I did so, for I find the people of this quiet little town on the point of opening the first reliable *tin* mine on the continent of America. Will the wiseacres in San Francisco still persist in regarding these counties—Tuolumne and Calaveras—as the Jews did Nazareth, because, as they think, "no good can come out of them?" Well, by and by, Messrs. Darling & Co. will claim the $30,000 premium offered by Congress for the first American tin mine, and then the scales will fall from the eyes of these unbelievers, and they will bitterly regard the infatuation which has led them so long to neglect this portion of the State, which I honestly believe, after a full and careful examination, to be the richest mineral region in the world.

A VERITABLE TIN MINE.

This discovery of tin is of such importance that I shall give it precedence of all matter in this letter. You may recollect in my *second* communication from Copperopolis, I stated this metal would ultimately be found in Calaveras county, and some were pleased to laugh at the prediction. I knew, however, what I was saying; for I had even then seen enough to assure me of the fact, so I patiently waited my time. Those laugh loudest, it is said, who laugh last, and now my turn has come. The first day I was out about Murphy's, in company with Mr. Manly, I became convinced of repeatedly crossing over tin croppings; for, though to the casual observer they appear to resemble copper croppings, they are in reality quite different. Still I kept silent upon the matter, for I believe, at times, in the aphorism of Cicero, "that too much wisdom is no wisdom at all;" and least, as representing the Mining Press, I might be accused of talking for talking's sake. I knew very well, that this ledge at some point or other, would be opened, if not for tin, at least for copper, and that I would have an opportunity of forming a final judgment, as I visited the different claims. In this, I judged correctly. The same evening, Mr. Darling sought an introduction, requesting me to visit him in the morning, as he thought he had a tin mine. I did so, and found his surmises correct. There is no doubt about the matter; it is a tin vein, and a rich one. Some twelve months ago, it appears, Mr. Darling was struck with the peculiarity of these croppings, selected some of the richest rock, had it competently tested, and found a reliable yield of tin. At a subsequent period, some rock was sent to an assayer in San Francisco, without any particular directions, and concluding, I suppose, that all rock from this section would be for gold and silver, he returned "a little gold, a little silver, but neither in quantity worth working." He had evidently never dreamed of tin, and overlooked it. I have no doubt, had he been directed to test for that metal he would have sent a very *flattering* return. However, nothing daunted, but self-reliant and determined, Mr. D. took up the claim, formed a company, run his tunnel single-handed 136 feet, cut the vein, and to-day enjoys the proud distinction of discovering, and principally owning the *first* tin mine, I believe, in America. Up to the time of my arriving at Murphy's, the matter had been kept secret; but, during a subsequent ride over the hills with Mr. Jordan, to see his copper claim, we traced this vein for six miles, and found also a parallel vein, showing equally strong; the secret is out, and by this time, I expect the country is located for miles. Such is the history of the

UNION TIN COMPANY.

It contains 900 feet in 6 shares. Tunnel very handsomely opened. 136 feet just cutting the vein from 8 to 10 feet thick, as nearly as I could judge. The vein is remarkably strong and healthy, and well impregnated with mineral. It lies about a mile northeast of the town. Unfortunately the level of the tunnel, 70 or 80 feet below the surface, will not be deep enough to strike the ore; but I think a shaft sunk at the end of the tunnel, from 30 to 40 feet will do so. Mr. Darling, a very intelligent and gentlemanly young man, has promised to report his progress to you. We must now go to San Domingo, five miles from Murphy's towards San Andreas, and the northern limit, so far as known, of the copper formation. Here first is the

MOBILE.

It contains 2,200 feet in single foot shares. This vein was first found in the ravine, by placer miners. At 17 feet, it showed very excellent ore, ranging, I believe, from 16 to 37 per cent. The new shaft is 80 feet deep, 6 feet 3 inches in the clear, and very well timbered and finished. From this they are now drifting to cut the vein, and have some 16 to 20 feet to run. A large rich vein is expected at this depth. The upper works contain a 20-horse power steam engine from the Golden State foundry, a building 38 by 40, with all conveniences, which are kept very neat. Eleven hands are employed night and day. Mr. Sloss is Superintendent, and the condition of the mine does him credit. A short mile below, on the same vein is the

SAN JOSE.

It contains 3,000 feet in single foot shares. Main shaft 20 feet, abandoned for a tunnel already cut 80 feet with 180 feet more to run. Rock very hard, but of good character. They will cut the vein at 160 feet from the the surface. Some two miles or more north and west of this is the

STAR.

It contains 1,800 feet in 12 shares. Main shaft 20 feet, opening well, with vein reliably developed, 6 feet wide, showing, for the depth, superior oxide ore. Still I think they will have to go down from 40 to 50 feet more. Returning from here to town, probably one mile and a half, is the

GERMAN RINGE.

It contains 2,400 feet in single shares. Main shaft 36 feet deep, with a small cut to show the entire width of the vein. This, in my opinion, will be the richest claim in the district; the vein is 15 feet wide, and really magnificent in its indications. Work suspended for a short time, until the company make arrangements to cut a new tunnel, which they can do with great advantage. It will not be over 200 feet and will cut the vein at about 140 feet deep. There are several other promising copper mines in the neighborhood, some simply located, some merely opened. Of the latter, is the United Consolidated, principally owned by Mr. Manly, a large strong vein which is well located for tunneling. I have not time or space, at present, to do them justice, as I wish to speak of other mining interests.

I made the statement, at the commencement that gold and silver prevailed here, as well as copper and tin and they do largely. Indeed, all the auriferous veins yield silver, I believe, in paying quantities, but as yet they have only one really distinct silver vein, that I know of. It is called the

SILVER ELEPHANT.

It contains 1,800 feet, situated a short distance south of the town, near the school-house. The vein is 2 feet thick, and from their shaft, between 30 and 40 feet deep, the company have raised quite a large amount of very fine looking rock. Some of it almost equals the Gould & Curry. The splendid specimen Mr. McGowan of Alameda carried down for your cabinet, is from this claim, as well as the unburned piece. There is no mistake about these specimens, for I personally know them to be as I state. It is not every rock at Washoe, by any means, that will show the same amount of silver from the blacksmith's forge, that the piece which I sent you does; and yet, Mr. Crispin has even finer ones, intended for exhibition in San Francisco. Now, I have an idea that if I were to state such rock came from Calaveras county, men on Montgomery street would unhesitatingly tell me I either lied or had been deceived; but, if I told them it came from Imps' Delight, or Damnation Flat, 500 miles over the mountains, there would be a general stampede for that blessed spot, in less than a week's time, the same as there was to Reese River last summer. So much for our infatuation and folly. Going out behind the town, by the Catholic chapel, are two other promising gold veins. The first is McGowan's, called the

NEW ENGLAND.

It contains 1,000 feet, and is owned principally by Mr. McGowan of Alameda, and Judge Sheppard of the Police Court in S. F. I tested some of this rock, not selected either, with Mr. McG. and found it prospected free gold (fine) very handsomely. The main tunnel is 200 feet, side one 80 feet, with a shaft in the latter 30 feet deep, from which they are taking excellent rock. There is also a strong copper vein running through this hill. Next beyond this comes the

GOLD AND SILVER MINING COMPANY.

I do not know the dimensions of this claim. The tunnel is in 100 feet, with a side cut 45 feet to avoid a streak of very hard rock, and 250 feet to go. It will cut the vein 106 feet deep. This tunnel unquestionably, shows the best workmanship I have yet seen anywhere, and that is saying a great deal. It is owned principally by Messrs Goldsmith and Dr. Boyee of Montgomery street, Mr. Gaylord, Superintendent. On the other side of the town, from here is a very large hill, which I understand carries a number of good veins. I can only now speak of one, which I visited with Mr. Jordan. I believe it is called the

AUSTRIAN VEIN.

It is owned by a company at Murphy's, who are working the claim on a safe principle. The rock, so far as tested and prospected, is known to be rich. The vein averages from 12 to 18 inches, which they are stripping and going to strip before they take it out. By this method they will obtain a correct knowledge of the depth and continuation of the vein, and if at last they find it warrants a mill the company will put one up; if not, they will have sufficient rock, anyhow, to pay all expenses incurred. I call that a very safe and prudent mode of working and well worthy of imitation. Such are the mines immediately in and around Murphy's. In my next, I shall speak of Douglass Flat, Vallecito, Melones, and Angels.

I cannot close, perhaps ought not, without saying that Murphy's holds its own, although the great glory of its placers has departed. It owns one of the handsomest school-houses in the State, and gives a good roll of pupils. The fine fire-proof hotel, kept by Messrs. Sperry & Perry, has the highest reputation as a mountain house, among the numerous visitors to the Big Trees, and well deserves that reputation. The proprietors are very gentlemanly men, and in my opinion, too good looking to be bachelors. I believe the ladies think the same. The Catholics here, as all through this section, have a handsome brick church. There is also a good armory. To myself the most interesting was Dr. Jones' cabinet. It's a perfect *bijou*. It contains two large teeth of a mastadon, in splendid preservation—a molar and incisor—which are alone worth going all the way to see. The Dr. is quite an enthusiast in mining, and like myself a great believer in the wealth of the country. I enjoyed an hour's chat with him very much. In conclusion, I beg to acknowledge the civilities of the Doctor, Judge Burrows, Messrs. Crispin, Jordan, Metz and others.

L. H.

[Written for the Mining and Scientific Press.]

Lincoln, Placer County.

BY A TRAVELER.

Messrs. Editors:—Before entering into a detailed account of the copper mines in the vicinity of Lincoln, allow me to tender my acknowledgements for the kind reception I received from your numerous friends at Lincoln, and to Mr. Lovy in particular.

The mines in this section, at present, are not exciting much interest, from the fact that a great many of the claims have suspended work until Spring. The only claims in operation which I visited are the Baker and Crosby, the Wilson and the Empire. Prospecting has been carried on to considerable extent, and with much energy, in several other claims in this vicinity. The three claims above mentioned run parallel with each other, and are divided by a belt of slate, showing that they are on three distinct and separate lodes. The croppings of the ledges are heavily impregnated with the sulphurets of copper and silver, and the mundic is also distinctly visible, which speaks well for the outside appearances. In general, the ore-bearing belts here are irregular in their dimensions, but constantly observing a certain degree of parallelism. I traced them for several miles. The Baker and Crosby have got their main shaft down 80 feet, but at present are taking out ore about 40 feet from the surface. I went into their shaft where they were drifting, and found that they had struck a belt of rich ore, composed principally of black oxide, sulphurets, and malachite. They are extracting enough ore to pay them to commence shipping, and have already sent some to your city, which made good returns. By sinking about 20 feet deeper I think they will strike a lode of pure yellow sulphurets.

About three and a half miles from the Baker and Crosby is the Wilson. This is where the first discovery was made. The company have done considerable work on their mine, having erected an engine for the purpose of pumping out the water, which at present troubles them considerably. They were not

at work at the time I was there, consequently I did not have a chance to descend into the shaft, which is about 80 feet deep. The rock which I examined is of the same character as that of the Baker and Crosby, and I was informed by the superintendent that they have found the lode.

After a hard ride of about three miles we reached the Empire. Of this claim, I am sorry to say, I lost my memorandum; yet it is sufficient to say that they have the same indications as the above mentioned claims. The working of the claim is ably conducted by the superintendent, who seems to fully understand his business. The placers in this vicinity pay well, but at present, like most other mining localities, are short of water—that element so highly essential to all placer diggings.

As I gave this section but a hasty visit, it is impossible for me to do justice to many claims which I traveled over, but could not stop to examine; yet in the Spring, when most of them will be at work, I intend giving them another call, and you may then expect a better report.

MARYSVILLE.

This city is rather dull at present, and it is impossible to find a place in California at this time of the year that is not, especially during this dry winter. With the completion of the railroad to Oroville, and the opening of the spring trade, times will be decidedly improved. I made a visit to the Masonic Hall, now in process of erection here, which, when completed, will be a fine and costly edifice. The main building is 81 feet 9 inches in length, 66 feet wide, and 63 feet high. The large hall will be 60x88 feet, in the clear, and 23 feet high. The total cost of the building will be about $24,000, and the structure will be second to but few buildings in the State. The Masonic Hall in Marysville will doubtless reflect credit on all who are concerned in its erection. J. M. W.

Written for the Mining and Scientific Press.]

The Great Desert and its Mines.

But few of our readers that have not made special investigations, have any true conception of the character and extent of the "Great American Desert." To the weary emigrant it is a remembrance that represents in his mind the *absence of everything desirable in this life.* To our people, as a social community, it is the great gulf that divides us from the friends of the old homesteads. To the naturalist, and the scientific investigator, it is a region of profound interest. There it lies in the bosom of the continent—desolate, barren and vast—its dreary waste made hideous by the blackened evidences of internal fire. Even its vegetation is forbidding, consisting principally of sage-brush and greasewood, that lays like a thin gray mist over hill and plain, giving to the whole scene a dull, smoky, monotonous appearance, that is extremely suggestive and uncomfortable. A man can never feel his own littleness so well as when traveling alone over those desert wilds. Look where he may, the same desolation presents itself; nothing that has life or beauty to be seen; his senses and sympathies rush back upon him in despair, like Noah's dove, unable to find anything to rest upon, and he at last realizes, for the first time in his life, that he is *really alone.*

Thus much by way of introduction to this hard-favored region of North America. We will now look at its boundaries and its geographical subdivisions.

This great desert extends from Southeastern Oregon to Northern Mexico, and from the foot-hills of the Sierra Madre and Rocky Mountains to the foot of the Sierra Nevada and San Bernardino ranges, having a northerly and southerly extent of over 800 miles, and a width from east to west of from 400 to 500 miles. Its area is over *three hundred thousand* square miles, including in its limits portions of Southern Oregon and Idaho, nearly all of Nevada, Utah and Arizona Territories, and more than one-half of Southern Californiа.

This vast region of desert, mountains and plains, is divided into two grand divisions by high and very irregular ridges and isolated ranges of mountains, connecting with the Sierra Nevada near Mono Lake, and running easterly near the thirty-eighth parallel of north latitude to Santa Clara Run; thence curving to the northeast until it unites with the dividing range between Green river and Salt Lake basin. This line forms the southern rim of the Great Basin, which includes at least one-half of Utah, three-fourths of Nevada, and a strip of Southern Oregon and Idaho. This is the northern grand division of the Great Desert.

The southern grand division comprises all of Nevada and Utah Territories south of the rim of the Great Basin, all of Southern California east of the San Bernardino range, and at least three-fourths of Arizona Territory. This grand division is sub-divided by the Colorado river, and is therefore called the Colorado Desert. This remarkable river is formed by the junction of Green and Grand rivers and the Little Colorado, all of which streams take their rise from the western watersheet of the Rocky Mountains. The united stream then flows westerly through the Black Cañon until it approaches within a few miles of the 115° of west longitude. From thence it turns abruptly to the south, and flows in a tolerably direct line to the Gulf of California. The river is navigable for light-draft steamers from the Gulf to the mouth of Black Cañon during the spring and summer months, a distance by the river of about 600 miles.

The Colorado is remarkable for its turbid waters and strong current. The water is always muddy, but the strangest feature of its muddiness is the fact that it changes the color of its mud, sometimes within a few hours, from a dark, grayish, loamy color to a bright chocolate red, and so thick that you can not see any object an inch under the surface of the water. It will retain this bright, red color from one or two to ten days, then gradually change back to the dark muddy color again. These sudden changes are caused by the heavy showers that prevail in the mountains during the summer months, on the head-waters of the Little Colorado, which is a small tributary that has its source in the red chocolate mountains in the northern portion of Arizona and western portion of New Mexico Territories. Some of its branches interlock with the northern branches of the Gila river, in the Apache country, north and east of the new gold mines, and is but little known by our people.

Whenever the clouds lay heavily on the mountains in which the Little Colorado takes its rise, the water will change to the bright red in about 24 hours afterwards. These facts cannot be observed with any certainty, however, below the mouth of Williams' Fork, the rain-clouds being shut off from view by intervening mountains. The volume of water in the Colorado is about the same as that in the Sacramento, though the channel is not so deep and regular, the current is much stronger, running at a rate of from three to five miles per hour. As a consequence the channel is full of shifting sand-bars, that makes its navigation slow, and in some seasons of the year difficult. During low water the sand-bars and channels are very much like those in Feather river below Marysville, and boats of the same class as those on the last named stream are the only ones at all suitable for the navigation of the Colorado. The narrow channels between sand-bars, and narrow passes between rocks, make side-wheel steamers impracticable. But this river, with all its sand-bars and mud to impede navigation, is the only base line of supply for Arizona Territory and the southern slope of the Great Desert. From this river must be drawn nearly all the supplies of food, clothing, tools and machinery for the miners of Arizona, whose rich and extensive mines must soon attract a large mining population. Then the Colorado of the Desert will swarm with boats, and its principal depots will be large cities.

In this article I have only attempted to give an outline or skeleton view of the Desert. In subsequent articles I will speak more particularly of the mines and their lines of communication.

C. E. Clayton.

[Written for the Mining and Scientific Press.]

Esmeralda Correspondence.

Aurora, January 23d, 1864.

Mr. Editor:—Having often thought that a truthful statement of the condition and prospects of this mining district might be desirable to the people of California, and beneficial to the inhabitants of this place, when disseminated through the columns of your widely circulated journal, I have concluded to send you this communication.

THE CLIMATE

Is pleasant; not too hot in summer, being always fanned by a cooling breeze during the day, while the evenings are cool and pleasant. We had a few light thunder showers last summer, and considerable dust, but seldom much wind to disturb it. Up to this time, the present winter, we have had beautiful weather, cold at night, but very pleasant during the day; but I cannot say what kind of weather we may have between this time and May. We hope, however, to have some big rain and snow-storms to furnish water for mining and mill purposes, during next summer.

THE MINES.

With regard to the mines, I will endeavor to state the truth as near as my judgment and experience will enable me to do so. As far as we have prospected there is no doubt about the number or the richness of the ledges, but, as yet, not one of them is more than half prospected. No shaft in this district, so far as I can learn, has been sunk over 200 feet, and none as deep as the gulches that surround the hills. There is one company that has sunk a shaft in the gulch 50 feet, which has struck first class *silver ore*—a circumstance which I think tends to prove that the best silver rock is below the base of the hills. I believe the great mistake is that companies don't sink deep enough. Even that old company, the Wide West, is not within 100 feet of being down to a level with the base of the hill, but I understand they have commenced sinking lately. There are very few tunnels, even, but what will have to sink on the ledges, when they strike them, to get first-class silver ore.

On Silver Hill, the Falls of Clyde have run through a 14-foot ledge, and a little further on have struck another. The next tunnel, the Ruth Windsor, is a good location, but I believe work has been discontinued. The next is the Oxford Beta, an equally good location, which is going ahead fast, and will soon strike the lead. The Budell, next to the Beta, is a good location, but work is discontinued here also. On the opposite side of the hill, at the lowest point of all, is the Gertrude, which is in some 700 feet. It will strike the ledges 300 feet lower than those just mentioned. West of the Gertrude is the Young America tunnel, which will strike two large ledges in less than a month, as they are pushing it along day and night. Further up, along the same gulch, are the Walworth, Great Western, Napoleon, Stanford, Toledo, Windsor and Peru, none of which, I believe, are in much over 300 feet. The Walworth has struck a large ledge, and are sinking deeper on it. The Hamlet is going ahead well, and has run through one small ledge, but is bound to strike two more in less than two months.

The ledges that are most prominent on Silver Hill, and that are being prospected with energy, are the Antelope, which I think is the best in the district for investment. The Iowa is about as good, but they have no mill. The Utah is a good old location, but the capital has not been judiciously expended upon it. A large sum has been expended trying to prove that the Cortez has been located on their ledge. I think it will be very expensive to prove it conclusively, if, indeed, they can do so at all. The Cedar, which runs parallel and close by it, is an old title and a rich ledge, but is not now being worked. The Yancey is working, and is a good claim, but not properly developed as yet. The Old Winnemucca is always still. The First North Extension, I believe, could be equal to almost anything in the district if it could be only properly managed; but the work that has been done don't amount to anything, as it has been done on a different ledge from the one they located, and which is now called the Blackberry, which is a first rate ledge. In the same locality is the Davenport. They have a dwelling house on the ground, also a blacksmith shop in their shaft-house. Everything seems to go along briskly night and day. I understand they are down about 70 feet, and have a ledge about nine feet wide. They have started another shaft, for the purpose of having a drift between them. Next to the last is the Comstock. They also have a house for the hands to live in, and are down some 75 feet, with a drift. In the same locality is the Hidalgo, a very promis-

ing claim, which is being worked vigorously, and is down over 80 feet. They have a large lot of rock to crush. A little further north is the Silver Hill, which is an old location, and is being constantly worked. There is every prospect of its coming out big. The Union tunnel, running in from the gulch below, is always going ahead, and I hear they have struck a good ledge.

It is unnecessary for me to mention the Del Monte or even the Crocket, as they are well known. The Garibaldi is producing fine rock, extremely rich. The mine seems to be well managed, at present. The Dayton is a good old location. They have a very large ledge, which is easily worked. I think all that is necessary to bring it out, is a little capital expended upon it. The Pensylvania, Unadilla, Enterprise, Howard and Monroe & Thatcher tunnels running into the hill, are all bound to strike soon, as they are all in from 600 to 800 feet, and are being worked night and day.

The great evil here is the greed of individuals to hold ten times as much ground as they can work in a proper manner. Another great evil arises from the reports of mining claims in our local papers. About three fourths of such reports are mischievous fabrications or false information, derived from interested parties who report claims as being worked, which have remained for four, five or perhaps six months idle, and oftentimes to the little astonishment of the owners themselves. It is very bad policy for the people of any district to pursue such a course. Knowing that when these misrepresentations are found out, it causes a doubt in the minds of people at a distance of *all* reports of claims, even such as are true, as they are unable to distinguish between the true and the false report.

There is no doubt with regard to the value of our mines and if we only had the capital we should soon astonish the world. We have any quantity of Del Montes, if they were only developed.

An Observer.

California Coal, Iron and Copper.

Mr. Editor:—I observe in your paper of last week, a refereuce to one of my suggestions in regard to California Coal. "The step grate" referred to in my letter of Sept. 21st, '63, is no less available for use without a blast. Among other improvements noticed in your paper, and on which I promised further information, was the use of iron reduced from oxides without fusion, technically known as iron sponge, in the reduction of copper by precipitation. This was introduced in Norway, but works have recently been established at Warington, England, for Messrs. Roberts, Dale & Co., in which a new modification is added, sufficient coal is used to prevent the iron even clotting together, and it is employed loosely as a powder. The economy of this preparation of iron is evident. A Poor Chemist.

San Francisco, Feb. 10, 1864.

More Copper Shipments.—The first shipment from the Oriental Copper Mine, in Amador county, is now arriving in this city. This ore has been selected, and will average 23 per cent. in quality. It was taken from shaft No. 2. The company have a large lot of No. 2 ore at the mine. All that has thus far been raised has been taken from the shafts. No drifts have yet been commenced.

Correspondence.—Thanks to "An Observer," "M.," "J. E. C.," "L. H.," "J. M. W.," "F. W." and "R. W. D." for their favors this week. Valuable communications have also been received from "H. O. G. S." and "Quartz," Humboldt, "L. H.," Calaveras Co., and other correspondents. Also, extracts from R. R. letters.

An alarming report that the fleet of British war steamers, pretended to have been built for the Chinese Government, is now preparing for an attack on San Francisco, lacks confirmation.

A severe accident occurred from a cave in the Ophir mine, at Virginia City, on the 3d. A man named Wm. Bone was killed and several others injured.

It is estimated that the steamer Constitution, for Panama, will carry out over $1,000,000 to-day.

☞ Parties desiring to learn the place of business of any Mining Company, should call upon us.

MINING GOSSIP.

EDITED BY FRANK WARDDELL.

[In this department of the Mining and Scientific Press we propose to give various and brief accounts of mining companies, and shall, under all circumstances, write *plainly* respecting their merits and de-merits; furthermore, we shall bring to light such transactions as may come within our knowledge regarding the "Bulling and Bearing" system and the "underground" actions of both Trustees and Brokers. We are vain enough to suppose, at all events, that we have the "inside track," and shall, without *hesitancy or fear*, give to the public, from time to time, a peep behind the scenes whenever the occasion justifies. If, in doing so, at any time we have fallen in error as to our reports, and it can be so proven, nothing will afford us more pleasure than to make the "*amende honorable*" by correcting the same. We shall feel under obligations to those who are interested in stock if they will communicate to us such items as may come under their observations, and which will prove interesting to our readers. This department is open for free discussion to "one and all." Our object is to render justice to every one. Communications, in all cases, must contain the author's name and address to insure publication, which will be kept *strictly confidential*—otherwise no notice will be taken of them.]

Real Del Monte and What we Know of It.—Again we are compelled to refer to this stock, owing to the prominent position it occupies in the market at present; and in consequence of the numerous reports which have been circulated during the past week respecting the causes of its great fluctuations. We now state what we know concerning the same for the benefit of those interested. Our information is derived from a gentleman of high standing in the community, from one who has purchased heavily in the mine; and, furthermore, from one upon whose statements the utmost reliance can be placed. Our informant, not being satisfied with the outside reports, despatched a special agent to the mines, with instructions to give it a careful and thorough examination, after which to report to him at once, and exactly how matters were. This agent, who, by the by, is a person well versed in the art of mining, proceeded to the mine, and, upon examination, discovered that for a distance of twenty to thirty feet, a large quantity of white quartz was visible, following which, was over one hundred and fifty feet of as good and rich rock as he ever desired to look upon. His advice to his principal was, under no consideration to sell one foot of his stock, no matter how the market stood, for eventually it must prove very valuable. As luck would have it, the agent was just in time to make the above examination; for on the next day *the trustees caused the mine to be closed to all outsiders*. This, as a matter of course, got noised upon our streets and aroused the suspicions of the majority of purchasers, and the cry went forth that the mine had given out, etc., etc. If one half the accounts we have heard should be written out by us, it would take at least two of our editions to publish them. Now, we ask, what right had the trustees to close up the mine? What right have they to keep matters so quiet, and to conduct all their transactions *sub rosa?* Why dont they open their books and their minds at the same time to the anxious stockholders and let them know how things are going. The stockholders should *demand* it, and not allow themselves to be kept any longer in ignorance. We have not the least doubt but the mine is as represented above by the agent. No, the trustees are playing a little game among themselves to "dupe" outsiders and in the end to "feather their own nests." It is time that such infamous and outrageous species of modern, genteel fraud in the management of mining companies should be done away with. Let the people make an example of this company. The idea of sacrificing people's money with impunity, when a report from the superintendent of a mine would obviate and remedy the evil, is an imposition of the worst character, and it is time the "game" was "blocked." Let the holders of Real Del Monte call a meeting and, in a body, demand an explanation and their rights—as stockholders. Then and not till then, gentlemen! will you know how matters stand.

The Aurora *Times* of Feb. 6th contains the following paragraph, fully sustaining the conclusions of our informant:—The bulls and bears of the California metropolis have got the Del Monte in their clutches, we suppose. A deep game is being played in the affairs of that company. It is certain there is no let up to their rich and extensive mine. The ledge shows no signs of giving out, and the rock is richer than ever. Their magnificent new mill, and also the old Starr & Tucker mill purchased by the Del Monte Company, are running steadily, day and night, on the rock from their rich mine, turning out large and beautiful silver bricks at every clean-up. Real Del Monte stock was never more valuable than it is to-day, although quoted at less than $200 per share. [Quoted in our reports at only $72.50 per share.]

Open Board.—This new Board will commence operations for the first time on Monday, Feb. 15th. Mr. Jones, at one time connected with the well known auction house of Messrs. Haggerty, Draper & Jones of New York, will act in the capacity of auctioneer of this Board. We trust that Mr. Wallace will meet with success in his new undertaking. We refer our readers to the advertisement of Mr. Wallace in another column.

Wont Work.—The S. F. Board of Brokers have again come back to their old regulations, by doing away with the "Open Board" system. They have given it a fair trial and found that it was more detrimental than beneficial. While an "Open Board" it only acted as a rendezvous for outsiders to gain information respecting the market, to guide them in their operations upon the street.

Lively Times may be expected between the 15th and 28th of the present month, when the immense number of "high figure" Real Del Monte contracts become due. If our brokers can "carry the load" and thus "hold their own" they are a stauncher body of men than the public generally give them the credit for. We sincerely trust however they will be able to do so and that none of our friends will be "broke in the Board," for non fulfillment of contracts.

Daney G. and S. M. Co.—As the question is asked, why this stock went up in the market? we answer that we know of no reason, without it was on account of their having taken the water out of their shaft. We think it is only a temporary rise, although we are all liable to be mistaken, especially in these flighty stock times.

In Luck.—Mr. Shotwell, long connected with the mercantile house of Messrs. Alsop & Co. of this city, as cashier, has received the appointment of secretary of the Gould & Curry Mining Co., at the comfortable salary of $5,000 per annum. Really! not so bad to take these hard times.

Dividends.—A resolution has been passed by the Pacific Board of Brokers to prohibit the purchasing and selling of stock dividends. We are glad to hear it, as we always considered this the worst feature, next to "selling short," in stock transactions.

East Lynn G. and S. M. Co., Owens River.—This stock is becoming quite a favorite in the market and is eagerly sought after at prices varying from six to eight dollars per share. We predicted as much some time ago and are now pleased to witness our ideas coming out correct.

New York Consolidated, Esmeralda.—This company are progressing finely with their work and reports received here are of the most encouraging nature. We wish the "boys" success in their enterprise for they are hard workers and deserve a rich reward.

Chollar.—Up to the latest advices they have not as yet found their lead. We hope they will be successful soon or else many will be afflicted (if not already) with the Chollar-a-morbus.

Napoleon Copper Company.—At a meeting of the shareholders of the Napoleon Copper Mining Company, held on the evening of the 11th instant, the following gentlemen were elected trustees for the ensuing year: Charles F. Lott, Wm. L. Dall, W. F. Babcock, Theo. F. Baugh, and Jessee Holliday.

Lady Bryan Stock.—This "lady" still continues a favorite with the brokers, and has many admirers and advocates. No great excitement will take place in stock until after they obtain the result from their rock now crushing.

Failure.—We are sorry to announce the failure of Messrs. D. C. Williams & Co., "Stock Brokers," Montgomery street. Their liabilities are, we learn, not very large. Ill luck seems to follow this firm, for they have been obliged to suspend payment twice, to our knowledge, within the past year or so. We doubt not they will soon adjust their affairs and resume business again.

Summary of Mining News.

El Dorado.—A quantity of picked quartz was recently crushed from the Blue Bank Lead on Webber creek, which paid at the rate of $25,500 to the ton. The company have 100 tons of rock, of extraordinary richness at the mouth of their tunnel. Persons desirous of examining the rock will have no occasion to use magnifying glasses.

Placer.—The Folsom *Telegraph* says that two new ledges have recently been discovered in the neighborhood of Rock Springs, which assay nearly $200 in gold and silver. The discoverers are two old miners named Clifford and James.

Nevada.—The editorial correspondence of the *Irish News* furnishes the following interesting facts with regard to the two leading gold mines in California, which are located in Grass Valley: The Allison Ranch gold mine is on the left bank of Wolf creek, about three miles south of the town. The present proprietors were the original discoverers, in 1855, viz: Messrs. Colbert, Daniels, Fahay, Stanton, and the brothers Donahue. A few months after they discovered the mine they offered to sell for $1,000, but could not get a purchaser. Shortly after, they crushed 18 tons, and it yielded $6,000; and again 60 tons produced $23,000. They then erected their mill and machinery. Since then it has yielded nearly two millions of dollars, and yet it gives no signs of exhaustation. It is managed with economy and skill under the superintendence of Phillip Galloway, Esq. This mine has now in its employ over 200 men in its various departments. Around the mill is quite a small town, with boarding houses, hotels etc. The shafts to this mine are now nearly 500 feet deep. The Rocky Bar or Massachusetts Hill mine is the most extensive in the vicinity of Grass Valley. At present it employs nearly 300 men. It was lying idle for two years in consequence of the claim adjoining it, the Mount Hope, being in litigation, as one of the main shafts of the Mount Hope Company was necessary to be used by the Massachusetts Company for the effective working of their mine. Within two or three months past, this hindrance was removed, and the mine is now worked, yielding a rich reward to the labor and skill applied to it. Messrs. Watt, Connolly and O'Keefe are proprietors of this mine. New machinery and mill gearing to the amount of $40,000 has been added to the mill of this company.

The last mentioned mine will compare favorably in richness with the Allison Ranch, and either may be looked upon as equal in richness to any ground of equal extent in Washoe.

Sierra.—The *Mountain Messenger* says that the Mountaineer company, at Howland Flat, took out last week $2,500, for 26 hour's washing, and have from $12,000 to $15,000 of the same kind of dirt in their dump shed. Hibernia claim is paying well, and have at the lowest figure $30,000 worth of dirt out and ready for washing. A correspondent of the same paper, writing from the Middle Fork of the Yuba, says more work is being done in that section than was anticipated. Several companies have opened claims in the river banks, and found very good pay where the ground was supposed to be worthless. The claim of Reipe & Co. is paying half an ounce a day to the hand; that of the Land Pirate about the same. The Sierra *Democrat* says that the Young America Mining Company have recently completed a tunnel which opens up a bed of auriferous gravel hitherto untouched, and which appearances strongly indicate is extensive, underlying the ridge between Sawmill Flat and Wet Ravine. Should this prove to be the case, this discovery is among the most important made in the county for years past. The Young America boys have great faith in the permanency and extent of the diggings, and are putting their claims in shape for prosecuting work on a big scale.

Shasta.—The *Courier* says that a new ledge of gold-bearing quartz has been discovered on Clear creek, about three miles from Whiskytown, which is pronounced decidedly rich. The exact whereabouts of the ledge has not yet been revealed, as the discoverers feel safe in its hidden locality, and are not yet ready to "locate." The Excelsior Company are progressing rapidly with their tunnel. The first snow storm of the season commenced at this place on the 29th.

Tehama.—The Red Bluff *Independent* says that the Pittsburg copper mines are creating quite a stir in that town. The rock of the Killinger Company assays $117 per ton. Other companies are not far behind. They are nearly all busy at work, and good things are expected in the Spring. There are good prospects of machinery soon being put up in that district. Quite a number of citizens of Sacramento and San Francisco are interested.

Siskiyou.—The miners in this county are discovering new leads. The Yreka *Journal* of January 27th says that new leads of silver and gold-bearing rock have lately been discovered in different portions of this county, which apparently promise great richness. Last week, the Lucre lead, on Empire creek, a small tributary of the Klamath, below the mouth of Humbug creek, was discovered, and bids fair to excel in richness the richest in Washoe. If miners would prospect and work California mines as perseveringly as they do Washoe, we should soon be able to prove conclusively that the silver mines of California are well worthy the attention of capitalists.

The Coast Range.—A gentleman who has recently been prospecting in the Coast Range, in Mendocino and Lake counties, informs the Folsom *Telegraph* that it is a region of wonderful mineral richness, it seeming to him one vast bed of mineral composed of cinnabar, copper, silver and gold. The grizzly however, now holds undisputed sway there, twenty having been seen in a single day. Other varieties of game are also abundant, supposed to have been driven thither from settled portions of the State.

Tulare.—The reports of important discoveries in the vicinity of Visalia, are attracting considerable attention. The *Delta* of January 28th, says that the citizens of that place have been much excited for the past three weeks over the reported discovery of gold, silver and copper leads in the foothills and spurs of the Sierra east of the town. "Quite a number of claims have been taken up, and probably 150 men are at present on the ground, either hunting leads or digging into those already discovered. Many specimens of gold and silver ore have been shown us, which are very rich, especially the latter. Of copper ore we are no judge, but others assure us that the indications are very good. The silver leads range from three to thirty feet in thickness. A large load of the gold and silver rock has been brought into town which assays very rich, especially the latter, which assays $200 to the ton." We expect soon to be placed in possession of the facts in relation to these reported discoveries, by a gentleman fully competent to judge of their merits.

Los Angeles.—Encouraging reports of mining discoveries are continually coming in from Los Angeles. What promises to be an important copper discovery has been made within twelve miles of the city.

Tuolumne.—The *Courier* states that a ledge of gold bearing quartz was recently discovered near Columbia, which showed much gold in the croppings. It was estimated that sixty or seventy thousand dollars was in sight, upon the surface. It was accidently discovered by a party who were hunting for cattle.

Important Mining Discovery.—James Say, the discoverer of the now famous Desert District, near Virginia City, is said to have discovered, some three weeks since, a still richer district, a few miles to the northeast of the Desert. The Virginia *Union* says that Mr. S. gives it as his opinion that it is richer than even Gold Hill or Virginia City. The specimens which he brings in are exceedingly rich, in the form of black sulphurets. The district has been christened Sebastopol. It is located twelve miles east of Truckee river, and seven from Hot Springs.

Powder.—Over 7,000 kegs of blasting powder arrived in this port on Wednesday, but the price is still held up to $10 per keg. This arrival, in connection with several large invoices now on the way, ought to relieve all stringency in the powder market.

We would suggest to our Stockton correspondent that he should put his "specs" on, and look a little closer to the paragraph he criticises. We printed "6.20" and not "620." There is a wide difference between the two amounts.

AN EXTRAORDINARY WINTER.

The small amount of rain that has fallen thus far the present season, is without a parallel since the advent of the gold-diggers on this coast, and constitutes a matter of serious apprehension among farmers and much discouragement among placer miners. Considerable speculation was indulged in during the early part of the season as to the probable character of the winter, and we believe the general impression was that we were to have a mild one. Old settlers asserted that a dry fall was always followed by a mild winter. The disinclination of the water-fowl to move south as freely as usual, was also given as an infallible sign to the same effect. The result thus far has fully proved the correctness of these predictions.

The placer miners and farmers, everywhere, are making doleful complaints on account of the drouth, and with reason, for the operations of the miners in many localities are greatly impeded, while cattle are dying by thousands, especially in the extreme southern portions of the State. The Los Angeles *Star*, as late as January 23d, says that it is truly melancholy to notice the great number of cattle that have died lately on different ranches throughout that country. It is admitted that, on some, one-half of the stock have perished from hunger, and there is great apprehension that many more will yet be lost if a favorable rain should not shortly come. In passing over the plains, many of the cattle appear like skeletons, and seem unable to move far from the springs and water courses, from which they receive nearly all that prolongs life.

Farther up in the Tulare Valley the suffering among the cattle has not been so severe, although much loss has been entailed. Within the past five weeks enough rain has fallen to secure the safety of cattle for another year. Reports from Livermore and San Joaquin Valleys are to the same effect. In the San José Valley, according to the *Patriot* of January 27th, farming prospects are exceedingly gloomy. The extraordinary drouth continues. But two falls of rain of any account have occurred during the season—one in November, and one about the last of December, since which time dry, cloudless weather has been experienced. The present has been pronounced the dryest season for many years. The *Patriot* predicts that there will yet be much suffering in that region unless the rains come soon and copiously. The central and northern portions of the State have been more favored with the aqueous element, but still in quantities quite insufficient for the actual need of the country. The extraordinary mildness and beauty of the winter, in this city, is the remark and wonder of all. The Sacramento river, we believe, was never before at so low a stage, at this season of the year, since steam navigation was first attempted upon its waters.

The mildness of the winter has extended into and over the Sierra and quite to the foot of the Rocky Mountains. The reports from Washoe are to the effect that so beautiful and mild a winter has never before been witnessed there by even that ubiquitous biped, the "oldest inhabitant." In that region, a mild and dry winter is a blessing, as it affords increased facilities for carrying on the class of mining which constitutes almost the only employment there. A lively spring and summer in Washoe is predicted in consequence. The same comparative degree of mildness appears to exist throughout Esmeralda, Humboldt and Reese River.

From the Plains, to the east of the Rocky Mountains, we hear quite a different story, to the effect that so early and severe a winter has never before been known. The same reports reach us from the Atlantic seaboard. The unusual detention of the overland mails in the vicinity of the Mississippi and Missouri rivers, and the blocking up of railways, in one instance for ten days, fully attests the truth of these reports.

Mechanical Department.

THE SAWMILL.

How few realize what the sawmill has done for society, the value of its services, or the important part which it plays in every forward movement of human progress. It is an invention almost cotemporaneous with the infancy of civilization, and is an invariable accompaniment of man in all his pioneer enterprises. The axe, alone, precedes it in the construction of the rude cabin or log hut of the pioneer; but not till the sawmill is introduced do we find the conveniences and comforts of a home; not till then do framed buildings and villages arise. The sawmill has been most aptly termed "civilization's pioneer machine." It is the precursor of the carpenter, wheelwright and turner, the painter, the joiner, and legions of other callings and professions. It preceded the gold-seekers of California, and, in fact, was the direct means of making known to the world the existence of the precious metals in the mountains of the Pacific slope. It follows close upon the tracks of our adventurous miners, and our magnificent forests are fast melting away at its approach. Already we have some 225 of these indispensable machines among us, which turn out at an aggregate of not less than 120,000,000 feet of lumber annually.

Where the sawmill is not, progress is unknown; where its presence is most frequent, we generally behold a corresponding degree of activity and advancement. The comparative absence of this machine throughout the equatorial latitudes of our continent may be looked upon as an important cause of the lack of progressive civilization in those otherwise highly favored regions.

Surrounded as we are in California, and throughout the entire Pacific slope, with the most magnificent forests to be found upon the earth, may we not, with reason, look to this as one of the chief sources of our future prosperity. By aid of the numerous railroads in operation and prospect, these vast stores of lumber may soon be delivered at almost any desirable point, and will become available for shipment to the numerous points on the Pacific where lumber is wanting, and where the demand for which must increase in exact proportion with their progress in civilization and arts.

It is difficult to fix the time of the introduction of the sawmill. About the earliest account we have of it, is its employment in the mountains of Sweden and Norway, where it is spoken of by an English writer as an engine "very necessary to be in a great Towne or Forrest, to cut Timber, whether into planks or otherwise."

The ancients used marble to an enormous extent, and, according to Ausonius, mills driven by water power were employed in sawing it into slabs. But we have no record of any similar process being applied to timber. The axe appears to have been the chief instrument employed in early times for shaping building materials prepared from wood.

The modern sawmill, driven by steam, is a very different machine from that set up in the primeval forests of the north of Europe, or even by the Pilgrims, who first erected their dwellings on the borders of the Atlantic States. We have by us a view of one of those early sawmills, set up in Virginia, upwards of two centuries ago, which at some future time we propose to place in the hands of the engraver for illustration in the columns of the Press.

Copper Coating Armor Plates.—Since our remarks, two weeks since, upon the Copper coating of armor plates, etc., we have noticed the following paragraph in the *London Mining Journal*, with reference to experiments now in progress in that direction:—"It is stated that the target ship in Porchester Bay has been placed in dock for the purpose of removing from under her quarters and landing the two armor-plates which some three months since were coated with copper by the Walenn electro-alkaline process. A report of the condition of the plates will now be prepared by the dockyard officials, and forwarded to the Admiralty for their information. The important electro-metallurgical experiment was entertained and carried out by the Admiralty in the fullest and most liberal sense, both as regards the inventor and the application of his principle; but serious fears are entertained that the principle of the invention has utterly failed in the test of its submission in salt water."

Railway Gradients.—The power possessed by locomotives to ascend steep gradients has been demonstrated in a most remarkable manner within the past two or three years. The experiment on a Chilean railroad, which was made some eighteen months since, greatly astonished engineers everywhere. But a still more remarkable development of the surmounting power of the locomotive has quite recently been promulgated by the engineers of the Bhore Ghaut Incline on the great India Railroad. The incline attains at one long lift the great height of 1,832 feet, which is the greatest elevation attained by any railway incline. It is fifteen and a half miles long, and the average gradient consequently is 1 to 45:39. The success of such experiments as those above noticed should forever set at rest all cavils against the engineering difficulties to be encountered in the construction of a practicable railroad over the Sierra Nevada.

Case-Hardening Iron.—A new method of case-hardening iron has been patented in Germany by M. Martignoni. The process consists in rubbing the surface of the iron, while at a red heat, with the following composition: 5 parts of cow hoof, reduced to fine shavings; 5 parts of quinquina; 2-5 parts of common sea salt; 1-5 parts of salt-peter; and 10 parts of coarse black soap. This mixture is formed into a paste, and applied by a roller, by which it is smeared. The iron is subsequently tempered in cold water.

Economy of Fuel—Smelting Iron.—A correspondent of the *United States Railroad and Mining Register* communicates a long article on the waste of coal used for smelting iron, and ridicules the construction of the common smelting furnaces, asserting that they are worthy of the days of Tubal Cain, who lived five thousand years ago. He states that two-and-a-half tuns of coal are employed to reduce one tun of iron from the ore, while one tun ought to be sufficient if properly managed. He suggests that a saving of fuel might be effected on the principles applied in the use of the blow-pipe.

Safety Valves Dangerous.—The London *Engineer*, speaking of boiler appliances, says: "It is dangerous to open a large safety valve suddenly." The general idea of safety connected with the use of a safety valve is that when the steam in the boiler attains to a certain fixed rate of pressure, it shall open suddenly and allow the steam to escape so as to reduce the dangerous pressure. It is known to engineers that if a safety valve is raised suddenly, under great pressure, the water is liable to foam and flow out with the steam, in the same manner that soda-water or spruce beer in a bottle, charged with carbonic acid gas, will be carried out with the gas when the cork is drawn. It is upon this principle seemingly that Clark has founded his projectile theory of boiler explosions. No other danger is entertained by engineers in raising the safety valve suddenly than the escape of water from the boiler.

Hydraulic Water Power seems to be fast coming into practical use. As further evidence of success in this direction, we notice that the printing press of the New Haven *Register* is run by water power, supplied by an inch perforation of the street main; and after a long trial the contrivance is pronounced a perfect success.

The longest and oldest chain bridge in the world is said to be at Kingtung, in China, where it forms a perfect road from the top of one lofty mountain to the top of another.

THE NEW STOCK AND EXCHANGE BOARD.

The interior of this building wears an air of pleasantness and bids fair to become a favorite place for those who deal in "feet." The salesroom is 50 by 33 feet; the dome for lighting the building is 20 feet high. At the extreme end of the room are the desks for the President, Secretary, and Caller. In the center of the room, or forum, is the place where brokers congregate, which is separated by a railing on either side for the lobby members.

Mr. Wallace, the projector of this Board, is indefatigable in his endeavors to carry out in full this novel arrangement for the sale of stocks, so happily conceived by him, and we trust he will meet with a liberal patronage.

With the view of an early extension of this establishment, which he thinks will soon become necessary, he has secured a place in the rear of the present room, 35 by 34 feet, so that when the present place becomes too contracted, out goes the wall, and in comes more "feet." We give below the names of those who have taken offices in this building:

No. 1—Howard & Sanchez, and H. S. Saunders, brokers.
No. 2—Geo. Johnson & Co., together with the Office of the Exchange.
No. 3—H. S. Homans, notary.
No. 4—D. H. Mitchell, E. H. Shaw, and George W. Paget, brokers.
No. 5—Wm. Ward Battles, broker.
No. 6—Messrs. Paugh, Sturtevant & Stewart, brokers.
No. 7—W. D. Robertson and E. H. Wilson, brokers.
No. 8—Thos. Ogg Shaw, D. M Hosmer, and J. W. Myrick, brokers.
No. 9—Wm. Thompson, broker.
No. 10—F. J. Hughes and C. H. Watson, brokers.
No. 11—J. Fitch, S. Green, Chas. Littler, and John Minturn, brokers.
No. 12—J. de Sta Marina and Henry Harris,
No. 14—J. M. Duff & Co., brokers.

Exposure of a Fraud upon Science.—A San Francisco evening paper, not long since, presented a collocation of the evidences tending to show the existence of man in California prior to the historic period. A brief review of the said article in the Press of the 30th of January naturally suggests a duty which should animate every true lover of science to place such evidences upon their proper basis. The statement that "an ancient skillet, made of lava stone and hard as iron, circular in form, and with a spout and three legs, was found in washing out a deep claim at Forest Hill," had its visible representation in the very utensil itself, at an exhibition of the State Agricultural Society, a few years ago. It showed the evident marks of modern ingenuity (not Indian-hew-it-eh), and had apparently been easily chiseled out of porous basalt, which rock is nowhere found beneath or mingled with the gravel deposits, but always capping them. Therefore, the skillet, or its original form, could not have been found buried at any great depth, or had a very ancient existence. It pleased me to afterwards learn that the owner was meeting with poor success in his attempts to dispose of the *ancient* relic. M.

A Wasuoe Nabob.—The Virginia *Enterprise*, in describing the palatial mansion of Sandy Bowers, lately built on the shores of Lake Tahoe, says the bill for furnishing material and fitting up this fine mansion will amount to over $10,000 for upholster work alone. The curtains for the parlor windows will cost $600 each, and there are six windows in all—$3,600 for the curtains of one room! There are in all thirty-six windows to be furnished with curtains—but all the curtains are not, of course, so costly as those of the parlor. The whole cost of the house, when fully fitted up, will be something over $250,000; but a man whose income is $70,000 per month, or nearly one million per annum, can very well afford to fit up a house in any style to suit his taste.

Patent Department.

Apparatus for Operating a Gun Carriage—*A California Invention.*—S. T. Ashley, of this city, has obtained letters patent for an improved apparatus for the above mentioned purpose, wherein he claims the gearing together of the front and back traverse wheels by means of a system of gearing, in such a manner that the power is applied to produce the motion of both sets of wheels simultaneously, by a power applied through a crank shaft or its equivalent at or near the end of the chasis, or in such position as may be most convenient, substantially as and for the purposes specified.

A New Amalgamator.—J. B. Attwater, of Chicago, Illinois, has invented and patented an Amalgamator, which consists of the employment or use of one or more reciprocating frames, provided with arms or leaders having bars or their equivalent attached to form elevators, in connection with a tray or box, all arranged to operate in the manner substantially as and for the purpose set forth in his specifications.

An Apparatus for Washing Ores.—Philip Scheuevman, of Hancock, Michigan, has obtained a patent for a machine for washing ores, in which water is forced up through screens on which the ore or pulp is discharged from the stamps. We should judge this invention to be one calculated more particularly for washing or concentrating ores of copper.

Apparatus for Generating Carbonic Acid.—Letters patent have been granted to M. Auguste Morel, Brussells, Engineer, for the invention of "improvements in apparatus for generating carbonic acid." This improvement relates to an improved generator of carbonic acid which is self-supplying and regulates itself at a constant pressure without any supervision, and producing a regular flow of gas without the aid of a gas holder or regulator. The invention is capable of very numerous applications; first, it may be applied as a small meter in which the compressed gas is substituted for steam or compressed air. Secondly, the gas so obtained may be applied in baths, also for decanting and raising alcoholic and fermentable liquids to any distance or hight free from pernicious contact with air; and lastly, for saturating all kinds of liquids with gas varying in amount and pressure; in this case the gas should be introduced at the bottom of the reservoir to be saturated, whence it traverses the liquids in bubbles so as to change without agitating it; it may also be used for raising the liquid to a hight in proportion to the initial pressure. By the simple addition of a two-way cock, one communicating with the gas and the other with the liquid, the pipes may always be kept empty.

Fire Bars.—Letters patent have been granted to Mr. Daniel Mybrea, Lancaster, England, for the invention of "improvements in fire bars or furnace grids." The cross bars are made of a waved or corrugated shape, with a groove on the upper surface to catch or collect the ashes from the fuel, which ashes, being a non-conductor of heat, preserves the bars from being soon consumed or burned, and also prevents the coals from clinkering. The side bars and cross bars are cast together, so as to form a frame-work or grid for the bottom of the furnace, and the side bars or frame are made either straight or corrugated, but in either case a groove is made on the ashes. By means of this plan the bars can be made much lighter than the usual form, while ensuring economy of fuel and metal, and prevent the clinkering of the coals. The corrugated surface of the bars, by presenting the greatest amount of surface to the action of the atmosphere, keeps them cool.

A New kind of friction matches has been invented which will not ignite unless rubbed against a surface that has been peculiarly prepared with chemicals. The invention is to provide against accidental ignition.

First Dividend.—The Jefferson Gold Mining Company, at Brown's Valley, declared its first dividend on the 2d instant, of $10 to the foot. This is considered by the stockholders a very satisfactory result. The company has recently erected a fine mill at an expense of $25,000.

The Mining and Scientific Press Patent Agency,

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief.....	20
On every appeal to the Judges of Circuit Court, D. C.....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

C. W. M. SMITH. W. B. EWER. A. T. DEWEY.

DEWEY & CO., Publishers.

OFFICE in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms of Subscription:

One copy, per annum, in advance,.....$5 00
One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers.☜

Terms in Advance.—Having adopted the cash system, ALL pay ments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

AMERICAN AND FOREIGN PATENTS.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

FAVORABLE TO INVENTORS.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

San Francisco:
Saturday Morning, February 13, 1864.

"STATE POLYTECHNIC SCHOOL."

The Board of Commissioners appointed by the last Legislature to report "upon the feasibility of establishing a State University, embracing an Agricultural College, a School of Mines, and a Museum," have reported in favor of uniting the "University Fund" of the State with the fund to be derived from the Congressional land donation for a college of agriculture and art, the funds to be consolidated for the establishment of a State institution, to be styled the "State Polytechnic School." They also recommend, and with good reason, San Francisco for the the location of the same. It is further recommended that another Board be appointed by the present Legislature to report a plan of a college or school to the next Legislature, said Board to consist of the Governor, Surveyor-General, Superintendent of Public Instruction, and the State Geologist, with three other persons, to be named, one by the State Agricultural Society, one by the Mechanics' Institute, and one by the Academy of Natural Sciences.

The recommendation of the present board is a most excellent one; the only regret is that the plan which may be submitted by the new Board recommended, cannot be acted upon at an earlier day. The name suggested—"State Polytechnic School"—is, of all others, the most appropriate for a school of the character proposed. The term "Polytechnic" is derived from two Greek words, signifying *many* and *art*—comprehending many arts; and is most peculiarly applicable to a school in which many branches of art or science are taught. The suggestion that this school should be established upon an independent basis should in no wise be departed from. We want a purely California school, entirely independent of any existing institution, and having no connection whatever with any classical course of instruction.

No State in the world would derive more benefit from a school of the above description than California, and should we be so fortunate as to succeed in establishing one upon a sound and permanent basis there is good reason for believing the California School of Mines, or "Polytechnic School," as we would prefer to call it, would soon be able to produce graduates, who would lose nothing in comparison with those of the most celebrated institutions of similar character in Europe.

California—and in employing this term we refer to the entire Pacific slope—needs a school peculiarly her own, and suited to her anomalous position as a mining State in its early stage of development. We need, and should be able to avail ourselves, of the accumulated experience of older mining localities; but it is more important, for the present, that the attention of California miners should be particularly directed to the conditions of a new country, to a more general knowledge of minerals, their various combinations and their accidental positions upon and near the surface, and to the opening and working of new mines. The general drift of instruction in English and continental schools has more particular refereuce to old and pretty thoroughly prospected localities, and to the working of mines at a great depth.

A mining and agricultural school may very properly be united in one institution, as the studies in pure chemistry, geology, mineralogy, physics and mechanics, are required by both, and to the same degree. It would be quite as easy for a lecturer to instruct a large number of pupils as a smaller number; indeed, according to all ordinary experience in teaching, it is far more pleasant and agreeable to speak to sixty pupils than to twenty. Agriculture and mining is nothing less than an application of the above studies. Practice in the chemical laboratory would be almost precisely the same for both classes of students. In order that a mining engineer may be able to take up any rock and ascertain its constituent elements, he must be acquainted with analytical chemistry, and the amalgamator must also be possessed of the same knowledge before he can understandingly work his ores. A thorough chemical knowledge is indispensable to both of these individuals. The agriculturist also requires a thorough knowledge of chemistry, in all its branches, both organic and inorganic; but *he* would naturally apply his knowledge to the analysis of soils and minerals, and sometimes to the different productions of his soil. Surveying would also be another branch, which would be taught in common to both classes of students and by the same teacher. In short, by the combination to which we have alluded, we see a great saving in expenditure, and no valid objections. We propose, in future numbers, to throw out some hints as to the proper management of a school of this description, and to lay before our readers the course of instruction pursued in similar schools in Europe.

The Late E. B. Goddard, Esq.

In the decease of Mr. Goddard, which took place at Oakland on the morning of the 8th instant, of disease of the heart, this city has lost one of its most useful and substantial citizens. Mr. Goddard was one of the pioneers of California, having arrived in this city, from New York, in 1849. He soon became interested in quartz mining in Mariposa county, in which position he continued two years. In 1854, he purchased the Pacific Foundry, in this city, which was started in 1851 by Mr. Hinckley, and has continued at its head from that time up to the period of his death. He has ever been held in the highest esteem by his employees, and, in his death, the mechanics of San Francisco have lost a worthy and valued friend.

Mr. Goddard was not educated as a mechanic, although he possessed a fine mechanical genius, which added to his extensive experience in both the use and manufacture of machinery, rendered his judgment upon such matters exceedingly sound and practical. As a business man, he occupied a high and honorable position, and his efforts in that direction have met with most abundant success. In the private walks of life he was especially beloved, and has ever been regarded by all who knew him as a man of unusual excellence and worth. At the time of his death he was a member of the Congregational Church at Oakland. His remains were followed to the grave by a large concourse of the citizens of Oakland and San Francisco. In the procession were the trustees, faculty and students of the College of California, of which he himself had been a trustee, also the members of the Young Ladies Seminary at Oakland, and the entire body of the employees of the Pacific Iron Works of this city.

MINING SHARE MARKET.

The Mining Share Market has been very much depressed during the past week, although, with the exception of two or three leading shares, stocks have generally improved. Of the twenty-four leading shares which have been active before the Board during the past week, we note ten which have manifested material improvement, seven have fully maintained their last previous quotations, and seven only have encountered a decline. Ophir has improved, while Gould & Curry has materially declined. Baltimore American, North American, Lady Bryan, Bajazette, Nevada (J. G.), Baltic, Daney and Overman are among those that have improved. The total transactions of the week foot up $982,967, a falling off of $538,929 over the amount of last week.

Ophir has been less dealt in, but at rates somewhat improved. We quote sales of 219 shares at from $1,500@1,540—buyer 30 days.

Gould & Curry has been but little dealt in, and at declining rates. It opened at a decline of $130 from previous quotations, and subsequently met with a still further decline, closing at $4,800.

Savage has met with a material decline, dropping suddenly from $3,350 to $3,250, again rallying, but closing in yesterday's Board at $3,075.

North Potosi remains at about last quotations, but with a large decline in amount of business. An order was recently issued by Judge North restraining this company from any further operations on their works near the Savage ground.

Chollar is quiet. We notice but two small transactions at declining rates.

Lady Bryan has been less sought after the past week, but at rates somewhat improved. We hear of outside transactions to a considerable extent. No especial movement may be expected in this stock until after the large amount of rock recently taken out of the mine has been crushed, and its actual value ascertained.

Baltimore American has been largely sought after, generally at improved rates. We quote sales of 794 shares at $40@52, closing weak.

North American is still largely enquired for, and at rates still further improved.

Overman has met with a material improvement, having advanced from $375 to 475. This advance, we presume, is attributable to the reported consolidation of this company with the North American and Sweezy. The particulars of this arrangement have not yet been made public.

Uncle Sam may be quoted at $525; a decline from last week, attributable to the above mentioned combination.

Baltic has advanced from $150, on Saturday last, to $190 on Tuesday, but subsequently declined to $170, at which figure it may now be quoted firm.

Nevada (Justice Ground) has met with a very important advance. It improved from $115, on Saturday, to $125, on Monday, and 175@180, buyer 30, yesterday. This stock is in decided request.

Badjazette has been more in request at improved rates. We quote sales of 104 shares at $31@36—closing at $32.

Burnside has met with increased business but at slightly declining rates—508 shares at $14@18, buyer 30 days.

Sierra Nevada has been offered at declining rates, having dropped gradually from $105 to 90.

Burning Moscow has still further declined. It met with sales on Saturday last at $100@105, from which it has steadily declined to about $80. We quote yesterday's sales—81 shares from $77½@85. This stock which has for so long a time been a prominent feature in the market is now but little enquired after.

Yellow Jacket. We notice but two transactions within the past week, one share at $900, and four, at yesterday's Board, at $875.

Lafayette has improved its amount of business, but at fluctuating rates. We quote sales of 362 shares

at $14@26; closing at the former figure, with a firm market.

Potosi is but little enquired for at $1,300.

Daney had sellers on Saturday last at $80. On Tuesday it suddenly advanced from $110@126, but declined on Wednesday to $110 and 100, and closed before yesterday's Board at $95, with little demand. We have heard no reason assigned for this important fluctuation.

Caledonia Tunnel has met with an increased business at about last weeks quotations. This stock met with a slight improvement early in the week but subsequently declined to previous rates. We quote at $28 firm.

Harmon has still further declined and may now be quoted at $14 @ 15.

We quote Desert at $22½; Meredith at 35; Chas. Cany at 10; Pride of the West at 85; Knickerbocker at 21; Mt. Davidson at 4; Santa Rosa at 5½; Melones at 50; Empire and Golden Age at 33; Mount Hope at 8; Sedgewick at 8; El Dorado at 52; Meredith at 30 @ 35; Seneca at 20; Burgess at 15; Buckeye at 13; Lee, G. H., at 5; Central America at 5; Shelton at 8; Grey Eagle at 20; Golden Swan at 30; Victor Hugo at 15; Armagoza (clear stock) 6; Rhode Island 7; St. George 5; Spanish, No. 2, 30; Am. Pioneer 5½; Christiana 9½; Bullion, G. H., 65.

Real Del Monte still continues the chief excitement of the market. We note a large increase of sales over last week at greatly declining rates. Accounts from the mine are quite contradictory. We refer to extended remarks upon this mine and its management, which will be found elsewhere in our columns, to-day. This stock declined to $70 on Thursday, but rallied again yesterday, and closed at $81 @ 91 b. 30.

We quote Wide West at $30; Utah 23; Willow Springs 2; Silver Hill 12½; Coso 6; Greenville 22; Antelope firm at 230; Mount Bullion 2.

Of Owens River Stocks we quote Metropolitan at $5; East Lynn opened at $4½, and closed at 8.

From Reese District we quote Union at $4½.

From Humboldt we quote Cuba at $4; and Ben Franklin $5.

Reese River—Eclipse 12½; Omnibus at *par*; Belmont, 10½. Amador is rapidly coming into favor, the last quotations being $180 bid $250 asked.

Copper—We quote Baker at $140; Wellington at $1; Napoleon at $65, an advance of $15 over previous qoutations; Josephine $6@7.

The Aquilla and her Cargo.—Work on the Aquilla is progressing as well as could be expected—slow, but sure. The cargo is being drawn, piece by piece, from its watery bed. One man only, can work below, encased in submarine armor. Each piece, as it comes up is thoroughly washed with fresh water from a hydrant, and deposited in a lighter moored along side. The material is being taken, as fast as raised, to a point just south of the foot of Third street, where the polished portion, and brass work are thoroughly cleaned and oiled. The armor plates are here subjected to a second washing, and then to a coat of paint. The cargo, thus far, with the exception of some cabin furniture, for the Comanche, does not appear to be injured, at all, from its submersion in salt water. As yet no portion of the heavy machinery has been raised—nothing heavier than plates of iron weighing from two or three hundred, to perhaps one thousand pounds. The Comanche will be put up near the point where it is being landed, and built in a position parallel with the direction of Third street. There will be no difficulty in launching her from this point, as has been intimated; although a little dredging may be required to allow her to pass into deep water. The convenience or the locality selected for her construction will more than counterbalance the cost of any dredging—if any—that may be required. The locality designed is fast assuming an appearance of bustle and activity, and is daily visited by great numbers of our citizens and strangers visiting the city. The Third street cars will take visitors to within a few rods of the point.

WASHOE STOCK MARKET.

Collated from the Regular Reports of the Virginia Daily Union, to Latest Dates.

Last week was the liviest of the season. Sales in the regular Washoe Stock and Exchange Board, as well as in the Gold Hill Stock Board, and in outside boards, designated as the Pi-Ute, People's Board of Brokers, etc., if summed up entire, would show that never, since last summer, has there been as many transactions in mining stocks, in the same length of time, as during last week. Spring is evidently close at hand and, although the influx of capital over the mountains has not yet commenced, enough has been done to show the confidence that residents have in recent locations, and the expectations of their final richness. It will be observed that most of the transactions are confined to stocks of an inferior value, sales in first class claims of an old standing, such as the Gould & Curry, Ophir, etc., having taken place only in San Francisco.

Virginia District.—For Burning Moscow there has been a good deal of bantering during the week, with but few sales. Honduras attracted some attention. North Potosi was in considerable demand, but a report being prevalent to the end that it had run into the works of the Savage, owners are holding on to await the result. Seneca declined somewhat during the week. St. George, having shown some fine looking rock, has been in request.

Gold Hill District.—The transactions in this district were immense, being confined to American Flat chiefly. There was but little done in outside districts, the attention of dealers at this season of the year being chiefly confined to stocks at home. The Whitman, in Indian Springs District, attracted considerable notice, however, and Lady Bryan is steadily but slowly on the advance, having sold at the close at $65. Reese River stocks are not asked for, though Desert District excites some interest.

Gold Hill District.—Amador, $3 asked. Branch Mint, $12 bid. Baltic, 170 b; 200 asked. Belle Vernon, 10 b; 10 a. Caledonia Tunnel, 22 b; 27.50 a. Crœsus, 45 b; 65 a. Original Crœsus, 15 a. "Is there Silver this side of the Mountains?"

Mr. Editor:—This is a question of much importance to the miners of California, and, indeed, to all Californians, and one which demands more than a passing notice. I call your attention to this matter in order that you may aid in checking the growing injury done to the mining interest of our State, by groundless assertions that no silver exists, in paying quantities, on this side of the Sierra Nevada; that it is useless to look for it, because the general appearance of the country is entirely different from Washoe or Reese River; that if we wish to become interested in silver mining we must "pull up stakes" and remove to "Sage Brush Valley," or some other similar locality in a far off desert. Then stories are told of the richness of the mines near Austin, where there is plenty of wood and water—they might add fever too—and that now is the time to buy stock.

Such is the absurd talk of most parties who return from the other side—Savans, learned in the art of mining and in the knowledge of minerals—and what is the result? Why, the depreciation of mining stock on this side, and the rush of money, capitalists and miners to the other side. When rock such as the Melones, for instance, is found on the other side, and is brought over and exhibited in San Francisco, do you suppose that shares could be bought at the ruling prices of Melones? No, and why? Simply because "distance lends enchantment to the view." Your Calaveras rock is too near home to be of any value.

Another result of this stampede eastward, and I will close, leaving it for some of your able contributors to answer: "Is there silver this side of the mountains?" A few weeks ago I communicated to the "Press" the discovery by some Greek miners, of a quartz vein, near the Melones, containing gold, silver and copper in considerable quantities, and assaying from $302 to $414 per ton, and an assay from an inferior specimen from that vein, made by Mr. Smith, of the South Park Quartz Mill, in your city, produced $84.50 in silver, $12.40 in gold and 5 per cent. copper, to the ton, and this from a well defined vein four feet wide; yet the owners of feet in that claim cannot get three dollars per foot for it; or, I might say, cannot sell it at any price. Thus you see the miner here might as well lay down his pick and shovel, because prospecting wont pay, however successful he may be in finding good rock. He reasons thus with himself: "I have not capital to work it, neither can I sell ground to procure capital; what then, can I do with my lead—valuable as I know it to be? I must either abandon it, and seek for an inferior one on the other side of the mountains, or turn my hand to some other business." Now, Mr. Editor, this is precisely the fix which those Greek miners are in. They have, what would be termed in Reese River, a very rich vein, and have located a claim 3600 feet in length, by 200 in width, with no danger of litigation with adverse claimants. This vein appears to run parallel with the Melones, and like the latter, intersects the Morgan Lead in Carson Hill. R. W. D.

Mokelumne Hill, Jan. 25, 1864.

Our correspondent asks us to urge the claims of our home mines upon the attention of capitalists. We are constantly doing so; and have moreover placed competent traveling correspondents in the field, who are doing much, by their letters, to disburse the public mind of the erroneous impressions which have been formed with regard to the comparative value of our home and distant mines. The letters which we are publishing from Tuolumne and Calaveras counties, contain the most unmistakable evidence of the existence of silver in that vicinity. When the current of public opinion has fairly set in in any direction, it is of little use to attempt to to stop it suddenly. The only way to effect a change is to keep quietly at work presenting facts, until the rush gradually exhausts itself, and attention is more equalized among our different miners.

Our mineral fields spread out over half the width of the continent. There are good mines everywhere within their limits—good silver mines, in both the eastern and western slope of the Sierras. Capitalists will soon find that mines, of equal yield, are most valuable nearest to commercial centres, where supplies are most available, and where labor is consequently cheaper. Increased attention is already being paid to the development of our "home mines." It will ever be our endeavor to faithfully represent *all* the interests of our widely extended mining fields. We aim to make the Mining and Scientific Press the representative of the entire Pacific slope. We know no locality other than the general one already indicated. Our great aim is to impart such information as shall be of interest to our miners at large. Our columns are open and free to all, and correspondents are restricted only to brevity and truth.

A late number of the Calaveras *Times*, in speaking of the Blue Mountain silver mines, in that county, says there are now recorded in that district alone, 114 companies working for silver, many of which are developing mineral, and in some instances of extraordinary richness. Those Co's having developed their veins, have arrived at most encouraging results. A feeling of confidence pervades the holders, sales of shares only being made when necessity demands it. Most of the mines in this district are held by original locators, whose capital as a general thing consists in their bone, muscle and strong will.

The specimens which we noticed two weeks ago, as handed us by Mr. McGowan, from Murphy's Camp, were equal to anything we have ever seen from Reese River. The Butte Bar ledge, Plumas county, on the Middle Fork of the Feather River, discovered about one year since, has turned out rich working tests, and developed what appears to be a valuable ledge, full eight feet thick and traceable for miles. The ore from the Butte Bar lode bears a striking resemblance to that found at Murphy's, and it assays $156 per ton in silver.

Questions Answered.—Our correspondent from Pilot Knob asks us many questions, most of which are difficult to answer, except upon personal inspection of the mine. We don't often answer any questions through the columns of the Press, unless they are of general interest. Some of the questions put by our correspondent are liable to this objection. Talc, fluor spar and iron pyrites are each, and particularly all combined, very good indications of copper. When we speak of a "hanging wall," we refer simply to the *upper wall* of the vein—be it *hard or soft*. Your surface indications were probably a green carbonate of copper. You must find your walls by drifting *across* your vein; if you have a north and south vein, drift east and west. Your pay rock will most probably come in on or near your foot wall. You have not gone deep enough. Go down, at least to water, then drift across your vein, and see what you find. You ought to go down 100 feet before drifting. Go to water at all events. You will probably find copper sulphurets both in your fluor spar and in the iron pyrites or mundic, at the depth indicated. Your spar, which you say you have lost, you will most probably find again by drifting toward your hanging or upper wall.

Mountain Roads.—Strenuous efforts are being made to open a good wagon road through the Yuba Gap, the present season. The Beekwith Pass is also attracting considerable attention. The Big Tree Road Company appears to be in a highly prosperous condition. They expended $58,000 and constructed 25½ miles of new road, besides putting in good condition 17 miles of old road. The route is now completed to within 3½ miles of Silver Mountain, and the company, when they suspended work for the winter, had $5,712 worth of tools, teams, etc., and $25,000 in county bonds. They will commence taking toll, on that portion completed, with the opening of the next summer's travel. This road is greatly needed, as indeed are all the roads now used and in contemplation over the Sierra Nevada.

Quicksilver.—The Virginia City *Bulletin* says 600,000 pounds of quicksilver is consumed in the working process by the mills of Nevada Territory.

The Publication of Mining Notices in the Mining & Scientific Press obtains for them a more general circulation, among parties directly interested, (in this city and throughout the mining districts of the coast, than can be secured through any other medium. State laws require their publication but once a week, and Secretaries and Trustees can make a material saving of costs to stockholders by ordering their advertisements inserted in the journal most properly entitled to receive their patronage—the weekly Mining and Scientific Press.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

Must be seen to be Appreciated!

THE FLORENCE!

A GREAT IMPROVEMENT!

THIS CELEBRATED

NEW SEWING MACHINE

IS ACKNOWLEDGED TO BE

THE BEST IN THE WORLD!

IT MAKES FOUR DISTINCT STITCHES!

IT FEEDS THE WORK EITHER WAY!

WILL SEW OVER THE HEAVIEST SEAMS,

WITHOUT CHANCE OF TENSION!

IT SELDOM, IF EVER, DROPS A STITCH!

IT SEWS WITH SILK OR COTTON THREAD EQUALLY WELL!

IT RUNS LIGHTLY, SEWS RAPIDLY AND IS ALMOST NOISELESS!

IT DOES THE HEAVIEST OR FINEST WORK WITH EQUAL FACILITY!

IT MAKES A STICH ALIKE ON BOTH SIDES OF THE FABRIC, USING ONLY HALF THE QUANTITY OF THREAD NECESSARY FOR THE OLD FASHIONED CHAIN-STICH MACHINES!

WHILE IT POSSESSES ALL THE GOOD QUALITIES OF others, and has many advantages over any and all of them, the FLORENCE is sold at corresponding prices with other first-class Machines. We

WARRANT EVERY MACHINE

To be all that we claim for it, and will give a WRITTEN WARRANTY if required.

AGENTS WANTED in all the principal cities and towns on the Pacific coast.

Send for Circulars and samples of sewing.

DON'T BUY A SEWING MACHINE UNTIL

YOU HAVE

SEEN "THE FLORENCE!"

Legal Tender Notes.

San Francisco, Friday February 12.....65¼ per cent.

Stock Exchange.

The Stock Exchange will be opened on MONDAY, 16th Instant, for the transaction of business.

7v8-tf M. G. ELMORE, Secretary.

STOCK EXCHANGE.

The unparalleled development of the Mineral Resources of the Pacific Slope, and the daily increasing commerce of the city of San Francisco, have rendered a

PUBLIC EXCHANGE,

Conducted on the same fair business principles that characterize similar institutions in Europe and America, an urgent necessity in this city.

The public are therefore informed that a suitable building has been erected, at 612 and 614 Montgomery St., in which will be held Daily Sessions for the sale of Stocks, Bonds, Securities, Specie, etc., under the following Board of Directors, and subject to the following Rules and Regulations:

Board of Directors.

GEORGE W. DART, President.

WALTER SPARROW,	E. H. WILSON,
JOSEPH CLOUGH,	R. O. STURTIVANT,
HENRY WILLIAMS,	D. J. OULLAHAN,
E. PAVALLIER,	EDWARD FLANAGAN,
THOMAS WALLACE,	J. DE STA. MARINA,
M. G. ELMORE,	E. W. LINSLEY.

Rules and Regulations.

1. The business of the Exchange shall be managed by a Board of thirteen Directors, to be elected annually, and to whom application for membership shall be made. Any question or issue raised touching contracts, made at the Board, their validity or meaning, shall be referred to a committee of five, for investigation and final decision.

2. The Sessions of the Board shall be from 12 to 1 P. M., and from 3 to 4 P. M., each day, Sundays excepted.

3. Only members of the Exchange shall offer Stocks, etc., for sale.

4. The public may bid upon and purchase any Stocks, Bonds, Securities, Specie, etc., that may be offered for sale.

5. Buyers of Stock who are not members must either make a deposit of Ten (10) per cent. of the purchase money at the time of sale, or have their contracts endorsed by a member.

6. Should any member or party refuse to fulfill a contract entered into by him at a Session of the Board, he shall thereafter be debarred from all privileges of the Exchange, at least until he shall have specially performed such contract.

Commissions on Sales

Of United States, State, County and City Bonds; Railroad, Steamboat, Telegraph, Gas, and Water Stocks; Certificates, Bills of Exchange, Treasury Notes, Specie, etc., one-half of one per cent.

Commission on Mining Shares:

Sale at $1 up to $10.....	$0 25 per foot
Sale at $10 up to $25.....	50 per foot
Sale at $25 up to $50.....	1 00 per foot
Sale at $50 up to $100.....	1 50 per foot
Sale at $100 up to $200.....	2 50 per foot
Sale at $200 up to $400.....	5 00 per foot
Sale at $400 up to $600.....	6 00 per foot
Sale at $600 up to $800.....	7 50 per foot

From $800 to $3,000 per foot, one per cent. Anything above $3,000 per foot, three-quarters of one per cent. 7v8-tf

508 Montgomery street, Opposite Tucker's and Telegraph Office.

STAGE NOTICE.

NEVADA STAGE COMPANY.

ON AND AFTER SATURDAY, JANUARY 2d, THE STAGES OF this line will run in connection with the Sacramento Valley Railroad from Auburn Station, each even date in the month, until further notice, to Allison's Ranch, Grass Valley, Nevada, Eureka, Steamboat Springs, Virginia City, and all points in Nevada Territory.

Office, corner of Front and K streets, Sacramento, opposite the What Cheer House.

N. B.—This line has been running stages for the last six years, and has never had an accident. Passengers can depend on their safety and comfort, as there are no persons in the employ of this line who are not stagemen. [6v8-1m] J. S. McCUE, Proprietor.

"CHIPPINGS."

The Alahama has burned a large number of vessels in Chinese waters.

There were fifty arrests in Virginia City, in the month of January, for drunks and disorderly.

The Portland *Union* gives an account of six sudden deaths at McMinville, Yamhill county, Oregon, hy congestive chills. One entire family, of the name of Collard, and a Mrs. Bean, were the victims.

The halance in the State treasury on Saturday, February 6th, was $491,469 68.

James F. Kennedy, Repuhlican dominee for Lieutanant Governor in 1859, died recently, at Santa Clara.

"Going ahroad to prospect and spend their money" is the heading the Trinity *Journal* puts to a paragraph announcing the departure of several citizens of Weaverville on a prospectiug expedition to Idaho.

D. A. Hanson & Co. have estahlished a tri-weekly stage line from Colusa to the Ashton copper mines, Colusa county, and run their stages so as to conuect at Bear Valley with Wilber's White Sulphur Springs line, says the Marysville *Appeal*.

A couple announce in the Providence *Post* their marriage, and add to the notice, "No cards, nor any money to get them with."

The celebration of the opening of the Northeru California Railroad will take place at Oroville, on Monday, the 15th inst.

The altitude of Quincy, Plumas county, Cal., is 3,127 feet.

Lassen is the name suggested for the new county proposed to he formed in the Houey Lake region.

County Courts in this State now have original jurisdiction over proceedings in insolvency, and in cases of forcihle entry and unlawful detainer.

For Washoe.—The Nevada *Transcript* says that the travel, at the present time, through that city for Washoe is unusually large. The stages go out crowded every day and most of the passengers hail from San Francisco and the lower country.

Fine Structure.—Wells, Fargo & Co. have manifested a just appreciation of the future importance of Virginia City hy erecting there the finest express huilding owned hy that extensive company in the entire Uniou.

The Price of a seat in the Washoe Stock Exchange is $500. It has recently advauced.

California Slate Pencil.—The Marysville *Express* says: We were handed a portiou of a sea weed which grows on our southern coast, and which answers all the purposes of a slate pencil. It is a small stem, growing to a point, and is most complete for writing purposes on a slate. We do not know whether this peculiar kind of weed is generally known, or its useful properties, but the specimen exhihited to us is the first that has come under our observation.

Before Cutting the Leaves of this journal, stitch each No. through the back, or fasten with a large pin, and you will have a paper in the most convenient form possible for reading or reference.

To Druggists and all Prescribing for Neuralgic and Nervous Cases.—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecunlary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

HEPBURN & PETERSON'S.
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from
Gold and Silver Ores,
Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.
These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machines now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired.
Pamphlets containing weight, strength and price, forwarded free application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS
We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

CROCKER'S
STOCK AND ASSESSMENT LEDGER.
Copyright secured—Price $10.
The necessity of a proper book for keeping the Stock and Assessment accounts of Corporations has long been very much needed. One that would combine economy and simplicity, and would not require the services of an experienced book-keeper to keep the accounts correctly. CROCKER'S STOCK AND ASSESSMENT LEDGER has met this requirement; we have submitted it to several Secretaries of corporations, and they acknowledge that the plan is admirable, and just what has long been wanted. The printed headings are a perfect explanation of the manner of keeping it; and any person, whether they understand book-keeping or not, cannot make an error in the accounts. The Stock and Assessment accounts are so arranged that the Secretary can in a moment tell how any stockholder's account stands, both in regard to Stock and Assessments. He can also, with the greatest ease, trace any certificate, through any number of transfers, to the original one issued. It saves a great amount of labor, as it does not require one-fourth the writing of the ordinary method. It dispenses entirely with the old style of Stock Ledger, Stock Journal and Assessment Book, all three of which Secretaries have heretofore been obliged to keep, condensing the whole in one book. To a person who is Secretary of several companies, this book will prove invaluable, and we feel no hesitation in guaranteeing satisfaction to those who may order them. Specimen sheets sent to those who desire to examine it. The books are ruled with one or two accounts to the page. State which is preferred.
Published and for sale, wholesale and retail, by
H. S. CROCKER, & CO.,
Book and Job Printers, Sacramento.

Certificates and complete sets of books for Corporations, in the finest style, at short notice, and low rates. 4-1m

WHEELER'S
Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.
The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.
Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.
**These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

G. VENARD,

No. 627 Front Street, San Francisco,

SOLE AGENT FOR CALIFORNIA AND THE PACIFIC COAST.

This Compound has undergone the examination of the most competent Chemists in France and England, and has been pronounced all over Europe the best ARTICLE ever found for removing Scales in Steam Boilers, this great evil of industry.

The main qualities of this Compound are: that it removes the scales of any boiler in a few days, no matter how old, and it does not injure the metal in the least. The raising of steam is made easier. It saves fuel and work, and prevents all dangers of explosion.

The Compound has now been in use for three years, and the great success obtained in the Old World induced the undersigned to introduce it in this State, being confident of the patronage of this enlightened and industrious country.

San Francisco, Feb. 5, 1864. [6v8-5t] J. F. HARRIS, Sec'y.

Crockett Copper Mining Company, Copperop-olis, Cal.—Notice is hereby given, that at a meeting of the Trustees of the Crockett Copper Mining Company, held January 2d, 1864, an assessment of one ($1) dollar upon each and every share of the capital Stock of the Company was levied, payable immediately, in gold coin, to the undersigned, or to J. M. Pike, at Copperopolis; being assessment No. 2. On the 1st inst. the Trustees also levied another assessment, being No. 3, of one ($1) dollar per share upon each and every share of the capital stock of the Crockett Copper Mining Co., payable the same as assessment No. 2. Persons having interests in the Company are requested to come forward, prove title, and receive their certificates of stock. ISAAC HECHT, Sec'y,

No. 417 and 419 Sacramento street.

San Francisco, February 5th, 1864. 6v8-5t

Office of the Montezuma Gold and Silver Mining Company, No. 62 Government House, corner of Washington and Sansome streets, San Francisco, Feb. 5th, 1864.—Notice is hereby given, that a sufficient number of shares of the capital stock of the Montezuma Gold and Silver Mining Company, standing in the name of the following person, will be sold at public auction, at the sales-room of Jerome Rice & Co., No. 327 Montgomery street, on WEDNESDAY, March 9th, 1864, at 11 o'clock A. M., to pay an assessment of 12½ cents per share, levied April 27th, 1863, together with expenses of advertising and sale, unless said assessment is previously paid, with accruing charges—viz: Hugh McCormick; 247 shares; amount due, $30.87½. By order of the Board of Trustees.

6v8-5t C. A. CRANE, Secretary.

Triunfo Gold and Silver Mining Company.—At a Meeting of the Trustees of the Triunfo Gold & Silver Mining Co. held January 23d 1864, an assessment of One ($1) dollar per share was levied on each and every share of the assessable stock of the Company, payable immediately to the Secretary, at the Office of the Company, No. 1 Government House, in United States Gold Coin.

5v8-5t HENRY S. BROOKS, Sec'y.

Table Mountain Copper Mining Company, Office 528 Montgomery street, San Francisco, January 16, 1864.—Notice is hereby given to the stockholders of the Table Mountain Copper Mining Company, that an assessment (No. -) of one dollar ($1) per share was this day levied on each and every share of the capital stock of said Company, payable immediately, in U. S. gold coin, to the Secretary, or to J. M. Pike, Superintendent, at Copperopolis. By order of the Board of Trustees.

4v8-1m M. G. ELMORE, Secretary.

Bankers Gold and Silver Mining Company, Gold Hill District, Storey county, N. T.—Notice is hereby given that the Trustees of the Bankers Gold and Silver Mining Company have this day levied an assessment of fifty cents per share on each and every share of the capital stock of said Company, said assessment payable immediately, in gold coin, to the Secretary, at the office of the Company, No. 620 Washington street, or to R. C. O'Neill, Superintendent, at Gold Hill, N. T. W. AUGUSTUS KNAPP, Sec'y.

January 18th, 1864. 4v8-1m

Prima Donna Gold and Silver Mining Company, Devil's Gate District, N. T.—Notice is hereby given, that the Board of Trustees of the Prima Donna Gold and Silver Mining Company, at a meeting of said Board, held January 19th, 1864, levied an assessment (No. 5) of fifty cents on each and every share of the capital stock of said Company; said assessment payable immediately, in gold coin, to the Secretary, at the office of the Company, No. 620 Washington street, Room No. 3.

4v8-1m H. B. CONGDON, Secretary.

Mount Eden Mining Co.—Notice is hereby given, that the Board of Trustees of the Mount Eden Mining Company, at a meeting held January 2d, 1864, levied an assessment of One Dollar on each and every share of the Capital Stock of said Company, said assessment payable immediately in gold coin to the Secretary, at the office of the Company, No. 620 Washington street, Room No. 3. H. B. CONGDON, Secretary.

San Francisco, January 16, 1864. 3-5t

Black Swan Gold and Silver Mining Company, Reese River District, Lander county, N. T.—Notice is hereby given, that the regular annual meeting of the stockholders of the Black Swan Gold and Silver Mining Company will be held on the first day of March next, at 4 o'clock P. M., at the Company's office, No. 305 Montgomery street, San Francisco. By order of the Trustees. J. S. LUTY, Secretary.

San Francisco, Jan. 27, 1864. 5v8-5t

Brown's Bronchial Troches for Coughs and Colds.— A neglected Cough, Cold, an Irritated or Sore Throat if allowed to progress, results in serious Pulmonary Bronchial and Asthmatic Diseases oftentimes incurable. Brown's Bronchial Troches reach *directly* the affected parts, and give almost immediate relief. For Bronchitis, Asthma, Catarrh, and Consumptive Coughs the Troches are useful. Public Speakers and Singers should have the Troches to clear and strengthen the Voice. Military Officers and Soldiers who overtax the voice, and are exposed to sudden changes should use them. Obtain only the *genuine*. "Brown's Bronchial Troches" having proved their efficacy by a test of many years, are highly recommended and prescribed by Physicians and Surgeons in the Army, and have received testimonials from many eminent men. Sold by all Druggists and dealers in Medicine in the United States and most Foreign countries at 25 cts. per box.

Agents for California, Remington & Co., San Francisco. 5-1m

MINING AND SCIENTIFIC PRESS.

List of Contents for January.

No. 1 of Volume VIII—January 2, 1864.—Mastodon Thigh Bone—Illustrated; Mining Review for 1863; Practical Education; Legislative Aid; Taxing the Mines; Gold Mines of New Zealand; Mining and Metallurgical Journals; A Trip to the Mines—Mariposa county; Silver Mountain District; The Lady Bryan Mine; Miscellaneous Items; Knight's Ferry—by our Traveling Correspondent; Hints to Prospectors; Letter from Lower California; Stock Remarks; Summary of Mining News—Gleaned from Various Sources; The Mining Interest; Mining Associations; Keystone Concentrating Works; Report of Stock Sales for the Week—Prices Bid and Asked; List of New Incorporations; Recent Patents; California Inventions; Mining Companies, Assayers', Stock Dealers', Machinists', Foundrymen's, and other advertisements.

No. 2—Jan. 9.—Hunter's Grain Separator—a new Invention, Illustrated; "A little Learning" not "A Dangerous Thing;" Crimea House—Copper Mines, by Our Traveling Correspondent; Reese River Correspondence; Summary of Mining News—California, Washoe, Humboldt, Reese and Owen's River Items; Annual Report of the Gould & Curry Mining Company; Owen's River Letters; Copper Mining in Canada; Short Paragraphs; Industrial Facts; Annual Treasury Shipments; Encourage Home Industry; Beginning of the New Year; Home vs. Distant Mines; California Copper Smelting Works; California Academy of Natural Sciences; Mining Share Market; Our Enlargement; Record of Mining Incorporations; Patent Department; The State Library; About Marvelously Rich Mines; Copper, its Price and Demand; Editorial Items; Stock Reports; etc.

No. 3—Jan. 16.—A Patent Stone-Breaker—with Illustrations; Extraordinary Mental Developments; Reese River Letters—Smoky Valley, Winter, Mines; Sanitary Remarks; Hints to Prospectors; Mining Summary—Placer county, Sierra, Yuba, Reese River, Humboldt, Washoe, Esmeralda, Lower California and Colorado Items; Statistical Articles; New Patents; Lost Arts; Editorial Paragraphs; Mining Share Market; Ophir Co. vs. Burning Moscow; Our Harbor Defences; New Incorporations; Stock Reports; Branch Mint Report; Petroleum as Fuel; Varieties; New Mining Notices and Industrial Advertisements.

No. 4—Jan. 23.—Indian Bar Copper Mines—Illustratlen of the Washington Mine; Correspondence—Chinese Camp and Jamestown; Reese River Letters; Summary of Mining News; Washoe Mining Stocks; A Durable Ink; The Metal Market; Roll of New Incorporations; The Opinions of Our Neighbors; Miscellaneous Information—Mechanical and Industrial Facts; Patent Department; A Mining School for California; The Mechanics' Institute and Fair; From Lower California; Magnificent Specimens; The Beauty of the Season; Silver Bricks; Mining Share Market; A Mining Advertiser, Editorial Paragraphs; Important Success; Mining Laws—a good suggestion; Stock Reports; Total Stock and Mining Transactions for the week; Chippings; New Mining Notices, etc.

No. 5—Jan. 30.—Rock Drilling Machine—with Illustrations; Human Fossils in California; Mechanism—Ancient and Modern; Coal Oil—"A Warranty that is Safe to Bet On;" Correspondence—Sonora, Tuolumne county; A Trip to the Mines—Mariposa county; Letter from Arizona; Mining Gossip—Edited by Frank Warddell; Letter from Humboldt; Importance to the California Miner of a Knowledge of Mineralogy; The Miners' Laboratory, containing a valuable article on Assaying Copper Ores; A Reese River Mansion; The "New Chemical Agent in Warfare; Copper Coating Boiler and other Iron Plates; Navigation of the Colorado; Mining Incorporations; Short Editorials; San Francisco Stock Sales; San Francisco Mining Share Market; Washoe Stock and Exchange Board; Mining Incorporations of 1863; etc.

The Mining and Scientific Press contains 16 pages in each No., and 417 in each volume; two volumes a year. Terms, in advance, 1 year $5; 6 mos. $3; 5 copies, 1 year, $20. For sale by all newsdealers. Liberal commissions allowed all who act as agents.

DEWEY & CO., Publishers.

Cor. Washington and Sansome streets, San Francisco.

Two Good Canvassing Agents can find profitable employment by calling at this office. None but active and competent men need apply.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the Mining and Scientific Press. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

Correspondence from competent writers is respectfully solicited upon all topics of interest to the general readers of the Press. Persons possessing a knowledge of new discoveries, curiosities, important improvements or developments, who have not the time or experience to write their observations elaborately, can send us the substance in a few words, and we will care for the rest. The real name of the author must be received, which will be kept confidential.

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides, and the evidence of any error upon our part will be received in friendship, and treated with respect.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Back Numbers.—We have a limited number of past volumes of the Press on hand, which will be sold, neatly bound, at reasonable rates. A portion of the back numbers of the paper can be had by the single copy.

RENNIE & MORRISON,

STOCK BROKERS,

Mining and Scientific Press.

A Mining Journal--Devoted to News, Art, Science and Progress.

VOLUME VIII. SAN FRANCISCO, SATURDAY, FEBRUARY 20, 1864. NUMBER 8.

[Written for the Mining and Scientific Press.]

HINTS TO PROSPECTORS.

BY J. M. CHURCHILL, A. M.

(CONTINUED FROM PAGE THIRTY-FIVE.)

II. In searching for metals certain points are worthy of observation, as peculiarly affecting them severally. Thus, in placer *Gold* diggings, the ore has been brought to its present position by floating, or driven by a stream. Such places are therefore to be especially examined, where rocks or bars have formed impediments to its progress, and made it settle, as in a cradle. Yet, the water will subsequently have, in some cases, removed the obstruction and left the gold without its land-mark; again, as often occurs in California, in following the gold up-stream there will occur stretches in which no gold will be found, when further up it will come in again. Oxide of *Tin* occurs as stream-tin, in Cornwall, subject to some extent to the same influences. Increase in size will commonly occur up-stream.

The agglomeration of metals at certain points is often marked by changes in the bed rocks, either by the intersection of cross-courses or a change of strata. Thus, *Silver* at Kongsburg increases in yield on reaching schists, these schists themselves containing sulphurets of iron, copper, lead and zinc.

At Joachimsthal the silver ore is rich through basalt overlying lignite.

In Derbyshire, England, lead, zinc and copper occur in veins which traverse limestone and greenstone; these are rich in the former, in the latter they are mostly filled with veinstone. In Cornwall, *Copper* will occupy veins in granite which as they pass into the adjoining killas bear tin, and the reverse in other situations. Copper glance is very uniformly rich in the neighborhood of hœmatites and specular iron. At the junction of volcanic rocks with stratified, and in strata near granite, veins are frequently the most metalliferous.

At Wexford, Ireland, copper is found in Silurian rocks, lead, silver, and gold in small quantities accompanying it. In Renfrewshire native copper is found in trap rocks; at Trenance, in Cornwall, in serpentine; chrome iron constantly appears with this rock.

Lead is common to limestone of the varieties known as mountain lias, and oolite, gneiss, and quartz occasionally contains it, as also dykes of basalt and trap. The streaks on the face of crystals of galena and their coarseness are uncertain signs of silver.

Coal.—The common stratum below coal is fire-clay—above it blackslate. These may contain more or less iron. The clay is impermeable to water and the rainfall in passing through the slates carries down iron which tinges the springs along the margin of the coal—it also gives them a nauseous astringent taste. At the surface, along a coal-bed blacksmut, from breaking up of the coal with the weather, appears. In districts, where what geologists term denudation has taken place, the coal, softer than the surrounding rocks, has been removed by water, leaving terraces or indentations to mark its outline, hence the certain indication afforded by painted nauseous springs, or streams with ochrey slimes, near a black-colored hollow: This hollow, if level, will correspond more or less with the strike, and may be followed from hill to hill.

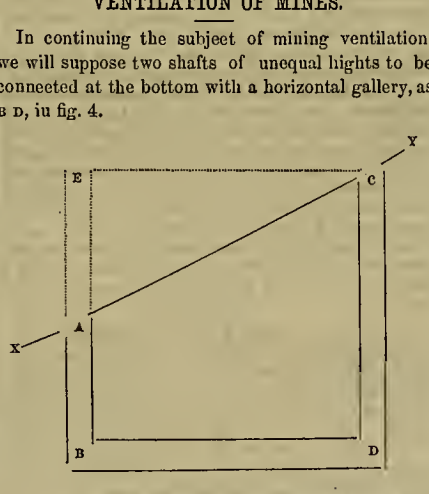
III. Minerals which are of increasing importance in the arts, are ores of nickel, cobalt, antimony, cryolite and aluminous minerals, heavy spar, and witherite or carbonate of barytes. Any large or easily worked deposits of these materials might be immediately available.

IV. The dip and strike being important, the following mode of determining them is simple and exact, if carefully carried out. Let the end of a rope (say five fathoms in length) be held against a wall of the vein, or the surface of a bed of coal, at a point two or more fathoms deep, and the rope be held straight and in contact with the face of the wall, or bed, and then passed over a stick at the level of a man's head at the surface, with the other end hanging to the ground. Let the stick be moved to the right or left (always keeping the two parts of the rope below it straight) till the hanging end covers or hides from view the whole length of the other half above the ground on looking directly towards the vein. The angle between the sloping rope and a level line square with the hanging one is the dip; and if two such sticks be held at the same hight a straight level line from one to the other will give the true strike. This will be different from what appears to be the strike when the outcrop lies on the side of a hill.

[TO BE CONTINUED.]

VENTILATION OF MINES.

In continuing the subject of mining ventilation, we will suppose two shafts of unequal hights to be connected at the bottom with a horizontal gallery, as B D, in fig. 4.



Let us further suppose that the inclined line X Y represents the slope of a hill. We have already shown that while two columns of air exist of equal density and hight, and connected as above, there will be no current or ventilation. But if the two columns of air be of unequal hight, as in the above figure, and differ in density for the surface atmosphere above the line X Y, then there will be a movement of the air in the shafts through the gallery B D, from D to B, and thence to the surface through the orifice A, provided the exterior atmosphere is lighter than that in the shafts. The philosophy of this will readily appear from a little attention. Let us suppose the shaft B A to be continued ideally to E; it will then be of equal hight with D C, and the exterior atmosphere being lighter, of course there will be a difference between the weight of the two columns of air, and the heavier contents of E D will drive the lighter contents of B A to the surface. Ventilation will thus be established, and as long as a difference between the specific gravities of the two columns exists, so long will the motion, once established, continue.

Thus, to obtain a ventilation, as above, it is only necessary to continue the difference in the density of the two columns of atmosphere. If the shafts are located on the side of a hill, and at such a distance apart as to create an important difference in their depth, natural causes alone are generally sufficient to bring about the desired result, as will hereinafter appear.

The density of the atmosphere near the surface varies according to the seasons and daily fluctuations of the thermometer. This variation is perceptible at a considerable distance below the surface; but at a depth of about seventy-five feet, the temperature of the rock and soil remains unchanged throughout the year. Hence it results that the walls of subterranean excavations are generally warmer in winter and colder in summer than the atmospheric air, in addition to which there are accidental causes of variation which occur almost daily and nightly. These differences of temperature between the internal and external atmosphere generally determine the current of air in the following manner:

In winter, the mean density of the air in A B, fig. 4, is greater than that in C D, consequently the movement will be in the direction A B D E, while in summer the reverse will generally be the case, and the movement will be from C to A. In a large mine the air is often compelled, in its course, to ascend and descend galleries and shafts more or less inclined before escaping to the outside. In such cases it will be observed that the air is more or less retarded, which shows that aeriform fluids are more or less influenced by gravity and friction in their passage from one point to another.

Where the two shafts are open to the outer air at unequal elevations, the movement will be constant in winter, because the shaft by which the air descends will be continually filling with air colder, while that through which it ascends will continue full of warm air; but in summer, the air which enters the mine being warmer than that which escapes, the excess of pressure will exist in an inverse way to the movement, which, together with the friction to which it is subjected, will gradually retard the movement, and finally, at times, destroy it altogether. Hence it will be perceived that it is very important, in arranging galleries for ventilation, that the air should be allowed to descend to the lowest part of the mine at the earliest possible moment after its entrance at the mouth, and to ascend again at the nearest possible point to the place of exit. If, on the contrary, the current of fresh air has to *ascend* soon after its entrance, and then *descend* again on its way to escape; it will be retarded, by the amount of friction engendered, and ventilation, to that extent, impaired.

Correspondence.

Calaveras Mines.

BY OUR TRAVELING CORRESPONDENT.

Mr. Editor.—As you descend the dividing ridge on the north side of the Stanislaus, on your way from Columbia to Murphys, you pass through one of the prettiest mountain valleys in the State, which is now as rich in cultivation as in earlier times it was in gold. Though some eight miles long, it is a perfect amphitheatre, as if originally the mouth of a great crater which threw out, centuries ago, the lava of the mighty and wondrous Table Mountain. Of Murphys, the northern extremity of this valley, I have already spoken. The next place on my route, having pretentions to public notice, is

DOUGLASS FLAT.

This is a small village two miles south of Murphys, which at present has some important diggings. They are deep, apparently the bed of an old water course. The first I visited was the claim of Dickinson & Co. Their shaft is 150 feet deep with a stope of pay dirt from five to twenty-five feet thick. It averages one dollar a bucket. This claim is worked by a water-wheel twenty-five feet in diameter, at a cost of eighteen dollars per week. They employ eight hands. Adjoining on the same lead is the

ENGINE COMPANY.

Their shaft is 119 feet deep, with same thickness of pay dirt. At this claim they have a ten horse-power steam engine, and I find the weekly expenses are about the same as a water wheel. They have been at work two years, and still have a large amount of good gravel; also employ six hands day and night. Both these companies subscribed. Next is the

UNION COMPANY.

Their shaft is 175 feet deep, with the same amount of pay dirt, and worked by water power. The weekly amount of gold taken out here averages from $400 to $500, and, at a rough estimate, it is supposed some $75,000 have been realized altogether. The water from these claims is pumped about 90 feet into tunnels which carry it to the ravine; the machinery is complete and effective, and the ground, as far as I could learn, considered good for years to come. I have seen no gold mines, of late, in a better working condition than those at Douglass. About two miles south is

VALLECITO.

This is also quite a pretty little village, but the best portion of it was burnt down last August. The placer mines around have been very rich and extensive. It boasts the largest piece of pure, solid gold found in the State; it weighed 25 pounds 9 oz. avoirdupois. The ground where this piece was found had not paid much before, and the man who turned it over was almost scared to death. When he got out of the shaft he was white as a sheet, and could only faintly articulate "gold, gold, gold." On going below they found this little "chispa." Some one in San Francisco offered $9.000 for it; it afterwards realized only $7,500 in New York. Even yet there are some excellent claims here. During my visit, the Dutch Company cleaned up 60 oz., for a two month's run with four men—as they happened to get water; leaving in the ground sluice, and black sand, it is supposed, at least 40 ozs. more. This claim has been worked nine years, and is still regarded good for two years' work.

The principal operation now going on, however, is that of our good friend Mr. Cohen, which he does not expect to complete before next August. This is a long tunnel through the limestone ledge, from a ravine below the town, to drain a large extent of ground which has never yet been thoroughly worked. It is an immense and costly undertaking, but there is no doubt, that finally it will enrich the company. Besides their own claims, they of course have the privilege of a tail-flume, which itself will be a large thing. There is, I understand, another tunnel running deeper than Mr. Cohen's, intended to drain the upper or northern portion of the flat, which his will not reach; work upon the lower tunnel, for the present, is suspended. I was sorry to hear people speak despondingly of its ultimate completion, for together they would infuse new life throughout the neighborhood.

There is a singular fact connected with this flat. The portion which Mr. Cohen's tunnel drains, runs its water into the Stanislaus; the other, where the channel is deeper, runs its water in an opposite direction, whither no one knows, nor can guess, as all the surface water, runs south to the Stanislaus. It is evident, there is a deeper and hitherto unknown channel, running west, at the upper end and in all probability richer than any yet worked. All this country abounds in natural curiosities, and the one I now speak of is by no means the least remarkable.

Vallecito also boasts some good gold and silver veins, under rapid development. The two principal are Mr. Harband's and Mr. O'Neele's. On the latter, there is a good ten-stamp mill, worked by water-power, with some excellent appliances of Mr. O's own invention, on the principal of Brevoort's and Wheeler's, only giving a different motion to the pulp. The vein is two feet thick and yields fine rock. The claim will soon be in perfect working order. Mr. O'Neele has the reputation of being a first class amalgamator, and I found him well posted. In treating his sulphurets, he uses sal amoniac, with the other usual common acids, sometimes in solution, and sometimes not. In the rock throughout this section there is a vast amount of plumbago, and considerable tellurium. The latter, never assumes an independent form, but is found in combination with both gold and silver, and I understand gives no trouble, except in the final separation of the metals. In Mr. Harband's claim. I had the pleasure of striking the celebrated Darling tin vein, and on the following morning again upon Mr. Bettinger's claim, so that now I have been on it for the space of 12 miles. Let the miners look out about Columbia, Sonora and Calaveritas, and they will find it there as well. From these facts you will see Vallecito has yet a chance of enjoying days almost as bright as those of yore, when her diggings paid by the pound, instead of by the ounce and dollars. Eight miles, southwest, is

CARSON HILL.

Few places have held a more conspicuous name in the history of California than that now under consideration. Perhaps no stream, for its length, was richer than the little creek that swept its western base; certainly no quartz richer than that which came from its very summit. I have not seen it since the time when the sheriff, with his party, and the miners with their party, some sixty strong on both sides, with rifle and revolver, went out to contest, to death, the right of the Morgan title—a title which our law-courts, thirteen years afterwards, have not been able to settle. How changed, how lonely, how silent it has grown. What has become of the mad, reckless crowd of men once swarming upon it—the large pack trains constantly passing up and down its tortuous paths—the man who made $20 a day carrying water from the river to us on the summit—the dashing Señoritas and their lovers—the fandango and its bloody victims—the drinking dens and gamblers—booming of the blasts, above, below, around, in every direction, night and day, as if the people were bombarding the infernal regions—all gone, and the grim old mountain left to its primeval solitude and silence. Well, better thus, a thousand times, than as it was in olden days, the haunt of nightly murder, drunkenness and rioting—a perfect Pandemonium. Yet, notwithstanding this change and this desertion, old Carson is of more importance to the State to-day than ever she was, and it is of this importance I have to speak. A short time since, I understand, there were nearly a dozen quartz companies at work, but at present there are only a couple. The first of these is the far-famed

MELONES.

The present condition of this celebrated mine, not its fluctuations up and down, like the barometer uncertain in bad weather, is what I have to deal with. There has been, perhaps, no period in its history more critical than the last month; but the trouble does not arise so much from the inferiority of the rock as from the difficulty of amalgamation. Impressed with the importance of this subject to the State, I wish to say something upon it. It is well known that a gentleman of reputation was sent up from the Bay, a few weeks since, to institute a new process; that it signally failed, the result being almost perfect "blue mass," instead of amalgam, with which nothing could be done; on this the stock fell below $40. Another gentleman followed, and restored the vitality of the mercury; on this the stock went up to over $60. But it does not appear to me, from the mere fact of restoring the vitality of the mercury, that the latter was more scientific than the former, and did I want to buy or sell Melones stock, I should not be influenced by either result.

Correct amalgamation of rock containing sulphurets is no doubt the great problem of the day. Much, indeed, of the progressive future of California depends upon its solution. At present, the problem has not been solved. So far as Melones is concerned the sulphurets are no worse and no better than at Washoe or any where else; nor have the recent experiments upon it elicited a solitary fact, good or bad, with which we were not perfectly familiar. Let me state the case for the benefit of your readers.

On decomposing the sulphurets there is no doubt now that magnetic iron exists, on which the sulphur released from the gold, in almost native purity, rushes into the mercury and utterly destroys its vitality—of course, then, the gold is lost. By introducing iron filings, and other well know agents, it is quite easy to restore the vitality of the mercury, but then the sulphur re-unites with the gold, and the mercury has no power over it. This is precisely the trouble—in either case we lose the gold. Now what is wanted is the discovery of an agent either, independent, or in combination, which, while it decomposes the sulphurets, will not destroy the mercury; for, without decomposition of the sulphurets, we cannot get the gold, and without preserving the vitality of the mercury we cannot save the gold. So the result of the recent experiments at Melones stand, in my opinion, to-day; thus—one operator by decomposing the sulphurets no doubt lost the gold; the other by preserving the vitality of the mercury did not save it. Where is the difference? So far as the stock is concerned, it is neither one dollar better or worse than it was before the experiments were made. Some doubt whether this great problem will ever be solved. I do not. I believe in the compensative principle of nature. It is impossible to conclude this sulphuret rock was idly created. What a field then our California chemists have to work in! The man who really discovers this secret on which so much depends, will inaugurate a new era in mining, and be a benefactor to the world. I have only to add that on the day I was at Melones, they were getting out splendid rock, both silver and gold. I consider the mine in a healthy condition. A mile and a half west, down in the bed of Carson creek, is the claim of

JONES AND GRIFFITH.

This company have got a very fine vein, and a large quantity of rock on hand ready for their new mill—ten stamps, water power, which will be completed in about a fortnight from the time I was there. It is a distinct vein, and appears to me to carry less sulphurets than any other I have yet seen in this section. The rock is of very excellent character, with handsome sprinklings of free gold. The works throughout are excellent. Mr. Griffith, the superintendent, is a close observer. He is about applying some experimental ideas of his own in amalgamating, which, so far as he explained them, I think will succeed, if not, as he somewhat apprehends, too expensive to pay. I sincerely hope they may, for the company are enthusiastic in mining and have spared no expense in fitting up their mill. I have to acknowledge the hospitalty of Mr. Griffith.

THE CHEROKEE.

This mine is situated about a mile out of Angels and north-west of the Copperopolis road. At this mill—ten stamps, water power—they have recently been crushing some remarkably rich rock, realizing for the last month somewhere about $7,000. The vein, at present, is somewhat broken, but still yields good rock, and looks well. I had the pleasure of breakfasting with Mr. Lombard, the gentlemanly superintendent, and from thorough examination can bear testimony to the ability with which he is working the mine. In the main drift they have cut a handsome copper vein. The Cherokee mine, like others, has had its fluctuations; but it is now in hands capable of developing it and I am greatly mistaken if its future is not one of prosperity and distinction.

Such, Mr. Editor, is another portion of the testimony I have gathered of the mineral wealth of Calaveras. Besides there are numberless veins, undeveloped, but prospecting well, which only wait the touch of capital to earn for themselves a high reputation. For my own part, I feel convinced that in five years hence I shall not be able to recognize the territory I lately traveled over, so greatly will it be changed for the better. Upon the principle that the magnet draws the needle, so will these mines eventually draw capital.

L. H.

The *Union*, in its Review of the market for the week ending Feb 1st says:—Trade is gradually reviving and the sales duing the week have been the largest that have taken place since last season. Although attention has been chiefly directed toward American Flat, transactions in Virginia District claims are again beginning to assume a degree of considerable importance. Outside districts are also gradually attracting notice, some rich discoveries forcing the conviction upon the public that there are other localities rich in minerals beside the districts in the immediate vicinity of Virginia and Gold Hill. A large number of sales have taken place outside of the regular Washoe Stock and Exchange Board in irregular organizations, which have taken to themselves a variety of names.

Humboldt County, N. T.

FROM AN OCCASIONAL CORRESPONDENT.

Friend Ewer.—I have long promised myself the the gratification of communicating to your valuable journal, so herewith receive my first episode. To write of the progress of our mineral ranges and the aspects of this county generally, would occupy quite too much space, for each week develops more and more the illimitable wealth of this section. Muscle capital and money capital is our great want. The Sheba mine is of unbounded extent and, one equal to any found in the Comstock range. As a proof of this we may cite the fact that its managers have been sacking up its richest ores for many months past, and have also several tons of ore of various grades ready for the stampers. Indeed from the very opening of this mine, paying ore has been extracted. Why this valuable property is in its present low state, none but the directors, probably, can explain.

The ranges here contain series of rich lodes: the Mammoth, Franklin, Sophia, Butler, Charter Oak, Almira, Yankee, Cora Ida, Aggis Land, with very many others whose names I have not by me just now; but all are in abeyance for want of laborers and capital; and then good mills to test the ores. The Sheba mill, of Star cañon, either from want of power or mismanagement, is of no account to us, so that we have to haul our ore to Fall's mill, at Buena Vista, distant from East range 20 to 35 miles; from the west side of Humboldt range 35 miles. There is no mill of any kind on that side, though water sufficient for steam purposes can be obtained in all the cañons and abundant water power on the Humboldt range. Thus many leads are undeveloped, and vast wealth remains locked up in Nature's burglar-proof safe. Draw the attention of some of your capitalists to these facts, that we may hope for mill aid before the close of 1864. The Humboldt Tunnel company is undoubtedly testing the hidden wealth of this range. It is intended to cut through from west to east three or four miles, *i. e.*, from Humboldt to Star City. Already a very large ledge has been cut, its width and value, I believe, is not yet tested. We have many fine and valuable lodes in Humboldt district and should be bullion producers if we had properly constructed mills, working at moderate charges, say fifty dollars per ton. Buena Vista possesses many valuable leads, but as your paper of the 9th of January gives items from Fall's Mill I need not say more.—[See also another letter in to-day's issue.—Ed. Press.]

The east range is full of rich veins—the Gem of Sierra, the Natches, the Yosemite, the Empire Tunnelling Company, the Minnesota, with very many others are all paying lodes, but are forced to haul their rock to Falls' Mill, 20 to 30 miles. It is needless to dilate on this great drawback to our prosperity. Water and fuel for steam mills can be had in this range to any extent.

El Dorado district, on the west side of Humboldt range, four miles from the river and 7 miles south of Humboldt City, is another valuable district, lying in abeyance more for the want of a mill than aught else; for most of the ledges are owned by the right sort of men—practical miners. The Zanesville is an example of what may be accomplished by energy and the united action of the owners. Five men only hold this rich lode; they incorporated locally, resolving to raise only $450 a month, or 25 cts. per foot by assessments; went to work vigorously and are now taking out pay rock, and if a mill were at hand would soon be bullion producers. They own a stream which yields sufficient water for a good steam mill, with fuel for years to come, so that a mill could be erected within ear-distance; but the owners probably have not the capital to expend on the work. This lode crops out three feet wide for 300 feet, showing the finest kind of mineral. Other lodes in this cañon want mill power. Echo district, St. Mary's and Indian each have their good ledges; the latter is crushing ore at Fall's mill, from the Moonlight, a very fine lode—the prospects were very fair when I was last at that mill; the yield I have not ascertained.

Casual visitors fancy we have neither wood, water, nor feed for stock—all of which is most erroneous. We possess each article in great abundance, with many fertile spots and cañons, that now supply us with the finest vegetables and garden stuff generally. Our winter season is gliding onward to spring, pleasantly enough, and a few weeks more will find us a busy and stirring people. Now however our population has thinned out by departure for the west, consequently trade is dull and money very scarce. A school is established at Buena Vista and Star, as well as Sunday schools, while a Methodist clergyman visits the different districts on alternate Sundays. Peace and harmony prevail generally, and the health of the county is excellent.

Your paper is of much value to us, while the articles under the head of "The Miners' Laboratory" and "Hints to Prospectors" are of vast importance to all miners. We hope they will be continued. We want information on the tests for cinnabar, silver and gold. Tests for tin and zinc would be of great advantage. [Our correspondent, and others will soon be gratified in these particulars—Ed. Press.]

My next will give you an account of a visit to Pyramid Lake and that beautiful spot, "Surprise Valley." H. O. G. S.

Humboldt, Feb. 8, 1864.

From the Humboldt Mines.

BY OUR REGULAR CORRESPONDENT.

Editor Mining and Scientific Press:—Being a reader of your paper, and noticing that Humboldt is poorly represented in your columns, as well as in most of the San Francisco papers, and being desirous of enlightening the good people of your city in regard to matters generally, I will write down a few lines for your consideration. We have had a very pleasant winter thus far; but little snow, and no very cold weather. Since the winter began, we have done much towards developing the immense mineral resources of the country.

In this district (Buena Vista), quite a number of companies have been constantly at work, and the result of their labors has been very satisfactory. The Jackson Company have been running their tunnel without intermission. They are now in 275 feet. They recently struck quite a stream of water in the tunnel, which is pretty good evidence that they are near the ledge. The ledge is large, and shows good mineral in the croppings and from the shaft, which has been sank on the ledge to a depth of 50 feet. The Manitowoc is at work on their incline. Considerable bullion has been shipped from this mine during the winter, of which I have seen no notice in the San Francisco papers. The rock has yielded over $400 per ton on an average. This is not the result from a few pounds of rock, but from several tons. (Do you think this will pay?) A number of tons has been worked from the Mars ledge, which has yielded handsomely per ton. The Anderson Company has been working night and day, constantly, for the last eight months. Their tunnel is in a little over 350 feet, and they are now taking out the richest silver ore I ever saw, which will be crushed as soon as the road to the mine can be completed. It is supposed that the ore from this ledge will work at an average $1,000 per ton. The quartz is free from base mineral, and is easily worked. The Black Hawk Company have several tons of ore ready for crushing. The Bacua Vista Company are taking out pay rock through their tunnel. The Nevada Company, on the Peru ledge, have their tunnel in 160 feet. The rock is very hard, but they keep hammering away, determined to break into their huge treasure vault, and convert the shapeless mass of mineral into half-dollar pieces. The Venus Company are putting in their best licks, and expect to strike the ledge in a short time. The tunnel is now in over 200 feet. The Cedar Hill Company have recommenced work on their shaft, which is now down 73 feet on the ledge. The Monitor has suspended work during the winter, but will recommence early in the spring.

In Indian District, the Moonlight is working night and day, taking out good mineral and having it crushed. They have already shipped considerable bullion. The ledge continues wide, and gets richer as they go down. The Illinois Company, on the same ledge, have their shaft down 60 feet, and are now drifting for the ledge.

Star District still maintains its reputation of having the best ledge ever discovered—the Sheba. I am not well posted as to what they are doing on other claims at Star, but know they have some very rich ledges, and it is the fault of their owners if they do not realize fortunes from them.

Sierra District has done more in the way of getting out the metallic substance than any other District in the county. Several lots of ore have been worked from the ledge known as the Gem of the Sierra. The last lot of five tons worked over $500 per ton. I think that is pretty hard to beat in any country. Rock has also been worked from the Minnesota ledge, which yielded well. A very rich vein of ore was recently struck in running the Neptune tunnel, which is said to eclipse anything ever before discovered.

I am informed that considerable work is going on in Humboldt District. The work in the big tunnel goes on briskly. Among the other companies at work in Humboldt are the Melrose, Morning Star, St. Charles, Cuba, Calaveras and Winnemucca.

Echo District is coming out bravely. Many companies at work; no idlers in the district. They have some of the best ledges in the Territory, and the boys in Echo know how to work them. The Morning Star tunnel is in 180 feet. The Scottish Chief Company have their shaft down 60 feet. There are several hundred tons of quartz ready for crushing in this District, and a good mill would do a land office business there.

It will be impossible for me to give you an account of all the mining districts in this letter; but I will endeavor to do them justice hereafter. Many of those which I have omitted to mention are entitled to as much credit as any of those named. The future of the Humboldt mines looks bright. Of all the quartz that has been worked, to my knowledge none of it has failed to pay well. The smallest yield at Fall & Price's mill was $175 per ton, and running from that to $500. It is my opinion that no other country in the world can beat us for rich silver ore.

The Humboldt Canal is progressing finely. Ten miles are already completed. This Canal will furnish an immense water power, which will be a fine thing for the Humboldt miners. The County Commissioners have ordered a road laid out from the head of Buena Vista Cañon, across the mountain, to connect with the road from Humboldt City to Carson, a little above the Junction House. This new road, when completed, will shorten the distance to Humboldt river, Virginia or Carson, about 15 miles; besides it will run past several of the best ledges in the district. All who have claims near the proposed road will no doubt contribute liberally to the enterprise, and the road will, most likely, be completed early in the summer. I will write you again when I have anything worth communicating. Quartz.

Unionville, Feb. 8, 1864.

Santa Fe District, Reese River.

We make the following extract from a letter recently received from Austin, N. T:

The reason that so little progress has been made in the development of Smoky and Santa Fe districts is, that when those districts were organized, a proviso in mining laws made a small amount of labor sufficient to hold claims until the first of next May. The consequence has been that as soon as prospectors had performed the required labor, they applied themselves to a search for other ledges, either in the same or other districts. We are very much mistaken if these men would not have found it much more profitable to have *developed* a few ledges rather than to have turned their entire attention to ledge hunting.

Santa Fe district contains between three and four thousand locations. In Reese River district the ledges are mostly situated in granite and do not average more than two feet in width; in Santa Fe, Smoky, Big Creek and some others of the outside districts, they are encased in slate. Perhaps the King ledge should rank first among those of Santa Fe, although it is not as wide as the Otho, Mammoth, or Imperatrice. Some very fine specimens from the King ledge were exhibited at the California State Fair, and it is held firm at $35 per foot. The San Francisco ledge is an extension of the King, and is undoubtedly a good ledge. The Imperatrice is about a half mile north of the Mammoth and is twenty feet in width. It, like the Mammoth, runs north and south and contains 1,200 feet. The Otho ledge is a fine vein. The Belle claim runs east and west. It contains about 1,000 feet, and its cropping's assay from $40 to $50 per ton. It is clearly traceable by croppings for nearly four hundred feet, and native silver is discernable to the naked eye on the outcropping. The Florida ledge is one of the finest in the district. It runs north and south. Near the Florida is the Maryland, a location of 1,200 feet, which also runs north and south; it is six feet wide, and the rock shows splendid sulphurets. It is bound to pay. About one-half mile south of the Maryland is the Santa Maria, an original location. It is about six feet in width, runs north and south, and is encased in slate. In the whole of Smoky valley, of which Santa Fe district forms one-half, there is an abundance of excellent water and much more wood than is to be found at Austin. A sawmill is to be erected immediately, and in the course of three months, two excellent quartz mills.

Quite Correct.—The First Board of Brokers, and also the Pacific Board, have adopted a resolution prohibiting their members from belonging to other Boards.

[Written for the Mining and Scientific Press.]

From Austin, Reese River.

Editor Mining Press:—The weather has been delightful for six weeks—almost a perpetual spring, greatly to the disappointment of all, even to those who claim a residence of three winters. Indeed, I may say, we have had no winter at all, with the exception of a few days, which in this State would be classified among the infantile winters. We have had one fall of snow not to exceed four inches, and this remained on the ground but a few days. We have had no rain to speak of since September, consequently the miners have been greatly favored through the winter in developing their mines, and, as a general thing, they have improved. The health of this section has recently been all we could ask. The hospital, which at the opening of winter was so fearfully beset with applicants, is now almost deserted. Good water, supplied from the tunnels, and other accommodations generally have brought about this change. This section of the great Pacific slope will prove as healthy as California. The mills have been in operation all winter, except when delayed by sediment in their water pipes or by temporary interruptions from frost. The returns from the mills have been highly satisfactory. If they were not crushing paying rock, they would suspend operations. Even though they extract but the price of their labor, it proves the richness of our mines, beyond a doubt. The great discrepancy between careful assays and the mill process, is conclusive evidence to my mind that our workings are defective and that we must resort to some better method whereby a closer approximation to the assay must be reached, or we must submit to work our mines under a great disadvantage. These difficulties will eventually be overcome, but only after much experience. The process of working at Gold Hill will not apply to rock here. However, with all our troubles, we are gaining ground in our shipment of bullion, which you can see by the daily reports.

The Oregon mill, ten stamps, is working from the "North Star" with fine results. The North Star might be pronounced a copper mine were it not more valuable in silver. The mill process finds better success with this rock than with the grey quartz from the "Oregon," wherein the sulphurets predominate, although the latter is pronounced much the richer in silver. The poor results of the mill, in working the Oregon rock, has induced the company to build a roasting furnace, which, when completed, will be employed to obviate the troubles attending the working of the rock. As a large number of our mines are similar in their characteristics to the Oregon, we wait the result of this experiment with much interest. This will be the first roasting furnace in this section and I hardly need add we expect much from it.

I was informed by the agent that the company was about to commence an action against the Manhattan Co., to try titles to the latter ledge. I have not examined into the merits of the question in controversy, but concluded that it will not be much unlike an historical fight in Kilkenny. They will doubtless both be doomed in the contest. It speaks well, however, for the value of both mines. "It is the best fruit the birds are picking at," is an old adage. The Bay papers state that the Mt. Bullion company has commenced a suit against the Amador and General Banks. We know nothing about it here. If it is so, it is not on the docket, certainly, but perhaps they have a summary way on Montgomery street, of acquiring assumed rights, and one unknown to our courts here. Both of these claims are being developed and show up finely. The Gen. Banks is incorporated and has made its first assesment of 30 cts. per share.

The Amador Tunnel Co. and the Wild Wood Tunnel Co. are still pushing the race. How far the first is in I don't know, but the latter has gone into the mountain 220 ft. and has struck a first class ledge. They are now driving for others. The stock is in demand here at $15 per foot, with an upward tendency. While I do not own a foot there, and never did, I may say, at that price, it is the best investment I know of in that district.

From the "Silver Queen" I have seen rock, 18 tons of which, worked at the Fountain mill, yielded $131 per ton. Nineteen pounds of rock taken out of the "Madre de Plata," and worked by mill process, yielded one dollar to the pound.

The attention of miners is now turned to the south of this (the Amador) district, in which direction both of the above named companies are located. From a distance of 130 miles, in that direction, reports come in good. A party recently started out for the Colorado on a prospecting expedition. Trade is rather dull, but many are coming in already, and we expect to see lively times shortly.

Your valuable journal is much sought after; but why is it a week getting here? [It is regularly and promptly mailed—Ed.] I understand that this city and Clifton are incorporated into one; we shall expect to see much improvement under the management of a corporate body composed of the solid men of Austin and Clifton. n.

Austin, Feb. 10, 1864.

[Written for the Mining and Scientific Press.]

More about Reese River.

Great numbers of miners who have been laying off through the last few months are now laboring hard on their claims, and all in fact are preparing for the summer campaign with a will. Lander county, during the coming summer, will prove to the world that she is worthy all that has been said and written in her favor. All the mills that have been completed are now in full blast, and each shows by the bullion turned out that the mines of this section are far better than even the most sanguine expected. In the outside districts many ledges are being developed. The miners begin to tire of excitement, and all appear to think their particular claim is the best; thus all are satisfied and the different companies are preparing for a thorough development of their claims.

Good accounts are coming in daily from the different districts, new towns are springing up, and all are putting the shoulder to the wheel; each one doing all he can for the common good. In the different districts of Smoky valley, the utmost contentment appears to prevail. The miners there, with the most perfect nonchalance, will tell you their mines are of no account; that they don't intend to work them long, but wish to trade them off for anything. Should you request them to set a price, however, you will be astonished at the figures they will name, and if you press them for a trade, you will soon find that they have merely been "talking," and that they will only exchange for a fortune in some other shape. Two hundred feet in one of the claims there was sold last week for the sum of $10,000. Smaller sales are of almost daily occurrance.

I have just seen a map of Clinton, a town in Smoky valley, got up by that accomplished engineer, Mr. Baker. A petition is being circulated for the establishment of a post office there. Several stores will be opened there in the spring, and the place bids fair to become an important distributing point. The town stands in the centre of a large mining district, and will soon have mills at work, sending its quota of "bricks" to your city.

Austin, upper Austin and Clifton are to be incorporated as the town of Austin. Business is improving; teams are even at this early day a common sight, coming in with their huge loads of freight. Everything speaks of lively times the coming summer. I do not think it needs a prophet to foretell that five years from to-day will see a large city where the village of Austin now stands. Unassessable.

The Fur Trade.—The market for furs is growing quite active at the East. Shipments are occasionally made from this port, and large numbers of furs are brought to this market from Oregon for shipment East. Trapping is also carried on to some extent in the mountains of California. We had an interview, a few days since, with Mr. George Beaman, who, in company with an old trapper by the name of Fisher, has recently returned from a trapping jaunt in the mountains in the vicinity of the Henness Pass. They had been out about three months, and brought in quite a quantity of furs, which were disposed of in this city at the following prices: Black fox, from $40@60; silver grey fox, $20@30; a cross between the two, $3@5½; common red fox, $1½; martins, 2½@4; fisher, $2½@8; neuter and common valley fox, from 75c@$1 each.

Neat Work.—We noticed a fine miniature truck, on Thursday, standing upon the sidewalk in front of Montgomery Block. This neat specimen of workmanship was from the shop of Mr. George P. Kimball, on the south side of Market street, near Fourth, where this class of truck is manufactured. It is known as Kimball's patent goose-neck truck.

MINING GOSSIP.

EDITED BY FRANK WARDELL.

[In this department of the Mining and Scientific Press we propose to give various and brief accounts of mining companies, and shall, under all circumstances, write *plainly* respecting their merits and demerits; furthermore, we shall bring to light such transactions as may come within our knowledge regarding the "Bulling and Bearing" system and the "underground" actions of both Trustees and Brokers. We are vain enough to suppose, at all events, that we have the "inside track," and shall, without *hesitancy or fear*, give to the public, from time to time, a peep behind the scenes whenever the occasion justifies. If, in doing so, at any time we have fallen in error as to our report, and it can be so proven, nothing will afford us more pleasure than to make the "*amende honorable*" by correcting the same. We shall feel under obligations to those who are interested in stock if they will communicate to us such items as may come under their observations, and which will prove interesting to our readers. This department is open for free discussion to "one and all." Our object is to render justice to every one. Communications, in all cases, must contain the author's name and address to insure publication, which will be kept *strictly confidential*—otherwise no notice will be taken of them.]

Real Del Monte Meeting.

The meeting called by the stockholders of this company took place at Blumenberg's Hall, in this city, last evening. The meeting was called to order at 8 o'clock, and, on motion, Judge Heydenfelt was chosen President, W. V. Wells, Secretary, and E. Connor, Assistant Secretary. The Judge then arose, and gave his views very plainly regarding the actions of the Trustees in their general management of the company. He remarked that recently a great change had taken place in this stock; it had fallen from $450 per share to $80, and he would like to know the cause of the same. He, like the majority of the stockholders, could not state the reason, and found it an utter impossibility to gain any insight whatever into the affairs of the company. All he knew was what Rumor said, and what newspapers had reported. Go on one side of Montgomery street, and the talk was that the mine had given out; then go on the other side of the street, and the report was that it was the best mine in the country; and the affairs of the company were never in a more flourishing condition; and yet the Trustees would not deign to give the least particle of a report, either of a good or bad nature, to satisfy the public enquiry. He further remarked that "foxes had holes, and the birds of the air had nests; but the stockholders of the Real del Monte had no place to rest their weary heads." Now was the time to take action in the matter, and to exact their privileges as stockholders. He concluded his remarks by saying that he would now retire, leaving it for the stockholders to decide what steps should be taken.

Mr. Robbins then addressed the President, stating that he would like to offer, for the consideration of those present, the following resolutions, which were read, and adopted unanimously:

Resolved, That a committee of three be appointed to examine the books and affairs of the Real del Monte Mining Company, extending back for twelve months past, and to report to a meeting of the stockholders, to be called at some day to be fixed by the chairman, to the following propositions:

1—The amount of bullion produced by and received from the mine.

2—The amount and objects of the expenditures for the same time.

3—The amount of the debt of the corporation and for what, and under what circumstances it was created, and to whom it is owing.

4—The character and history of the settlement made with the Pond Company and with other Companies.

Resolved, That said Committee be entrusted with power:

1—To employ an agent to ascertain the exact condition of the mine and mills belonging to the Company, and report upon the same.

2—To employ counsel to bring any necessary suit against parties who have dealt unfairly with the Corporation and the stockholders, or to set aside any illegal contracts which have been made by the Trustees, or to enjoin any assessment upon the stock of the Company which may be levied by them, with full power to move for and agree to the appointment of a Receiver to take charge of and manage the affairs of the Corporation, or for the removal of the present Trustees, and, if necessary, for the dissolution of the Corporation.

3—To call on all the stockholders for contributions, in proportion to the amount of stock held by each, for the purpose of carrying out the powers granted herein to the said committee.

After the reading of the resolutions the number of shares was then read and there was found to be, according to Mr. Morrison's account 2,435 shares represented—hearty applause followed the announcement. Mr. Fisher came forward and remarked that he would like to hear from any member of the new or old Board of Trustees, if present. Whereupon the cry went forth for Mr. Lent, who responded by saying that he was one of the new Trustees, and had not as yet got thoroughly into the affairs of the company; all he knew was what came through second parties. Mr. Brewster was now up there to ascertain full particulars about matters and things and until he arrived he could not say anything definite. He thought the mine was not so very good as represented, (in the first part of his speech.) [En.] but, in the latter portion of his remarks we noticed a de-

cided and more favorable change, especially when he introduced the subject of its paying a dividend before long, then, we noticed the faces of the audience begin to illume with delight. He also stated that to his knowledge some one hundred and fifty thousand dollars had been received from the mine within the past two months; this however, was not stated until the audience made the request. The meeting then adjourned to meet at the discretion of the President, when the report of the Committee, composed of Messrs. Warfield, Robbins and Buckley, would be read and acted upon.

Give Them a Call.—Parties who are not much "posted" regarding the *modus operandi* of the "hulling and bearing" system, as practiced by some of our leading and highly respectable brokers—excuse us, gentlemen, if we speak too plainly of your actions—can gain a little insight into the same by calling at the Bank Exchange any evening between the hours of 8 and 10 o'clock (Sundays not excepted), when they will be almost sure to find more or less brokers purchasing and selling stocks, giving their views respecting the merits and demerits of the different mines, and boldly playing the "bluff" game among themselves. It is really quite laughable to an outsider to witness the dignified attitudes that some of these worthies strike when they commence the "button-hole" mode, and whisper to you something confidential why this or that mine should go down or up, when probably, if the truth were known, they know nothing about it.

Selling Short.—It is reported that a broker firm in this city lost, in two days' transactions, by "selling short" in Real del Monte stock, over thirty thousand dollars. We should think, after such cases of experience as the above, that it would act as a warning to reckless operators, and, eventually, do away with this, the worst species of stock gambling.

Pennsylvania Tunnel.—They are working night and day upon this tunnel, and, according to last accounts received, are now in 716 feet. Their prospects are encouraging. We wish for them success, as they are a hard-working and deserving body of men who compose the company.

Santa Rosa G. and S. M. Co.—Mr. Cummings Cherry, long and favorably known as a thorough and practical miner, has received the appointment of Superintendent of this mine. Under his careful and skillful management, we *now* may expect to witness some favorable results. The reports already received here are encouraging, and we notice more activity in this stock in the market. As soon as Mr. Cherry gets affairs under headway we will give a more extended notice respecting the merits of this company.

Bullion G. and S. M. Co., Van Horn District has proved a total failure. They gave a final test by sending a few tons of rock to be crushed, which did not pay over one-half the expense of hauling. We always considered that district too risky for investments, without the parties purchasing desired to make them *permanent* investments; which, if such is the case, we guess that most of their wishes have been realized.

Falls of Clyde.—This lode crops out very large, and has the appearance of good prospects being taken from the croppings. The company are running a tunnel that will strike their vein about three hundred feet deep. The tunnel is good property, we think, independent of their own ledge, and will, without a doubt, strike the old Winnemucca, one of the oldest locations and main ledges in the District. The stock is at a very low figure in the market, much lower than it should be, considering the prospects of this company.

Real del Monte Contracts.—We learn that a mutual arrangement has been entered into by the members of the First Stock and Exchange Board, respecting the late "high figure" Real del Monte contracts. That is right, gentlemen; nothing like brotherly love among brokers.

A Free Fight among the Brokers.—The Pacific Board of Brokers passed a resolution a few days since expelling any member of the board who joined any other board. The rule was attempted to be enforced yesterday on a certain member, when a free fight ensued, in which one or two gentlemen became more or less damaged about the physiognomy. Keep cool, gentlemen!—Daily Democratic *Press*, Feb. 19.

We beg leave to differ with the writer of the above and, for his and the public's information, state that *no such occurence* took place in the Pacific Board. Furthermore we would give the reporter to understand that the board in question is composed of gentlemen and not shoulder strikers. Reporters should be more careful in giving their reports out to the public, before having them antheaticated.

Acceptable News.—We have been shown a private despatch from Mr. R. E. Brewster, President of the Real Del Monte Co., dated Feb. 19th, 10.40 A. M., stating "that he had fixed all matters satisfactory and that another shipment of $28,000 was on the way." We further learn that the above sum was taken out in only one week's run—and, not working their mills at night either. This makes nearly $86,000 received from their mine so far this month. If they continue at the same rate they will take out over $172,000.

Daney G. and S. M. Co.—This stock has "gone up" considerably in the market, caused by a report that they had struck very rich rock again. How much truth there is in the report, we know not.

Lady Bryan G. and S. M. Co.—During the first part of the week this stock was eagerly sought after and was in fact the favorite speculative feature, next to Real Del Monte, in the Boards. Towards the middle of the week it "weakened" considerably. A lack of confidence was manifested by purchasers At the close of the week, say Thursday, it "rallied" in the afternoon session of the Board—rather mysteriously, to almost its former prices; since then it has lowered" and on Friday closed dull, in all the Boards except the Pacific Board. We hear that the reports are not very satisfactory from the crushing of their ore.

Humboldt.—We give, to-day, very full correspondence from Humboldt and Reese River, from which it appears that the winter in those regions has been exceedingly favorable for mining. Prospecting operations are still carried on to a large extent; but there appears to be a growing conviction of the importance of more fully developing the mines in order to more readily induce capitalists to take hold of them. The canal enterprise of Humboldt, according to the Humboldt *Register* is sure of reaching its ultimate completion. It will afford water enough to run from 40 to 60 mills, and all the quartz can be boated down the canal from near the miners. The *Register* says Vance and Swim, at Fall's mill, do better work than one of ten amalgamators about Virginia—working ores to within five to twelve per cent. of value shown by fire assay. No rock crushed during the past two months, except a lot from the new Desert District, has worked less than $175 per ton; and from that it has gone up to $500. Vance has a new process—a discovery of his own—by which he works many of the ores found here, getting a higher yield than by any of the regular processes. In this he uses no chemicals, no materials whatever except those indigenous to Humboldt.

Virginia City.—Reports from Virginia City and vicinity are highly encouraging. An immense amount of work is being done at the present time. The late developments in the Flowery and American Flat districts appear to have inspired an increased degree of confidence in outside mines. By reference to our Washoe Stock Report, it will be seen that an unusual degree of activity prevails in the stocks of incorporated companies, which generally rule at better rates than those in this city. Reports from the New Desert district still continue favorable. It seems to be settled that an abundance of water for domestic purposes, at least, can be obtained convenient to the mines, and of a very fair quality.

From our home mines we have not as many particulars of interest, during the first of the week, as usual. A letter from our traveling correspondent will be noticed in the present issue, briefly noticing some very interesting experiments in the vicinity of the famous Carson Hill mines, and other matters of general mining interest in that region. The Calaveras *Chronicle* says the new mill on the Heckendorn silver lode, at Blue Mountain was to have commenced crushing on Monday last. The company are very sanguine that their lead will prove a complete success.

Siskiyou.—The Marysville *Appeal* of the 14th says: "We were shown from the Union Co's claim near Alleghany, one of the richest quartz specimens we ever saw in the State. It was difficult to decide which predominated, the quartz or the gold. This Company have made three 'clean-ups' since it commenced crushing, which yielded as follows: 1st, $43,000, 2d, $900, 3d, 36,455.93. The last sum was the product of 16 days' run, with an 8-stamp mill. The specimen we saw was from that part of the ledge which is denominated as a 'pocket.' This 'pocket' is about two feet wide across the lode, and is marvelously rich. 1,200 lbs. from it, in the late run is supposed to have yielded $10,000. The $36,455.93 was the product of about 100 tons of rock taken from the ledge without sorting. The Mountain *Messenger* of last week continues to speak very favorably of the mines at Howland Flat and vicinity.

The Portland *Daily Times* learns that they have struck silver bearing quartz in the vicinity of John Day's River, which is equal to the Gould & Curry. On the Malheur, rock has been found containing large quantities of gold and silver. Miners are making from an ounce to $20 per day. One company of ten men took out $1,200 during a single day. Everything indicates that region to be superior to any other on the Pacific coast.

The Red Bluff *Independent* learns, from a gentleman just down from the Boise Basin, that the miners expect to be able to work their claims in a very short time. They are already engaged in "stripping" them preparatory to working them. The weather is fine—no snow in the valley, and very little in the basin. Stock in the valley is looking finely, without any feed but that which nature furnishes. A large number of miners left this city for the Northern Mines, on the last upward bound steamer.

Siskiyou.—The Red Bluff *Independent* speaks very encouragingly of some new quartz diggings recently opened in that vicinity; assays are reported from $137@$410 to the ton. The same paper also says that arrangements are in progress for putting up a mill in the Pittsburg district. The mill belongs to parties in this city who had intended it for the Humboldt region, but will probably change its destination to Siskiyou county. The Minnesota claim has a shaft down 36 feet and a tunnel in 150 feet. The rock is very hard silver ore, free from base metals, and only awaits the erection of a mill to give returns. The *Courier* says that the Williams & Skillinger (copper) are taking out ore for shipment, at the rate of two tons per day, on which they get an advance of $71 per ton. Twelve Companies are now incorporated in the Pittsburg district, and five more will soon be added to the number.

Copper Discovery.—The late copper discoveries on the Russian river still continue promising. The original locators, on the Calvary claim, according to the Petaluma Journal, are taking out rich ore which is found in deposits, increasing in quantity as they enter the mountain. They have already a large quantity of ore, much of which will yield as high as forty to fifty per cent. in copper. The ore resembles that taken from the Mountaineer or Richmond lode on the Colorado river, being of a grayish color.

The copper discoveries near San Luis Obispo are creating considerable excitement in that neighborhood. The Pajon *Times* notices quite a number of companies which have already gone to work, or are about commencing operations there. The discovery of coal in the same locality has been announced and a company has been formed to develop the same under the title of the "San Semione Coal Mining Company."

To Correspondents.—We are compelled, for want of room, to take considerable liberty with our correspondence; in many instances by cutting it down, and in others by so condensing as to give essential particulars only.

Mechanical Department.

THE AMERICAN MECHANIC.

There never was a time when the mechanic was more fully appreciated throughout the world than he is at the present moment. In our own country this is most especially true. The American mechanic has already thrice revolutioned the world by his inventive genius:—First with the steamboat, second with the telegraph and lastly with the iron clad monitor Our war, so full of present disaster and so big with glorious prospects for the future, has been a most fruitful field for the display of our mechanical skill. and engineering genius. The efforts of our mechanics in this direction have presented us in an entirely new phrase to the European world. Notwithstanding the mendacity of the London *Times* and the equally mendacious *Blackwood*, both of which periodicals have used every endeavor to rob American Mechanics of their well earned reputation, by claiming the steamboat, the telegraph and finally the monitor as each and all English inventions, the mass of the English people, and indeed the people of all Europe, are now looking on with wonder and astonishment at our present display of mechanical power and genius.

Our country is a young giant; its growth in material power is a modern miracle among nations. It presents more openings for young men, not over blessed with competence or influence than any other nation on the globe. Our greatness has its chief foundation on the superior intelligence of our people. With Americans, emphatically, "bayonets think," and "knowledge is power." It is this which gives our armies their power and endows them with that wonderus recuperative energy which has no parallel in European history. It is this superiority which prevents our great victories on either side from becoming decisive disasters. It is this which enables two such armies as have confronted each other for the last three years on the Potomac to still maintain a firm and defiant attitude, in spite of the most desperate efforts of each to destroy the other.

The American mechanic, who acquires a master skill in his business, coupled with intelligence and scientific knowlege, is sure to rise to wealth and distinction. The reverse is the case where there is a lack of intelligence. The public mind in America is always active and progressive. The American mechanic, in order to be up to the times, makes especial effort to keep himself posted. It is always his ambition to advance. Every apprentice, who is wise, looks forward to the time when he hopes to become a master workman, and omits no opportunity to inform himself especially in everything that pertains to his calling. A mechanic should also be posted with regard to progress in general science. He should be ambitious to become intelligent in every matter of industrial interest. No better means to acquire such information is presented than in the periodical publications of the day devoted to the diffusion of practical information. There are many publications, indeed a majority of our weekly and monthly publications are of a class that contains matter which not only imparts an unhealthy excitement to the mind, but oftentimes gives a wrong, and not unfrequently a disastrous bias to the mind of the young reader. There is another class which is devoted mainly to science and practical information, which appeals only to the intellect and judgment, and the influence of which is always elevating and useful to every class of readers. Our mechanics and young men will profit much if they bear these facts in mind and make a wise selection in their reading matter—both of books and periodicals.

New Steamer.—The California Steam Navigation Company intend building a new steamer, to be placed on the San Francisco and Sacramento route. The boat will be larger than the Chrysopolis, and cost about $250,000.

Death of an Eminent Inventor.—Mr. Samuel Hall, of Nottingham, England. and one of the most distinguished of English inventors, has recently deceased, at the advanced age of eighty-two. Mr. Hall has rarely been excelled in inventive genius of a useful character. His inventions were chiefly the results of scientific investigations, and have been acknowledged of vast importance to British manufactures. The greatest triumph of his genius was the "gassing" of lace and the bleaching of starch—processes absolutely essential to the perfection of fine cotton fabrics. The gassing process consists in the passing of a flame of gas through the insterices of the lace, and by which the sheet of lace which entered the flame opaque and covered with loose fiber, issued from it bright and clear, and equal in appearance to the fine thread lace made from linen, on the continent. This invention elicited much interest at the time of its introduction. Mr. Hall also claims numerous engineering patents, by one of which steam was condensed and returned to the boiler by passing it through pipes immersed in cold water. By this means incrustation from the use of sea-water was avoided, and a great saving of fuel and cost of repairs effected. The combustion of smoke was also among his inventions. He thus labored for the benefit of mankind with devoted constancy to the end of his protracted life. A writer in noticing his death pays him the following eloquent tribute: "He had in a large measure the genius of the mechanician, and belonged by nature to that illustrious line [Mechanics] which has in all ages bequeathed the heritage of power, and to which the world looks for her most special triumphs."

Useful Invention.—An invention has recently been made in London by which common plaster of Paris casts may be hardened to the consistency of firm marble. The process consists in submitting the articles to a bath in a mineral solution, to be continued for several days. The sulphate of iron in solution, or the cyanide of potassium, alumina and lime-water will answer for the hardening bath. The articles after being immersed for some days must be taken out and dried. Soft gypseous limestone, which may be easily formed into artistic shapes, may be then hardened so as to withstand the most severe exposure to the weather. This invention might be most advantageously employed by marble workers, for ordinary tombstone ornaments, etc., which might thus be readily formed, at small cost, and with more artistic effect than the uncouth efforts in that direction which too often disfigure, rather then ornament the resting places of the dead. A patent has been taken out for this invention in England, but none, we believe, in this country.

The Value of Patent Rights in many departments of industry is beginning to be sensibly felt in the Eastern States, where so many persons have been suddenly called from the ordinary fields of industry to fight the battles of their country. The field for profitable invention was never so ample as now, and the want will be felt for several years to come. We must now make especial efforts to accomplish by mechanical means as much as possible of what has heretofore been done by the slower process of hand labor. Let mechanics, and especially inventors, bear these hints in mind, and make special efforts, at this time, to benefit the world and in so doing to enrich themselves.

Machinery of the Human Form.—Very few mechanics are aware how much machinery there is existing, and in constant action, in their own bodies. Says a popular writer, not only are there hinges and joints in the bones, but there are also valves in the veins, a force pump in the heart, and curiosities in other parts of the body equally striking. One of the muscles of the eye forms an actual pulley. The bones which support the body are made precisely in that form which has been calculated by mathematicians to be the strongest for pillars and supporting columns—that of hollow cylinders.

Further Particulars of Government Experiments in Using Hydro-Carbon Oils for Generating Steam.

A few weeks since we made a brief notice of the Reports of the Commissioner appointed by the Naval Bureau for investigating by actual experiment into the economy and practicability of using the hydro-carbon oils (common crude coal oils) for the generation of steam. Since that time we have met with some further particulars, although the full report has not yet come to hand. [If it should be in the possession of any party in this city, we would be extremely obliged for a loan of it for a few days.] It appears that the method employed, as per the direction of the Department, was the process invented by Messrs. Shaw & Linton, of Philadelphia. The Commission made a series of careful experiments extending over a period of five months, which were highly satisfactory. The following extracts from their report are all which we have yet met with:—

"The volume of flame was so great as to pass entirely through the tubes of the boiler, and heat the smoke-pipe red-hot for several feet from the base. in consequence of which the maximum amount of combustion and evaporation was not reached, in the use of petroleum.'

The evaporation in favor of petroleum was 103 per cent., as shown by the report; the same boiler being used with the best anthracite coal, and under precisely the same condition.

"The time of generating steam from water of equal temperature to 20 pounds pressure above the atmosphere was, for the oil, an average of 23 minutes; and for coal 60 minutes; or in favor of the oil 114.3 per cent."

"The time from full operation for the complete extinguishment of the fire in the use of the oils, was about sixteen seconds. One of our iron-clads or naval steamers, by its successful use as suggested in the experiments so far as tried, would be enabled to keep the sea under steam three times as long, with less labor and greater convenience as compared with the use of coal, equal weights of each on board being considered."

The advantages above enumerated are highly important, and if fully sustained by subsequent trials cannot fail to effect a complete revolution in the mode of generating steam, especially upon sea going vessels, where economy of stowage of fuel is of the utmost importance. Sufficient confidence already appears to be felt in the economy and practicability of this method of generating steam for commercial purposes, to induce the formation of a company in New York for the purpose of applying it to an ocean steamship. Government, acting upon the suggestion of its Commission, will undoubtedly apply it to one or more of our first class ocean steamships of war, where, if anywhere, it must prove most especially serviceable; so that we are in a fair way to learn, at an early day, what there is in this apparently important discovery. We gave, in the recent issue already alluded to, what appears to be reliable data with regard to the advantages which oil possesses over coal, in point of economy even. California would be most especially benefited by this discovery, should it prove what it now appears to be. There is little doubt but that explorations, now in progress, will soon develop an extent of hydro-carbons on this coast unequalled, either in accessibility or extent, by any other region on the globe.

The Largest Chains in the World.—The largest chain cable ever manufactured was used for raising the Russian ships sunk at Sebastopol. It was 200 yards long, each link weighing 300 pounds, and each link was tested with a strain of 500 tons. It was manufactured at the Reading Forge, Pa. The great chain stretched, in the Revolution, across the Hudson river, at West Point, to prevent British vessels from ascending the river above that point, was only half as heavy and strong as the one at Sebastopol. The largest chain cable ever manufactured for a merchant vessel, was the one for use on board the U. S. mail steamship Adriatic. This cable was forty yards long, each link weighing fifty pounds—a mere watch-guard chain compared with that employed at Schastopol.

Patent Department.

No patents were issued from the Patent Office to California inventors during the week ending Dec. 22, 1863—the latest dates of the officially published list which has been received at this office. We subjoin our weekly record of late and important inventions :—

Gunpowder.—A patent for a new gunpowder, intended for artillery,has been taken out by W. Spence, London. The patentee puts into a vessel thirty-eight parts in weight of water, and two parts in weight of finely pulverized charcoal, which are to be thoroughly boiled together; he then adds twenty parts in weight of chlorate of potash, and six parts in weight of a mixture of two parts finely pulverized charcoal and three parts of the nitrate of lead, or saltpeter, the whole thoroughly mixed. After this there is added seven parts by weight of fine sawdust, and the whole is then boiled until all the ingredients are incorporated. The mixture is then dried in open pans heated with steam, and it is granulated in the same manner as common gunpowder.

Riveting Iron Ships.—At a late meeting of the Liverpool Polytechnic Society, Macfarlane Gray explained a steam riveting machine for employment upon ships' sides, bridges, &c., which he has patented. The machine is suspended by a lanyard over a ship's side, and can be moved from point to point as may be required. The apparatus by which the rivets are driven is worked by steam, and so rapidly is the operation performed that at a trial three rivets were fixed in 25 seconds. There are two or three variations of the same machines for different purposes, and a chisel can be attached by which the heads of the rivets are pared off with as much ease as though they were of wood.

Invention to Prevent Railway Accidents.—One of the Philadelphia city railway companies has placed an apparatus on their cars, which, it is expected, will prevent many accidents. It consists of a fender placed in front of the wheels, and brought down close to the rails. A strong spring allows the machine to pass over a permanent obstruction, but any movable thing is at once pushed off or along the rail in front of the car. Experiments have demonstrated that a foot or hand placed on the rail is at once pushed aside, without stopping the car and without injury to person. This machine will also remove snow and other obstructions which may impede travel or throw cars from the track.

India-rubber Shirt Collars.—Linen, cotton, paper and steel collars are now made, and to these, vulcanized India-rubber collars have been added by W. J. Smith, of Sale, England, who has taken out a patent for them as a new article of manufacture. He states that suitable patterns may be painted or printed on the collars, either before or after they are cut from the sheet, and they may be made white, or colored, or embossed. Cuffs and wristbands may be also made of the same material.

Improved Armor Cladding.—C. W. S. Heaton, of Illinois, has invented a new system of armor cladding for war vessels, which, by experiment, has given great satisfaction. The system consists in overlaying armor with wood or other yielding facing. The inventor's theory is that the exterior yielding coating offers a gradual resistance to the blow of the shot, and that the penetrative force of the same is thereby greatly lessened, by being distributed over a larger surface of iron. Tests were made at the Washington navy yard, not long since, which resulted very favorably to the system. By this invention vessels can be clad so as to dispense with a great deal of plating now carried, by reducing the thickness of iron and using in its stead the layer of wood outside of the heavy iron armor. The Quintard iron battery Onondaga is plated in this manner, and it will not be long before she will have an opportunity to test under fire this style of plating.

A sawmill on a new plan has just been put in operation at Cheshire, Mich., by J. G. Lindsay, the inventor. The saw works horizontally, cutting the lumber from the top of the log, and after passing through the log it is turned over, the carriage is started the other way, and the saw works back again, cutting the log as before.

The Mining and Scientific Press Patent Agency,

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government,embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enabled to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3½ years and six months	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every caveat	10
On every application for a patent	15
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulched in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed. We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Mining and Scientific Press.

W. B. EWER,.....SENIOR EDITOR.

One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers.☜

Terms in Advance.—Having adopted the cash system, ALL payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

AMERICAN AND FOREIGN PATENTS.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

FAVORABLE TO INVENTORS.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

San Francisco:
Saturday Morning, February 20, 1864.

A MINING SCHOOL WITHIN OUR REACH.

The establishment of a school for the purpose of teaching the sciences hearing upon mining and agriculture is attracting considerable attention at the present time. It is a step which, if well directed at the outset, cannot fail to produce important and beneficial results; while, if otherwise initiated it can result only in failure, or at best, but imperfect success. The present straightened condition of our finances forbids the expectation of anything like an adequate especial appropriation for such an institution as has been proposed, for some years to come; yet the wants of our mining community demand that at least some preliminary steps should be taken in the matter by the present Legislature. At least two years must elapse before any active measures can be be inaugurated towards the establishment of a school upon the plan proposed in the Commissioners' Report, now before the Legislature. In the mean time we see no reason why the Legislature now in session may not make some arrangements by which suitable rooms can be prepared for the temporary reception of the State Geological Cabinet, and for a small class-room, or rooms, provided with a few of the most essential apparatus and and other requisites for the instruction of what may, perhaps, be a preparatory class for the more advanced school in contemplation. The cost of carrying out such a project would he but trifling, and might well be left, under a limited appropriation, in the hands of the Commission proposed in the Report now before the Legislature.

It is a matter of utmost importance that an elementary mining school should be established at once, in this city, where a good practical miner may in a few months acquire a fair amount of general knowledge, bearing upon his business, in addition to his already acquired skill and by which he may be enabled to form a tolerably correct judgment with regard to the principal minerals, and accomplish the simpler processes of assaying usually required in the ordinary course of prospecting. Hundreds of miners visit this city every season, and spend quite time enough here, and have sufficient leisure, to acquire an amount of information in that direction which would be of great benefit to them on their return to the mountains. The need of such a school is daily impressed upon us, by the scores of miners who are constantly calling at this office, during their occasional visits to the city, desiring books, papers, and other means of information which may he useful to them in their mining operations.

Of course such a scheme as the one here suggested differs entirely from the proposed institution of a college of mines, or "polytechnic school" of high grade, where geology, chemistry, mechanics, physics, botany, natural history, mineralogy, metallurgy, mining, agriculture, surveying, etc., etc., should be taught by a competent corps of professors and lecturers. But the project here proposed, need in no way conflict with the carrying out of the proposed higher grade of school. It may either be made the basis of that institution, or a preparatory school for it; or it may, at the proper time, be discontinued, and the material which may have accumulated, transfered to its more pretentious successor.

In most European mining districts elementary schools of this description have been established, generally having no connection whatever with the higher grade of mining schools. They are usually located convenient to the mines, and are resorted to chiefly by working miners, or employed for educating a class of men to become trustworthy and intelligent agents and under overseers. An institution of this class, and located in this city under the control, at first, perhaps, of a single instructor, is one *just suited to the present and immediate wants of the great majority of our citizens*, and it is an institution entirely within our pecuniary reach. The appropriation needed for such an institution would be very small. A moderate amount of apparatus, only, would be required, especially to start with, and a collection of minerals for ordinary use, not necessarily complete, but such as could readily be collected from the numerous mining offices in this city, would be all that would be needed. Of course the State Cabinet should he made available, under proper restrictions. Such a school would be of incalculable benefit to prospectors; its beneficial effects would soon be felt throughout the State, and its importance become more and more apparent as it progressed. One of its earliest effects would be to free our community, in a great measure, from the mistakes of honest ignorance, as well as from the vexatious impositions of shallow pretenders, who have not the shadow of scientific acquirements, or a moity, even, of practical experience, to guide them, but who still continue to bamboozle adventurers, and overwhelm confiding capitalists with a weight of words and assertions sufficient to relieve them of thousands of dollars, which are worse than thrown away, upon foolish or criminal mining schemes.

There is a flourishing school now in existence at St. Etienne, in the Department of the Loire, France, which was founded in 1816, upon a similar plan to the one here suggested, and which has been advanced from an original elementary grade to one of a very high order. The annual grant upon which this school is based, never reached $4,000, including about $1,200 for rent; and yet it has succeeded in securing large collections of every kind, a fine library, chemical laboratory, etc. The school is now under the chief direction of the Inspector-General of the Department, aided by three engineers of mines and two or three other assistants. Of course it has received private aid from time to time, to a small extent. Beyond this it has been self-sustaining. Numerous other schools, which have now arrived to positions of great usefulness, might also be enumerated, which have been very successfully established on very slender pecuniary foundations. We have no lack of men to place at the head of such a school, from among those who have had experience in similar institutions abroad.

We sincerely trust the Legislature will take this matter in hand, and look into it carefully from the stand-point here proposed. We feel confident that so small an amount as five or six thousand dollars, even, can he most usefully employed in this way, and made to benefit the State many an hundred fold ere that body is again called to assemble in the State Capitol.

A Significant, as well as "Important" Mining Advertising Bill.

The *Alta* of Thursday last claims to give the principal features of a Bill which has been introduced into the Senate, directing how and in what class of papers certain advertisements by mining companies shall be made. While the bill contains some good provisions, there are others which are not only cumbersome but also decidedly objectionable. The precise form in which the notice shall be published is given in the bill; of course the least accidental variation from the form, however insignificant, would invalidate the entire proceedings. It is proper that the name of the company should be given in full, together with the location of the mine and notice of the day when the delinquent list shall be advertised. But we see no reason why a secretary should be held to a certain form of words—no good can surely come of it. The main object of the bill would he better understood if it should read somewhat as follows: "A Bill for the Benefit of the Alta California Newspaper, requiring that all Mining Secretaries shall publish their advertisements at exorbitant rates in said paper or some one of its daily cotemporaries."

The bill has undoubtedly been got up for this especial purpose, and although it was introduced by Mr. Shafter, it clearly shows its paternity to have been derived from the *billious* John S. Hittell, editor of the *Alta California*, member of the California Legislature, etc., etc.

By the provisions of the Bill advertisements of assessments are to be published only every Saturday —*but in a daily paper*—if one is published near the companies principal place of business. Why in a *daily paper*, if but one publication a week is needed? Is it intended *to make a charge for daily insertion*, when the advertisement is published in only one issue of the week? Or does our neighbor need protection from a growing cotemporary whose Saturday's issues may more than double his own, and who, he is fearful, may get a fair share of its legitimate advertising business.

Of course no Legislature would think of incorporating such a stultifying provision in a bill of this kind. If a mining Secretary is requested to advertise but one day in a week why compel him to insert that advertisement in a daily sheet which publishes fifty columns of advertisements to ten of reading matter, in preference to a paper devoted expressly to the interest which forms the subject matter of the advertisement, and which publishes fifty columns of reading matter to ten of advertisements, and is so much the more valuable as an advertising medium. We presume the Legislature will not pass any bill whose chief aim and object is to force mining Secretaries to publish their advertisements in daily papers, when oftentimes weekly papers will better answer their purpose, and save a large amount of unnecessary expense to the companies.

The chief points of this bill appear to be to devise ways and means for extracting money from the pockets of mining shareholders for the benefit of the daily papers. It will be noticed that the bill allows the *short* assesment notice to be published but once a week, but requires delinquent notices, which are usually from three to ten times as long, to be published *daily*. Would not the public be better served and far more economically too, if the former notice was published daily and the latter weekly—say for four weeks, or on four successive Saturdays? In short would it not he more advisable to leave this whole matter of "where to publish" to the discretion of the Secretaries and Directors? No complaint, to our knowledge, has ever been made of any injustice being worked by the present law in this particular. Let it be required that the locality of the mine be clearly defined, and leave the balance to the judgment of the proper officers, and no trouble need be apprehended.

One of the provisions of the bill allows owners of

stock sold for assessments, 90 days for redemption, on the payment to the Secretary of the amount of assessments together with 50 per cent. additional. This clause would no doubt prove a prolific breeder of fat advertisements. It might work well in some cases, but in most instances it would only have a tendency to throw hindrances in the way of collecting assesments, and to that extent retard prospecting operations. The author of the bill evidently had one, if not both eyes, on the important matter of providing means for the payment of the advertising, as he has incorporated a provision providing that five per cent. additional to the assesments and all other costs shall be raised for advertising. The *Alta* very properly remarks "This act may be regarded as the most important of the Session." It certainly will be the "most important" to the pecuniary interests of that paper, should it pass.

Does the daily press of this city stand in need of Legislative aid in enabling it to retain the cash-in-advance, exorbitant rates which they are now demanding for the mining patronage with which its columns have been glutted for the past year? We are always happy to observe the legitimate prosperity of our fellow craftsmen, but we have no sympathy with the underhanded manner of forcing patronage, as evinced in the construction of this bill.

We presume the Legislature will still continue to have faith enough in the intelligence and judgment of our mining directors and Secretaries to concede to them the privilege of exercising their judgment in the selection of papers in which to publish their advertisements.

MINING SHARE MARKET.

The unhealthy excitement in the Mining Share Market, in speculative stocks, continues unabated. The panic in the Real del Monte, is without a parallel in the history of stock transactions in this city. The excitement with regard to the Lady Bryan has also greatly increased in intensity, so far as to produce transactions in those shares, to an extent greater than the entire stock in the mine. The sales of the past week have been $1,160,827 an excess of $177,860 over the transactions of the week previous. Ophir has been more fully dealt in at a material advance; 336 shares have changed hands, at from $1,595 to 1,770, an improvement of over $100 per foot on last week's quotations. A large amount of bullion is coming forward from this mine.

Gould & Curry has been inactive. No sales are reported. These shares are offered at $4,790, a slight decline from previous quotations.

Challar continues inactive at a still further decline; 77 shares only, have changed hands since our last issue. It changed hands at $290, on Tuesday, but found buyers at last evening's board at $210, buyer 30 days.

Savage is inactive. No transactions are quoted.

Daney has materially improved since last quotations, with increased transactions. We quote sales of 953 shares from $95@140, against 672 shares from $85 @125 reported last week. This improvement has been caused by the report that rich rock has again been struck in the mine.

Lady Bryan has been more active than ever, and decidedly the speculative feature of the week. Shares to one-sixth in excess of the entire stock of the mine have changed hands during the week. Opening at about previous figures, it "weakened" considerably towards the middle of the week, rallied again, and finally closed at first figures with a weak market. The reports with regard to the crushing of the ore recently taken out are very conflicting and unsatisfactory.

Overman continues inactive and may be quoted at $130@$450, buyer 30.

Potosi remains firm at $1,300@1,310. North Potosi has found buyers from $53@57½.

North American is less enquired for, but has found buyers at from $102@120, closing with a declining market.

Harmon has again met with a material advance—opening at $30½, with an upward tendency.

Caledonia Tunnel is more active at about last quotations.

Nevada, Justice Ground, has still farther improved. Opening at $175 it advanced rapidly to $225 and 240 on Wednesday, but declined to $200 on Thursday and $190@195 yesterday.

Burning Moscow opened at a decline from previous quotations, with a weak market, but closed more active and with considerable improvement in rates.

Chas. Cany has been considerably enquired after, and generally at an important advance. Opening at $10 on Monday it advanced to 17 on Wednesday, and may now be quoted at from $14@15.

We quote Baltimore American at $44; Pride of the West at from 84@95; Baltic at 162½; Knickerbocker at 32½; Desert at 18; Bullion, G. H., at 60; Sacramento and Meredith at 32½; Moss, Va., at 50; Cosala, Mex., 10; Blue Ledge 9½; Lucerne 15; Rock Island 20; Buraside 16½; Triunfo 22; El Dorado 45; Gray Eagle 22½; Crown Point Ravine 16½; Crocket Con. 14; Mt. Davidson 2¼; Benjamin 8½; Crocket 20; Mountain View, S. R., 18, b 60, and Broderick, Echo cañon, 12.

Imperial may be quoted at $170; Uncle Sam at 500; Hale & Norcross 700; Victor Hugo 15; Independent, G. H., 37; all inactive and but little inquired after.

Lafayette, G. H., has met with purchasers at from $15@22½.

We quote East Lynne, O. R., at $15½; Amador, R. R., at $170, and Josephine (copper) at 5¾.

With the exception of Real del Monte but little is doing in Esmeralda stocks. Thirty-two shares of Antelope have changed hands at $200 per share; 55 shares of Silver Hill from 13@14; 25 of Ironsides from 12@12½; 25 of Utah at 29@30. Wide West is quiet at from 25@28½.

Real del Monte, still continues a leading feature in the market. The transactions of the past week have exceeded those of the week previous, without any material change in the figures. This mine appears to be the enigma of the day, which the Stockholders, however, have determined to solve, as will be noticed by the report, elsewhere, of their meeting last evening. Bullion to the amount of $86,000 has been received from the mine, thus far, during the present month.

WASHOE STOCK MARKET.

California Academy of Natural Sciences.—We have received Volume III. of the regular annual publication of this Society, containing the proceedings of that body for the year 1863. The work contains a large number of valuable papers on matters of local, scientific interest. The efforts and publications of this Society are valuable contributions to the cause of general science.

California Made.—Mr. H. Herzer, No. 17 Kearny street, in this city, is now manufacturing a very superior article of muffles, crucibles, etc., for assayer's use. Mr. Herzer has recently commenced the manufacture of these articles, and is the first who has attempted anything of the kind in California. The chief portion of the material for this manufacture is found in this State. See his advertisement in another column.

[For the Mining and Scientific Press.]

Signs of the Times.

Montgomery street, which has of late been so crowded by "feet brokers," is being rapidly thinned out, and "feet" room is not near as valuable as it was some weeks ago. The ladies can now run a straight gauntlet through the street instead of being compelled to pursue a zig-zag course, as before. Front street has gone back to its dry goods, its brooms and cod-fish, and thinks the latter does not smell so bad after all; the shoemaker has retired to his bench and taken up his all (awl), and you can have your boots on Saturday at six. The Drayman has bought back his dray; the hodcarrier has taken up his hod and climbed the ladder again; and a carpenter can now be had to do a job at a reasonable price, who would not previously look at anything of less magnitude than a church or village. Lawyers can now be hired to attend to your case, who before would say, "really, we have not time, you must employ some one else." The stool pigeons, the decoy ducks, the setters and bloodhounds, and the vampire bats, have been called in, and the sympathetic bummer, "who was not a broker in fact," who only went into Montgomery street out of pure sympathy for his "friends," even he is gone, and his whistle can now occasionally be heard on the Plaza, which has been so long and so unkindly deserted. The "El Dorado" and the "Pony" are beginning to receive a larger share of that patronage which has been so liberally bestowed upon the "Bank Exchange," "Charley," "Ned," and "Frank." Even the "honest miner" has donned a bran new woolen shirt, sent his new suit of store clothes home by express, bought a new pick and is going back to his mine from whence he came. Mourners can now be hired to attend the funeral of Lazarus, and second hand crape for the occasion can be had of Nicholas Barebones of Bone alley, who is now at his shop during business hours.

The experience of the last few weeks has taught the community a lesson which will not soon be forgotten, especially by those who have dealt "not wisely," but "very much," in stock. We are not jubilant over individual losses, but we think it better for a few to lose than for the whole community to suffer. Men are now beginning to see that their legitimate business is the proper one for them to pursue, and they are returning to their former occupation. We see in it signs of returning health, which in the past has been disturbed by wild and unhealthy excitement. The mining share market will now be turned into its legitimate commercial channel. We have experienced brokers and men of character in sufficient numbers to attend to this business, and these men should weed out the *knave* and *counterfeit*, and then our boards will rival those of New York and London in respectability and numbers.

The mines will be worked by miners and mining engineers without kid-gloves; capital will be used judiciously and economically, where thousands of dollars have heretofore been squandered. As soon as a mine has been developed it will take its place and rank upon the list. Individual enterprise will be fostered and encouraged. The miner will obtain his supplies from the merchant, and the merchant in return will receive the product of the mine as an equivalent, and each will occupy his own sphere of business. By this brief period of excitement, which has so wildly raged upon all classes in the community, a lesson of profit will be learned, which, if it had been delayed longer, would have inevitably carried consternation and financial disaster to all the dearest interests upon our golden coast. ***

La Favorita.—Two weeks ago we had occasion to call attention to some rich specimens from this mine. The company has since received a ton of most beautiful peacock ore, and four bars, smelted from similar ore, at the company's own works at "El Real de la Favorita," near Moutezuma, Sonora. The stock of this company will doubtless rank among that of our best companies, at an early day.

Terrific Gas Explosion in a California Mine.—The Marysville *Appeal* gives the particulars of a terrific gas explosion, which took place on the 9th instaut, in a coal mine recently opened near the foot of the Buttes. A shaft had been sunk about twenty feet, and a tunnel run from the same, also about twenty feet. Inflammable gas had been noticed issuing from the rock for several days, and the precaution had been taken to "fan out" the tunnel. On the day in question, however, it appears that this work had not been thoroughly performed, and a match was no sooner lighted than the whole tunnel burst into a sheet of flame, rushing out towards and up the shaft, followed by an explosion and report equal to that from a six-pounder! Four men were severely injured, one of whom was descending in a bucket. The windlass, though strongly nailed down, was forced up by the explosion ten feet in the air. The man descending was also forced up and out of the shaft. There was one man just at the entrance of the tunnel, and near the bottom of the shaft—the same who lighted the match. He was badly burned about the face, and his hair was completely crisped. It is almost miraculous that both himself and the man descending the shaft were not instantly killed. As it happened, neither of the parties were seriously injured. The men were not aware of the dangerous nature of the gas, although they had previously set it to burning, in small jets, as it issued from the crevices. They "fanned it out" simply *because it smelt bad!*

Coal on the Colorado.—An important discovery of coal has recently been made near La Paz, on the Colorado. There are at present five lodes developed, upon which work is either in actual progress or soon will be. The discovery of this coal in the immediate vicinity of the Colorado copper mines is of great value. The Los Angeles *News* speaks of its importance as follows: "Scarcity of fuel has been the great drawback to the mines along the Colorado river, added to the great expense of procuring supplies for the mines by shipment, the almost positive certainty that all ores would have to be shipped in bulk, has always stared capitalists in the face, and to a great degree has prevented investment and the opening of lodes. Ores can now be reduced to less than one quarter of their weight. Numbers of small lodes have been discovered, which, with plenty of fuel, may be worked with profit; without it, they are valueless. We learn that a quantity of the coal from the discovery above mentioned, is *en route* for this place by the teams of Captain Tyson, and in sufficient quantity for making a thorough trial of its properties."

Meteorological.—Dr. T. R. Kibbe, of Downieville, who makes careful and accurate meteorological observations, and reports the same to the Smithsonian Institute, at Washington, has furnished us with the following notes for January, which appeared recently in the Sierra *Democrat*:—Total amount of water fallen, including snow dissolved, 2:45 inches; snow, 15:00 inches; clear days, 21; temperature of coldest day, 24° above zero; mean temperature for the month—at 2 o'clock P. M., in the shade—55⅔° above zero. The Doctor, under date of Feb. 15th, adds: "The days thus far in February have been of continued sunshine." We are obliged for his consent to furnish us regular monthly reports.

A curious fact has recently been established in some of the communes in France. It has been found that the use of threshing and winnowing machines has produced an immense amount of bronchitis and disease of the throat and chest among the laborers employed, who are exposed to an atmosphere charged with dust, which affects them so powerfully that in some parishes there are whole families of confirmed invalids. To such an extent has the evil gone that the Mayors have issued an order that all laborers employed near this machinery shall work in veils.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

STOCK EXCHANGE.

The unparalleled development of the Mineral Resources of the Pacific Slope, and the daily increasing commerce of the city of San Francisco, have rendered a

PUBLIC EXCHANGE,

Conducted on the same fair business principles that characterize similar institutions in Europe and America, an urgent necessity in this city.

The public are therefore informed that a suitable building has been erected, at 612 and 614 Montgomery St., in which will be held Daily Sessions for the sale of Stocks, Bonds, Securities, Specie, etc., under the following Board of Directors, and subject to the following Rules and Regulations:

Board of Directors.

GEORGE W. DART, President.

WALTER SPARROW,	E. H. WILSON,
JOSEPH CLOUGH,	R. O. STURTIVANT,
HENRY WILLIAMS,	D. J. O'LLAHAN,
E. FAVILLER,	EDWARD FLANAGAN,
THOMAS WALLACE,	J. DE STA. MARINA,
M. G. ELMORE,	E. W. LINSLEY.

Rules and Regulations.

1. The business of the Exchange shall be managed by a Board of thirteen Directors, to be elected annually, and to whom application for membership shall be made. Any question or issue raised touching contracts, made at the Board, their validity or meaning, shall be referred to a committee of five, for investigation and final decision.

2. The Sessions of the Board shall be from 12 to 1 P. M., and from 3 to 4 P. M., each day, Sundays excepted.

3. Only members of the Exchange shall offer Stocks, etc., for sale.

4. The public may bid upon and purchase any Stocks, Bonds, Securities, Specie, etc., that may be offered for sale.

5. Buyers of Stock who are not members must either make a deposit of Ten (10) per cent. of the purchase money at the time of sale, or have their contracts endorsed by a member.

6. Should any member or party refuse to fulfill a contract entered into by him at a Session of the Board, he shall thereafter be debarred from all privileges of the Exchange, at least until he shall have specially performed such contract.

Commissions on Sales

Of United States, State, County and City Bonds; Railroad, Steamboat, Telegraph, Gas, and Water Stocks; Certificates, Bills of Exchange, Treasury Notes, Specie, etc., one-half of one per cent.

Commission on Mining Shares:

Sale at $1 up to $10	$0 25 per foot
Sale at $10 up to $25	50 per foot
Sale at $25 up to $50	1 00 per foot
Sale at $50 up to $100	1 50 per foot
Sale at $100 up to $200	2 50 per foot
Sale at $200 up to $400	5 00 per foot
Sale at $400 up to $600	6 00 per foot
Sale at $600 up to $800	7 50 per foot

From $800 to $3,000 per foot, one per cent. Anything above $3,000 per foot, three-quarters of one per cent. 7v8-tf

Office, 511 Sacramento street, San Francisco. 3-tf

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Secretaries of Mining Companies, Attention!

SAVE TIME AND LABOR!

Crocker's

STOCK & ASSESSMENT LEDGER

IS THE SIMPLEST, MOST ECONOMICAL AND USEFUL WORK EVER PUBLISHED.

Price, $10. Copyright Secured.

☞ Read the following testimonials to its excellence: ☜

We, the undersigned, hereby certify that we have used CROCKER'S STOCK AND ASSESSMENT LEDGER, and find it one of the most useful books ever published for the purpose designed. It is a great saving of labor, and by it Secretaries can keep the accounts of Mining Corporations in a neat and compact manner, and avoid many errors that inexperienced persons might make in stock and assessment accounts. We cheerfully recommend it to the Secretaries of Mining Corporations as a great improvement on the old system.

D. W. PARKHURST, Secretary of 11 Companies, Aurora.
J. R. McFARLAN, Secretary Pyramid Company, Sierra county.
J. G. LIBBEY, Secretary Companies, Virginia, N. T.
WM. BREMMER, Secretary of three Companies, Virginia, N. T.
C. C. WARNER, Secretary Lassell Company, Virginia, N. T.
JOSEPH PETTIGREW, Secretary six Companies, Aurora.
JAMES SWEENEY, Secretary Rough & Ready Co., Mich. Bluff.
F. A. HORNBLOWER, Secretary Mountain Quartz Company.
GEO. J. NEWMAN, Secretary four Companies, Montour.
R. F. BARTON, Secretary two Companies, Virginia, N. T.
WM. E. HALE, Secretary eleven Companies, Gold Hill, N. T.
R. C. TERRY, Secretary three Companies Sacramento.
JULIUS JACOBS, Secretary two Companies, San Francisco.
C. M. ROALS, Secretary Bonesteel Company, Woodbridge.
HENRY HOEBER, Secretary two Companies, Woodbridge.
CHAS. GREIVES, Secretary Tule Co., Woodbridge.
DANIEL KELLY, Secretary Hutchens Co., Woodbridge.
E. C. LOTHROP, Secretary two companies, Marysville.
CHAS. M. GORHAM, Secretary Washington Company Marysville.
A. R. MESERVE, Secretary Garden Company, Viola.
AUG. WEIDE, Secretary nine Companies, Stockton.
ORLANDO JENNINGS, Secretary three Companies, Austin, N. T.
A. T. ARROWSMITH, Secretary Hauk's Ravine Co., Folsom.
S. M. SEELY, Secretary three Companies, Folsom.
J. R. CLAYES, Sec. Hank's Ravine Company, (No. 2) Folsom.
EO. BURROWS, Secretary German Ridge Company, Murphys.
JAS. STOBIE, Secretary Murphys Company, Murphys.

It is the BOOK OF BOOKS for Mining Companies. In fact I pronounce it without equal.

H. W. ATWILL, Sec'y Wild Rose Co., Spenceville.

Having examined your "Stock and Assessment Ledger," I take pleasure in recommending it to all Secretaries of Mining Corporations. J. HEACOCK, Sec'y Well Copper Co., Spenceville.

It is one of the most concise, appropriate and desirable books for Mining Corporations ever published.

GEO. G. BURNETT, Sec'y sixteen Co's, Gold Hill, N. T.

The Ledger can be adapted to Companies DECLARING DIVIDENDS, with a very slight change, and such will be got up for those who desire them. Copies of the work sent by mail, postage paid, on receipt of $10.

SEND FOR SPECIMEN SHEETS.

The Book is bound in Three Styles: Half Morocco, muslin sides, $16; Full bound, sheep, $14; Full bound, Russian bands, $17 50.

Published and for sale, wholesale and retail, by

H. S. CROCKER & CO., Book and Job Printers, Sacramento.

☞ Also for sale at the MINING AND SCIENTIFIC PRESS OFFICE. ☜

Liberal Terms to Agents.

GEO. G. BURNETT, Agent.....Gold Hill, N. T.

ARMOR & CLAYES, Agents.....Stockton.
H. S. HULBURD, Agent.....Placerville.

To be had at the Printing Offices and Book Stores in San Francisco.

HORTON'S TRANSFER JOURNAL FOR SALE.

IMITATION LITHOGRAPH CERTIFICATES, AND COMPLETE SETS OF CORPORATION BOOKS

Got up in Superior Style, together with EVERY DESCRIPTION OF PRINTING, at the shortest notice and VERY LOW RATES. Specimens sent if desired. Address H. S. CROCKER & CO., Book and Job Printers, 107 J street, Sacramento. 8v8-tf

☞ Parties desiring to learn the place of business of any Mining Company, should call upon us.

The Law for Publishing Legal Mining Notices.

An utterly erroneous opinion having been engendered in the minds of some (through misrepresentations and interested motives of others), that the laws of this State technically require the publication of mining notices to be made in a DAILY paper, we take occasion to quote the following positive passage concerning the publication of mining notices, from the latest statutes passed by our Legislature on the subject, March 5th, 1861, which has not since been altered or amended:—

"Notice of each such call, or assessment, shall be given to the respective stockholders personally, or shall be published once a week for at least four weeks in some newspaper published at the point designated as the principal place of business of the corporation, and also in some newspaper published nearest to the point where said mining operations are being carried on. If, after such notice has been given, any stockholder shall make default in the payment of such call, or assessment, as to the shares of stock held by him, so many of such shares may be sold as will be necessary for the payment of the call, or assessment, on the shares held by him. The sale of said shares shall be made as prescribed in the by-laws of the company; *provided*, that no sale shall be made except at public auction to the highest bidder, after a published notice of thirty days, PUBLISHED AS ABOVE DIRECTED; and that at such sale the person who will agree to pay the call, or assessment, so due, together with the expense of advertisement and the other expenses of the sale for the smallest number of whole shares, shall be deemed the highest bidder."—[Passed March 5th, 1861—Stat. 1861, p. 14.

The above is indeed plain, and we hold ourselves responsible for the assertion that a weekly issue of a mining notice is as valid as that of a daily. By publication in the MINING AND SCIENTIFIC PRESS, a wide circulation is given to notices, particularly among miners and shareholders in this city and throughout the State and Nevada Territory. A weekly publication is also secured at a material saving in cost to shareholders.

Record of New Incoporations.

The following is a record of the names of the companies, location of the claims, and the names of the Trustees mentioned in the articles of incorporation, filed in the County Clerk's office, in this city, since our last report:—

Murathon G. & S. M. Co.—Keyes District, Mono county. Trustees: E. Jones, R. H. Waller, T. Brownejohn, E. C. McComb, E. N. Conway.

Baltimore American M. Co, R.—Gold Hill District, N. T.; Annis Merrill, A. Riechel, Wm. McKenzie.

Skinner G. & S. M. Co.—Arizona Territory; H. C. Skinner, Wm. F. Walton, Silas A. Stone.

Rochester G. & S. M. Co.—Arizona Territory; Wm. T. Coleman, H. C. Skinner, Silas A. Stone, Jr.

Green Lode G. & S. M. Co.—San Bernardino county; S. F. Butterworth, C. J. Brenhani, E. L. Gould, W. H. Simmons, D. W. Connelly.

Mountain Mary G. & S. M. Co.—Amador county; M. B. Skinner, C. Goodsell, S. F. Gilbert.

Green Mountain G. & S. M. Co.—Lander county, N. T.; A. M. Hay, D. T. Berry, W. D. Robertson, W. Phillips, W. A. Thornley.

De Soto G. & S. M. Co.—Reese River; A. M. Hay, D. T. Berry, M. Rereing.

Hinton C. & S. M. Co.—Reese River; G. W. Randall, R. S. Ellis, W. Hollis, J. S. Ellis, T. F. Hinton.

Gov. Low G. & S. M. Co.—Reese River; F. L. A. Ploche, C. A. McNulty, A. M. Hay, A. Warfield, H. Marshall.

Mandarin S. N. Co.—Reese River; C. W. Randall, R. S. Ellis, Wm. Hollis, W. H. Bowman, J. S. Ellis.

Volcano S. M. Co.—Colorado district, A. T.; E. Livermore, J. H. Purkett, F. A. Busch, H. G. Livermore, C. Hamilton.

Florence G. & S. M. Co.—Tulare county, Cal.; B. N. Cortes, G. F. Whiteman, R. Hutchinson.

Masonic Tunnel & M. Co.—Lander county, N. T.; O. Wetherbee, C. B. Ellery, H. K. Eustis, G. A. Douglas.

NEVADA TERRITORY.

We gather from the Territorial papers the following names of mining companies which have recently filed papers of Incorporation in Nevada Territory:—

Yankee Blade G. & S. M. Co.—Flowery district; J. M. Caston, E. Willard, C. T. Brickmell, W. McKay, R. Mackintosh.

Knight G. & S. M. Co.—Knight district; Dennis Wood, Jas. Callup, W. C. Daval.

Monitor G. & S. M. Co.—Gold Hill district; Wm. Englinder, J. J. Clark, J. M. Donlon.

Lady Esther G. & S. M. Co.—Gold Hill district; J. H. Mallet, W. R. Schriner, J. F. Mansfield.

Live Yankee G. & S. M Co.—Nevada district; T. E. Davis, J. C Jones, M. Morgans.

War Eagle G. & S. M. Co.—Palmyra district; E. C. Shaw, D. E. Jones, J. S. Crossman.

North Whitman G. & S. M. Co.—Indian Springs district; A. Lewis, H. C. Millington, G. B. Johnson, S. J. Eddy, N. Miller.

Eugene M. Co.—Devil's Gate district; J. Craig, John Kneeland, E. Bittner.

Palmyra G. & S. M. Co.—Palmyra district; John Macnish, L. P. Cauthier, T. McDonough, J. H. Kelley.

South Baltic S. M. Co.—Gold Hill district; J. H. Latham, J. Gillig, David Bush.

Fillmore G. & S. M. Co.—Gold Hill district; H. P. Rollins, Truman Austin, J. B. Mccartney, J. W. Wedlock, W. A. Roberts.

Uncle Sam G. & S. M. Co.—Flowery district; J. H. Mallett, F. Downey, W. R. Scribner, A. J. Davis, H. N. S. McCullough.

Spanish Co.—Devil's Gate district; C. Wedmeier, E. de Arroyare, F. Alvares, A. Gerhauser, Wm. Johnson.

Rich C. & S. M. Co.—Gold Hill district; A. A. Banning, R. Apple, Thomas Kent.

Congo Seco G. & S. M. Co.—Gold Hill district; Charles Ginn, R. Pierce, Thomas Mitchell.

Florida G. & S. M. Co —Virginia district; C. W. White, R. W. Billett, W. R. Scribner, E. E. Eyre, Wm. H. Davenport.

Randolf S. M. Co.—Robert Apple, A. M. Eddington, D. F. Hodges.

Loyal American G. & S. M. Co.—Blue Sulphur Springs district; E. May, J. B. M. Key, J. Wells, J. S. Anderson, W. C. Bell.

Lyon G. & S. M. Co.—Palmyra district; D. Kendrick, D. E. Jones, J. S Crossman.

Delevan G. & S. M. Co.—Blue Sulphur Springs district; Charles C. T. J. Devoe, T. D. Warnock, Wm. Keyser, T. R. P. Dimock.

Triumph G. & S. M. Co.—Same as above.

THE BAKER COPPER MINE is beginning to attract considerable attention. The first shipment of 40 tons of ore from this mine has arrived in this city during the past week, and will be shipped to Swansea, through the house of W. T. Coleman & Co. The ore from this mine is sacked just as it comes from the surface, without assorting. The lot just shipped assays 20 per cent. in copper, $11.30 in silver, and $23.50 in gold. They are raising from three to four tons of ore daily, by windlass, from a four-foot vein—so we are informed by one of the proprietors.

NAUTICAL MAGAZINE.—We acknowledge the reception of a bound volume, for 1863, of *The California Nautical and Commercial Magazine*, of this city, edited by Capt. John H. Bell. This is a very ably conducted and useful periodical, and should receive a generous support from commercial and nautical men generally.

7v8-4w C. STEVENS, Sec'y.

Secretaries'
MINING DIRECTORY.
The Publishers of the MINING AND SCIENTIFIC PRESS will soon issue a new Edition of the MINING DIRECTORY, containing the names, as far as possible, of all Mining Companies, the location of their lodes, Secretaries' names and the Offices of such as have their principal place of business in San Francisco.

☞ Secretaries of newly incorporated companies, or others who have not their names on our old list, will please hand in a written statement of the names of their companies, location of claims, place of business, etc., immediately.

DEWEY & CO., Publishers and Patent Solicitors, 56 & 57 Covernment House, Corner of Sansome & Washington streets, San Francisco. 6v3-tf

H. S. HOMANS,
NOTARY PUBLIC,
And Commissioner of Deeds for Nevada Territory,
MINING SECRETARY, CONVEYANCER, ETC.,
New Stock Exchange rooms, Montgomery Street, next door to the Bulletin Office, SAN FRANCISCO. 1-1m

Information Is Wanted at this Office, of the place of business of the following named Companies:—
Circulo Cordo Mining Company; H. Alder, President.
Bold Rover, Gold and Silver Mining Company.

"CHIPPINGS."

One of the Pioneer Company's stages, on the Placerville route, went over a precipice, twelve miles beyond Strawberry, on Sunday week, rolling a distance of forty or fifty feet. Nobody was seriously injured.

It was stated, some time since, at a meeting of the British Association for the Advancement of Science, that of all the articles manufactured for food or drink, only two were unadulterated—viz: refined loaf sugar and common salt.

Two men were blown up, and seriously injured, by the premature explosion of a blast, in the Cedar Hill tunnel, Virginia City, on February 10th.

To make glue water-proof, soak it in water till it is soft, then melt it in linseed, assisted with a little heat. This glue is not acted upon by water or damp.

Silk articles should not be kept folded in white paper, as the chloride of lime used in bleaching the paper will impair the color of the silk.

The new King of Greece has gained the favor of his subjects. He goes to church regularly, talks with common folks, and seems inclined to be amiable and just.

Whales are not unfrequently captured in the Arctic yielding over 300 barrels of oil, and a corresponding amount of bone.

Of the present number of patients in the Insane Asylum at Stockton, 109 are from San Francisco and 28 from Sacramento.

Rich copper discoveries have been made in the Russian river country.

The Petaluma *Argus* has completed its fourth year. It is an excellent paper.

The Virginia City *Union* states that two millions of dollars have been expanded on buildings in Virginia during the year just ended.

A steamship company is organizing in New York, whose steamers are expected to make the trip across the Atlantic in seven days.

On Saturday, the 19th of December, the moon was nearer to the earth than it has been before for fifty years.

It is proposed to form a society in London for the suppression of prize fighting.

The loss of life on the French railways is only one in seven millions of passengers.

Failed to See It.—Mr. Editor: An evening contemporary, in commenting upon what Washoe and the mines generally have done for San Francisco, sums up everything in two palatial mansions—one not made or likened after anything in heaven or upon the earth; the other revamped and refurnished to suit the taste and please the fancy of its lord. In this "summing up," we think that our contemporary has overlooked the "vast pile" which it has accumulated by advertising in its surfeited columns just to accommodate the dear confiding mining public. Let the mining interests remember this, and let not the "Ass" longer be Moderator, and the "Mole" Inspector-General, of this business. Assessments.

Bullion from Nevada Territory.—During the week ending Jan. 16, Wells, Fargo & Co. shipped from their office in Virginia City bullion to the value of $203,291. For the week ending Jan. 30, 650 lbs. of bullion, worth $197,951. For the week ending Feb. 6, the same party shipped 6,950 lbs., worth $189,094. For the week ending Feb. 13, they shipped 7,847 lbs., valued at $222,740. From Aurora, the shipment by Wells, Fargo & Co. for the month of January was $114,000.

The Mexican Mine, at Virginia City, is now working rock which averages $100 to the ton. This mine recently turned out 670 tons of ore—100 tons of which, it was estimated, would yield $800 per ton, and the entire of the balance fully $100 per ton. The company employs forty men at the mine.

Before Cutting the Leaves of this journal, stitch each No. through the back, or fasten with a large pin, and you will have a paper in the most convenient form possible for reading or reference.

Mr. Jarvis Jowett is our duly authorized advertizing agent and collector in this city.

WHEELER'S
Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors; as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

To Druggists and all Prescribing for Neuralgic and Nervous Cases—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

STAGE NOTICE.

NEVADA STAGE COMPANY.

ON AND AFTER SATURDAY, JANUARY 2d, THE STAGES OF this line will run in connection with the Sacramento Valley Railroad from Auburn Station, each even date in the month, until further notice, to Allison's Ranch, Grass Valley, Nevada, Eureka, Steamboat Springs, Virginia City, and all points in Nevada Territory.

Office, corner of Front and K streets, Sacramento, opposite the What Cheer House.

N. B.—This line has been running stages for the last six years, and has never had an accident. Passengers can depend on their safety and comfort, as there are no persons in the employ of this line who are not stagemen. [6v8-1m] J. S. McCUE, Proprietor.

HEPBURN & PETERSON'S.

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machines now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

Antidote for Scales and Incrustation

Formed by the Deposit of Water in Steam Boilers.

Used in all Boilers at the London Exhibition in 1862, By order of Her Majesty's Commission.

G. VENARD,

No. 627 Front Street, San Francisco,

SOLE AGENT FOR CALIFORNIA AND THE PACIFIC COAST.

This Compound has undergone the examination of the most competent Chemists in France and England, and has been pronounced all over Europe the BEST ARTICLE ever found for removing Scales in Steam Boilers, this great evil of industry.

The main qualities of this Compound are: that it removes the scales of any boiler in a few days, no matter how old, and it does not injure the metal in the least. The raising of steam is made easier. It saves fuel and work, and prevents all dangers of explosion.

The Compound has now been in use for three years, and the great success obtained in the Old World induced the undersigned to introduce it in this State, being confident of the patronage of this enlightened and industrious country. G. VENARD,

No. 627 Front street, San Francisco.

Crockett Copper Mining Company, Copperopolis, Cal.—Notice is herchy given, that at a meeting of the Trustees of the Crockett Copper Mining Company, held January 2d, 1864, an assessment of one ($1) dollar upon each and every share of the capital Stock of the Company was levied, payable immediately, in gold coin, to the undersigned, or to J. M. Pike, at Copperopolis; being assessment No. 2. On the 1st inst. the Trustees als o levied another assessment, being No. 3, of one ($1) dollar per share upon each and every share of the capital stock of the Crockett Copper Mining Co., payable the same as assessment No. 2. Persons having interests in the Company are requested to come forward, provo title, and receive their certificates of stock. ISAAC HECHT, Sec'y,

No. 417 and 419 Sacramento street.

San Francisco, February 5th, 1864. 6v3-5t

Office of the Montezuma Gold and Silver Mining Company, No. 62 Government House, corner of Washington and Sansome streets, San Francisco. Feb. 5th, 1864.—Notice is hereby given, that a sufficient number of shares of the capital stock of the Montezuma Gold and Silver Mining Company, standing in the name of the following person, will be sold at public auction, at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, on WEDNESDAY, March 9th, 1864, at 11 o'clock A. M., to pay an assessment of 12½ cents per share, levied April 27th, 1863, together with expenses of advertising and sale, unless said assessment is previously paid, with accruing charges—viz: Hugh McCormick; 247 shares; amount due, $30.87½. By order of the Board of Trustees.

6v8-5t C. A. CRANE, Secretary.

Triunfo Gold and Silver Mining Company.—At a Meeting of the Trustees of the Triunfo Gold & Silver Mining Co. held January 23d 1864, an assessment of One ($1) dollar per share was levied on each and every share of the assessable stock of the Company, payable immediately to the Secretary, at the Office of the Company, No. 1 Government House, in United States Gold Coin.

5v8-5t HENRY S. BROOKS, Sec'y.

Table Mountain Copper Mining Company, Office 528 Montgomery street, San Francisco, January 16, 1864.—Notice is hereby given to the stockholders of the Table Mountain Copper Mining Company, that an assessment (No. –) of one dollar ($1) per share was this day levied on each and every share of the capital stock of said Company, payable immediately, in U. S. gold coin, to the Secretary, or to J. M. Pike, Superintendent, at Copperopolis. By order of the Board of Trustees.

4v8-1m M. G. ELMORE, Secretary.

Bankers Gold and Silver Mining Company, Gold Hill District, Storey county, N. T.—Notice is hereby given that the Trustees of the Bankers Gold and Silver Mining Company have this day levied an assessment of fifty cents per share on each and every share of the capital stock of said Company, said assessment payable immediately, in gold coin, to the Secretary, at the office of the Company, No. 620 Washington street, or to R. C. O'Neill, Superintendent, at Gold Hill, N. T. W. AUGUSTUS KNAPP, Sec'y.

January 18th, 1864. 4v8-1m

Prima Donna Gold and Silver Mining Company, Devil's Gate District, N. T.—Notice is hereby given, that the Board of Trustees of the Prima Donna Gold and Silver Mining Company, at a meeting of said Board, held January 19th, 1864, levied an assessment (No. 5) of fifty cents on each and every share of the capital stock of said Company; said assessment payable immediately, in gold coin, to the Secretary, at the office of the Company, No. 620 Washington street, Room No. 3.

4v8-1m H. B. CONGDON, Secretary.

Mount Eden Mining Co.—Notice is hereby given, that the Board of Trustees of the Mount Eden Mining Company, at a meeting held January 2d, 1864, levied an assessment of One Dollar on each and every share of the Capital Stock of said Company, said assessment payable immediately in gold coin to the Secretary, at the office of the Company, No. 620 Washington street, Room No. 3. H. B. CONGDON, Secretary.

San Francisco, January 16, 1864. 3-5t

Black Swan Gold and Silver Mining Company, Reese River District, Lander county, N. T.—Notice is hereby given, that the regular annual meeting of the stockholders of the Black Swan Gold and Silver Mining Company will be held on the first day of March next, at 4 o'clock P. M., at the Company's office, No. 305 Montgomery street, San Francisco. By order of the Trustees. J. S. LUTY, Secretary.

San Francisco, Jan. 27, 1864. 5v8-5t

Brown's Bronchial Troches for Coughs and Colds.— A neglected Cough, Cold, an Irritated or Sore Throat if allowed to progress, results in serious Pulmonary Bronchial and Asthmatic Diseases oftentimes incurable. Brown's Bronchial Troches reach *directly* the affected parts, and give almost immediate relief. For Bronchitis, Asthma, Catarrh, and Consumptive Coughs the Troches are useful. Public Speakers and Singers should have the Troches to clear and strengthen the Voice. Military Officers and Soldiers who overtax the voice, and are exposed to sudden changes should use them. Obtain only the *genuine*. "Brown's Bronchial Troches" having proved their efficacy by a test of many years, are highly recommended and prescribed by Physicians and Surgeons in the Army, and have received testimonials from many eminent men. Sold by all Druggists and dealers in Medicine in the United States and most Foreign countries at 25 cts. per box.

Agents for California, Redington & Co., San Francisco. 5-1m

MINING AND SCIENTIFIC PRESS.

List of Contents for January.

No. 1 of Volume VIII—January 2, 1864.—Mastodon Thigh Bone—Illustrated; Mining Review for 1863; Practical Education; Legislative Aid; Taxing the Mines; Gold Mines of New Zealand; Mining and Metallurgical Journals; A Trip to the Mines—Mariposa county; Silver-Mountain District; The Lady Bryan Mine; Miscellaneous Items; Knight's Ferry—by our Traveling Correspondent; Hints to Prospectors; Letter from Lower California; Stock Remarks; Summary of Mining News—Gleaned from Various Sources; The Mining Interest; Mining Associations; Keystone Concentrating Works; Report of Stock Sales for the Week—Prices Bid and Asked; List of New Incorporations; Recent Patents; California Inventions; Mining Companies, Assayers', Stock Dealers', Machinists', Foundrymen's, and other advertisements.

No. 2—Jan. 9.—Hunter's Grain Separator—a new Invention, illustrated; "A little Learning" not "A Dangerous Thing;" Crimea House—Copper Mines, by Our Traveling Correspondent; Reese River Correspondence; Summary of Mining News—California, Washoe, Humboldt, Reese and Owen's River Items; Annual Report of the Gould & Curry Mining Company; Owen's River Letters; Copper Mining in Canada; Short Paragraphs; Industrial Facts; Annual Treasury Shipments; Encourage Home Industry; Beginning of the New Year; Home *vs.* Distant Mines; California Copper Smelting Works; California Academy of Natural Sciences; Mining Share Market; Our Enlargement; Record of Mining Incorporations; Patent Department; The State Library; About Marvelously Rich Mines; Copper, Its Price and Demand; Editorial Items; Stock Reports; etc.

No. 3—Jan. 16.—A Patent Stone-Breaker—with Illustrations; Extraordinary Mental Developments; Reese River Letters—Smoky Valley, Winter, Mines; Sanitary Remarks; Hints to Prospectors; Mining Summary—Placer county, Sierra, Yuba, Reese River, Humboldt, Washoe, Esmeralda, Lower California and Colorado Items; Statistical Articles; New Patents; Lost Arts; Editorial Paragraphs; Mining Share Market; Ophir Co. *vs* Burning Moscow; Our Harbor Defences; New Incorporations; Stock Reports; Branch Mint Report; Petroleum as Fuel; Varieties; New Mining Notices and Industrial Advertisements.

No. 4—Jan. 23.—Indian Bar Copper Mines—Illustration of the Washington Mine; Correspondence—Chinese Camp and Jamestown; Reese River Letters; Summary of Mining News; Washoe Mining Stocks; A Durable Ink; The Metal Market; Roll of New Incorporations; The Opinions of Our Neighbors; Miscellaneous Information—Mechanical and Industrial Facts; Patent Department; A Mining School for California; The Mechanics' Institute and Fair; From Lower California; Magnificent Specimens; The Beauty of the Season; Silver Bricks; Mining Share Market; A Mining Advertiser, Editorial Paragraphs; Important Success; Mining Laws—a good suggestion; Stock Reports; Total Stock and Mining Transactions for the week; Chippings; New Mining Notices, etc.

No. 5—Jan. 30.—Rock Drilling Machine—with Illustrations; Human Fossils in California; Mechanism—Ancient and Modern; Coal Oil—"A Warranty that is Safe to Bet On;" Correspondence—Sonora, Tuolumne county; A Trip to the Mines—Mariposa county; Letter from Arizona; Mining Gossip—Edited by Frank Warddell; Letter from Humboldt; Importance to the California Miner of a Knowledge of Mineralogy; The Miners' Laboratory, containing a valuable article on Assaying Copper Ores; A Reese River Manslon; The "New Chemical Agent in Warfare;" Copper Coating Boiler and other Iron Plates; Navigation of the Colorado; Mining Incorporations; Short Editorials; San Francisco Stock Sales; San Francisco Mining Share Market; Washoe Stock and Exchange Board; Mining Incorporations for 1863; etc.

The Mining and Scientific Press contains 16 pages in each No., and 417 in each volume; two volumes a year. Terms, in advance, 1 year $5; 6 mos. $3; 5 copies, 1 year, $20. For sale by all newsdealers. Liberal comulsions allowed all who act as agents.

DEWEY & CO., Publishers.

Cor. Washington and Sansome streets, San Francisco.

Two Good Canvassing Agents can find profitable employment by calling at this office. None but active and competent men need apply.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the Mining and Scientific Press. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

Correspondence from competent writers is respectfully solicited upon all topics of interest to the general readers of the Press. Persons possessing a knowledge of new discoveries, curiosities, important improvements or developments, who have not the time or experience to write their observations elaborately, can send us the substance in a few words, and we will care for the rest. The real name of the author must be received, which will be kept confidential.

We have received No 1 of the enlarged Mining and Scientific Press, published by Dewey & Co., San Francisco. It is greatly improved, and gives promise of an excellent, able and reliable journal.—*Marysville Daily Appeal.*

Mr. A. T. Dewey, a journalist of experience, has become associated with Messrs. Ewer and Smith in the proprietorship and conduct of this paper. It inaugurated the new year by doubling its size and other improvements, and is now a first class journal for miners and mechanics, as well as for the general reader.—*Sacramento Daily Bee*

This journal comes to us this week with a new head and enlarged to the full size of the *Scientific American* published in New York—sixteen pages. Those who take an interest in mining, industry and art should not fail to read the prospectus of the Press, which may be found in our advertising columns, and those who may desire to see copies, intending to subscribe, will have specimens sent free on application by letter to the office of publication.—*Mountain Messenger, La Porte.*

We have received the first number of the eighth volume of this interesting paper. It is now under the control of friend Dewey, and has been enlarged to sixteen pages. We commend it to miners, stock dealers, and others taking an interest in the development of the mineral lands of this State. It can be had for $5 a year, and if preserved will make two volumes of interesting matter, containing 416 pages each.—*Red Bluff Independent*

We find its pages filled with mining news and articles of interest to miners and scientific men. Persons interested in mines in this State, Nevada Territory, Arizona or Mexico, should certainly subscribe for the Press.—*Napa Reporter.*

It has been enlarged from eight to sixteen pages, and promises to be a valuable publication.—*Sierra Democrat.*

Is is full of the most valuable reading matter. Those at all interested in mining affairs should subscribe for it at once.—*Alameda Gazette.*

It is devoted to news, art, science and progress, and should receive a liberal support.—*Solano Press.*

The Mining and Scientific Press comes to us enlarged to double its old dimensions, and otherwise improved. The Press is the only journal on this coast devoted exclusively to mining and scientific matters, and should be read by miners everywhere. It is published weekly, at $5 per year.—*Oroville Union.*

CAUTION.

Notice is hereby given that the following mentioned Certificates of the stock of the Prima Donna Gold & Silver Mining Company were, on the 5th day of February 1864, sold at public Auction, according to Law, for non-payment of assessments due thereon, and will not be transfered on the books of the Company, viz:

By order of Board of Trustees.

M. G. ELMORE, Secretary.

The above sale is postponed until Saturday, January 30th, 1864 at the same place and hour. By order of the Board of Trustees

2 M. G. ELMORE, Secretary.

The above sale is postponed until Saturday, February 27th, 1864.

6v8-3t M. G. ELMORE, Secretary.

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides, and the evidence of any error upon our part will be received in friendship, and treated with respect.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Back Numbers.—We have a limited number of past volumes of the Press on hand, which will be sold, neatly bound, at reasonable rates. A portion of the back numbers of the paper can be had by the single copy.

Editorial.

VENTILATION OF MINES.

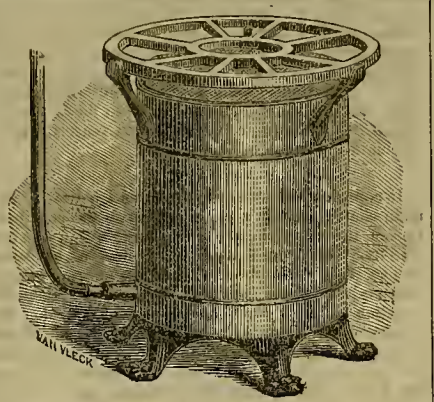
In pursuing this subject we have thought proper, while the nearly fatal accident from an explosion in a mine near the Marysville Buttes is fresh in the minds of our readers, to throw in a chapter upon

GASES IN MINES.

Had the four unfortunate men, who were so severely injured by that explosion, been in possession of the information herein communicated, that accident might never have occurred. The two gases to be chiefly guarded against in mines are "carbonic acid" and "light carburetted hydrogen" or "fire damp."

Carbonic Acid is heavier than air, and will hence seek the lowest places in a mine, or shaft. It supports neither combustion or life; hence its presence may be readily ascertained by lowering a lighted candle, before descending where its presence is suspected. If the candle goes out, life cannot exist there, and the deleterious gas must be expelled before descending. This gas is produced to a greater or less extent in all mines, by the respiration of the workmen, the burning of candles, explosion of powder, etc.

Light Carburetted Hydrogen, or "fire damp," is lighter than common air. Its specific gravity is 0.999, barely light enough to admit of its ready diffusion through the atmosphere, but not sufficient to cause it to move upward, through it, and float away. Its presence may be readily known by the nauseous, suffocating sensation which it produces. It is not dangerous to respiration until it constitutes $\frac{1}{3}$ of the entire volume of atmosphere. At this point the amount of oxygen is insufficient to support life, and the lamp ceases to burn. But the most dangerous property connected with this gas, and that which renders it so dreaded by miners, is its tendency to explosion, when mixed in certain proportions with common air, and in that condition brought in contact with a flame. When it is mixed with air in the proportions of 1-30 to 1-15 of the whole volume, it burns gradually, but without explosion. Its presence may be recognized by an elongation of the flame of the lamp or candle. The elongation is barely perceived when the proportion is 1-30, and gradually increases, until the proportion reaches 1-15. When it reaches 1-14, the inflamation is gradually propagated through the entire gaseous mass — oftentimes, running off from the flame, in a ball or globe of fire, and continuing in a straight direction towards the point of escape, or greatest accumulation of gas. The late gas explosion, under the Masonic Temple, in this city, was a case similar to the one we are supposing. It will be recollected that the person striking the match noticed as it were a ball of fire, start from the lighted match and run towards a certain point—the locality of the leak—at which it suddenly exploded, bursting in fragments the heavy plate glass of the doors and windows. At the point where the match was lighted, the proportion of gas was probably about 1-14th; nearer the leak it must have been greater, probably about 1-12th, or perhaps 1-11th; of course, when the flame reached that locality an explosion, more or less violent, must have ensued. The proportion which will produce the most violent explosive force, is from 1-8th to 1-9th. When



A NEW GAS COOKING STOVE.

the proportion exceeds that point the explosive power is less, until it reaches 1-3d when the mixture will not burn at all. It is somewhat remarkable that nothing but a flame, or an electric spark will produce the above results. Hot iron, when plunged into the mixture, is without effect.

Speaking of the non-explosive qualities of this gas, under certain conditions—and we may here remark that the common illuminating gas, in general use, is almost identical with the "fire damp" of the mine—reminds us of a circumstance which took place in Boston at the time of the first introduction of gas into that city, and when its nature was not so well understood by the masses as now. The gas company had erected a large gasometer on that part of Washington street called the "neck," which was even then a populous neighborhood. The people of that vicinity remonstrated on the ground of danger from an explosion, particularly from the possible contingency of a stroke of lightning. The gas superintendent was summoned before the Common Council to "show cause," etc. Among other questions he was asked what would be the result if the gasometer should be penetrated by a stroke of lightning. The superintendent very quietly answered, that the most probable result would be that the electric spark, although on the gigantic scale supposed, would be effectually *extinguished*, by such intrusion! Certain it is, that when unmixed with atmospheric air, few substances are more antagonistic to fire than inflammable gases.

To return from this digression—the gas of which we are speaking escapes from the mud of swamps and stagnant water, and is always more or less abundant in all coal mines. It oftentimes rushes from seams in the rock and coal with such force as to produce a slight hissing sound. We are told that the men at work in the mine, already alluded to, at the Marysville Buttes, had noticed the entrance of this gas into their tunnel for several days previous to the explosion. They had even amused themselves with *setting it on fire* as it issued from the seams in the rock. And yet did not think of the danger that might arise from its collection. In coal mines it is most frequently found issuing from the seams of rock which lie between the veins of coal. It is usually noticed in greatest abundance, near faults, threads and other irregularities in the rock or coal.

The presence of one or both the gases alluded to may always be found in all unfrequented mines and shafts, especially in the neighborhood of coal and mineral springs. It is one of the most important and indispensable requirements that the miner should be able to disembarrass himself of these noxious gases and secure the presence in his mine of pure air. The object of this series of articles on the "Ventilation of Mines" is to teach the miner how to accomplish this end most effectually and cheaply, and to inform him at some length with regard to the philosophy of the means which he may be required to employ.

[TO BE CONTINUED.]

A GAS COOKING STOVE.

The accompanying engraving represents an improved arrangement for the use of gas for cooking and heating purposes, invented by Messrs. Heald & Binney, of this city, and for which letters patent have been applied for through the Mining and Scientific Press Patent Agency. The principal novelty in this invention consists in the peculiar arrangement of the burners, by which the heat is most effectually economised, and when necessary for baking or warming, uniformly diffused over the desired surface. The stoves themselves are portable, and can be conveniently placed upon a shelf table or the floor, if desirable, and readily connected with any ordinary gas fixtures by the pipe which is upon the left of the engraving.

The advantages of these stoves over those which use spirits, in immunity from danger, as well as in economy, must be apparent to every one at all acquainted with the use of spirit lamps. A single stove of this description is amply sufficient to do the ordinary cooking of a small family, at less expense than the same amount of cooking could be done by the use of wood, while all trouble of kindling fires, and dirt and dust of ashes, fuel etc., is entirely avoided.

Gas is now being extensively used for cooking purposes at the East, even in hotels and restaurants, as well as in private residences. In this city, especially, where wood commands an exorbitant price, and must still farther advance, the use of gas for cooking purposes may ere long become quite desirable. For heating also, in our mild climate, where fires are needed only at intervals, and then in but small quantity, gas will be found quite as economical as wood, or more so, and incalculably more advantageous in point of neatness and convenience. We would recommend to all desirous to test its practicability and economy to procure one of these neat and convenient articles here represented. Further information may be obtained on application to Dr. John Heald, 313 Montgomery street.

From El Paso.—Our El Paso correspondent writes that several companies in that vicinity are making arrangements for an early development of their mines. Dr. F. J. Hughes, an old Washoe miner, has recently purchased an interest in one of the most promising mines, and has taken contracts to sink prospecting shafts on two others. The arastra recently put up on the Rochester lead had commenced operations, and returns of the yield would soon be made. We presume that working tests will also be made of other leads, the results of which we shall be pleased to learn. We have much confidence in the value of the mines of that vicinity. The specimens which we have received from that region are certainly very promising.

Correspondence.

San Andreas, Calaveras County.

FROM OUR TRAVELING CORRESPONDENT.

Mr. Editor:—It is some three years since I visited this town. It was then beginning a downward course which I am sorry to see has continued to the present time, and left it much depopulated and stagnated. The great question here, of late, has been the removal of the county seat from Mokelumne Hill; and a large sum of money has been collected from the citizens of both places and spent in law, which I do not think will pay them a very good interest. Generally through the county there is a strong feeling for the change, and the vote at the last general election was cast in its favor, and now it goes before the Supreme Court for final adjustment.

With this dispute we have of course nothing to do, one way or the other, beyond the extent it effects the mining interests of the neighborhood, and that I assure you is considerable.

I have been pondering over the matter lately and I really think it would be good policy for each of the towns, within the copper-system, to raise a sum of money, whatever each may be able to do, and loan it out in small sums, on reasonable terms, for the development of their own immediate mines. There can be no safer investment or more promising speculation. The Atlantic States, to begin with, want 28,000,000 lbs. of copper annually from some country. If the metal could be obtained at reasonable rates they would use twice that amount. In three years time, I am certain, if our copper mines were thoroughly opened and properly worked, we could readily double the present home produce, viz: 12,000,000 pounds. Now, gentlemen take your pencils and calculate the profits. See the present price of copper in New York, and then tell me whether I am wrong in saying that one third of the capital sent annually to Washoe, if invested in our own copper mines, would not almost quadruple our annual revenue, and pay off the State debt in the bargain. One thing however is sure, two thirds of the gold we now export, to pay for what we buy, might be kept at home for internal improvements, and that would be about $24,000,000. Some perhaps think this estimate too high. Very well, reduce it one half—I am willing—for even then the result will be immensely in favor of my argument. Take for an illustration the towns of Copperopolis and Mokelumne Hill during the last three years. For the one, copper has built up a respectable town, with six hundred voters; a large and flourishing business of all kinds, daily increasing; abundance of employment for laboring men and mechanics; and nine steam mills in constant occupation. The county seat, for the other, keeps a large town in a state of chronic decrepitude; has not built a single house; gives no employment to laborers or mechanics; brings no permanent population to the place; and at best only keeps some nine whisky mills in full blast. What then would be the general prosperity if we could only arouse public attention to this important subject, and get the numerous copper mines I have reported as in a healthy condition, once thoroughly opened?

I have been led into these remarks because on an examination of the country I find that the veins of the extreme northern system show themselves as strongly here as elsewhere; but the general interest in this source of wealth is dead and low for want of capital. It is on this ground that I presume to advise the people of each place to drop the county seat question, withdraw what money is deposited to contest the same, and devote it to the development of their mines; for in the end I am sure if it is thus applied it will yield a better interest than in the hands of the lawyers; at least I think the "indications" more flattering. It is a bad thing to look for "yellow sulphurets" amongst that class of our population. Near the town, about a mile below on the Stockton road is

GOLD HILL CLAIM.

It contains 2,400 feet in 150 feet shares. Two shafts—first 50, second 60 feet. In this claim they have made a serious mistake in the location of the vein, as I afterwards proved to Mr. Founken. I think it is a continuation of the North Star which opens so handsomely at Jamestown. For two miles from the first shaft and again near Mokelumne Hill, near the Flume House, it shows equally strong. This I believe is the richest vein in the northern system. The second shaft sunk by the company is not on the vein, and besides being in serpentine it is a location so badly chosen I doubt if it will ever be useful to any one. On a parallel vein to the east is the

CHIMNEY ROCK.

Such at least was what I understood the name. Here they have run a very handsome tunnel through good slate and talc, 125 feet with about 25 feet more to run before cutting the vein. Altogether the prospects are good. Work is to be resumed immediately. East of these two veins, a short distance, is the

ELLIS.

It contains 1,100 feet in six shares. They have sunk two shafts, respectively 42 and 70 feet. The latter cannot possibly be on the vein. The first is sunk in serpentine which is so strangely out of its right course and so blended with the vein, from a slide, that it presents many difficulties. The vein rock, though uncommonly hard upon the surface, is strongly developed. I should advise the company to cut from the shaft into the vein, only a few feet, as the quickest and safest plan of ascertaining their future prospects. This is a promising vein, but the company have chosen a bad site on which to commence operations. Almost anywhere between this shaft and Mr. Ellis' house would have been better. Below this claim some two miles, at Greasertown, on the main Calaveras, is the

FAIRCHILD.

It contains 100 feet in four shares I believe. The main shaft is 103 feet. I think it is on the continuation of the Copperhead and remarkably promising. The foot wall opens splendidly, showing a vein some 20 feet wide, with a good cast of mundic, copper pyrites and yellow sulphurets. Work here is suspended; but ought by all means to be resumed. Mr. Bovee, of the Contra Costa Laundry, is one of the principal owners, and Mr. Fairchild is anxious for him to see this report. I do not know whether he takes the Press or not. Let the company quit drifting and go on down; from the character of the slate I judge they cannot have many more feet to go. On the opposite side of the river, on the continuation south is the

CALAVERAS UNION.

It contains 2,200 feet in 22 shares. The main shaft is 40 feet, showing as I understand, equally well, though I did not see it. Work is suspended till the Fairchild shaft goes down, and that will develop both claims. Mr. Snyder informed me the two companies would probably consolidate, or else they would bear a proportion of the expenses of sinking the Fairchild 25 feet deeper. The idea is a good one and ought to be carried out without delay. We now return to San Andreas and go north. Mr. Bowman was polite enough to give me a seat in his buggy and we first visited the

UNION TUNNEL CO.

This claim contains 2,300 feet in 12 shares. The tunnel is in 500 feet and was originally run for gold, but about half way they cut an exceedingly rich vein of copper and sunk a shaft upon it. They had to contend with so much water that work is suspended till the company can erect machinery. This will eventually be a good claim. We proceeded thence, some five miles, to the

CALAVERITAS TIN CO.

It contains 2,400 feet in 12 shares. Main shaft 50 feet, showing the vein reliably developed. Work being suspended I could not go down. Here, as at Murphy's, the peculiarities had puzzled the knowing ones, until Dr. Oviatt suggested the probabilities of tin; there sure enough it is. From this place we proceeded west some two miles to the

BUCKFIELD.

It contains 4,200 feet in single foot shares. The main shaft is 39 feet opening well on good croppings, with foot wall well developed and a vein already three feet wide. The vein appears to be promising, but I think from the character of the rock they will have to go to considerable depth before they can hope to reach good ore. The Buckfield will eventually hold a prominent position. Again, two miles on the same course, we proceeded to the Angels Camp road to the

SAN ANTOINE.

It contains 3,200 feet in 12 shares. Main shaft 126 feet deep. This, in my opinion, judging from external appearances and the character of the rock, is also a continuation of the North Star. The walls show themselves 100 feet apart. They have left the foot wall and are now going down on the hanging wall. The rock hitherto has been quite soft, but they have recently struck a very beautiful, rich, talcose slate, of great promise. Work is suspended for the present. This vein I think will some day make a great noise.

These are all the copper mines under development in the vicinity of San Andreas, except the Darling, the particulars in regard to which I did not obtain, but which I will mention in my next, in speaking of the gold mines of the district, which are well worthy of a separate notice. I shall now turn to the copper mines of

MOKELUMNE HILL.

At this place they have been under the impression that they had no copper veins, and I confess I was for some time at fault in locating them. After a little hunting however with Mr. Darling, who has had considerable experience in the Irish and Australian copper mines, and who has a very correct knowledge of every branch of the business, I finally located the veins of the Jamestown system, five running on the east side of the town and two on the west. The trouble here lies in the fact that the veins are entirely covered with lava, so much so that only two of them crop out. From this time forward the people here may rest satisfied they have just the same prospect for copper as their neighbors, whose apparent good fortune they have envied. I hope this fact will create a new life and energy amongst them, for it is sadly needed. If the people of Mokelumne Hill desire to keep up with the spirit of the age they should take the Mining Press, and learn the great things going on in the world. As it is they are two years behind the mining spirit of the day. Rouse up, my old friends, to the wealth within your grasp, and then this great exodus to Reese River, with which you are threatened next spring, will not take place. If you would keep among you what few are left, imitate the example of Copperopolis and Camp Seco—develop your own mines. Mr. Innes has located immediately below your race-track what will probably prove one of the richest veins in the entire formation between Hog Hill and St. Domingo, and it looks as well there as any where else. Besides you have the two tin veins developed at Happy Valley, immediately west of the town. Stir up, then, from your lethargy and remember that "God helps those who help themselves." At present there are only two claims at work in this neighborhood. The first is about a mile east of the town—the

INDEPENDENT.

It contains 3,800 feet in single shares. Main shaft 77 feet opening well, with both walls developed and vein three feet wide, healthy and promising. At present, from being opened in a low rugged ravine, the walls are bolted and pinched. The vein rock however is a handsome black slate with a good cast of mundic and yellow sulphurets. I consider the claim as a promising one. A short distance east of this, on another vein, is the

ALADIN.

It contains 4,000 feet in 20 shares. Main shaft 85 feet showing a rich, handsome vein 4 feet wide, and both walls well developed. This is a fine claim in every respect; the vein may be struck any day, and I have no doubt in a short time developments will be made that will wake the Mokelumnians up, who now sit under their awnings and shade trees, enjoying a cigar, the genial sunshine, balmy air, splendid fruit, with heaps of *law*, and think it very fine, will find to their sorrow there is something better than all this, so far as the great interests of the community are concerned, and that is a reliable and well developed copper mine.

L. H.

A New Use for Alcoholic Fluids.—Rum has recently been applied to an entirely new purpose. In addition to being used to paint the human face, by internal application, it is now employed as a substitute for turpentine in the mixing of paints. An exchange suggests that still farther experiments should be undertaken to ascertain if its kindred alcoholic fluids—brandy, whisky, gin, etc., may not also be more usefully employed in that direction than in their present universal use of painting humanity. By the late telegraphic reports from the East we notice that "whisky" seems to be a more important institution, just now, than "nigger." Government seems determined to make something out of it, at all events—in the way of taxes. The committee on "Ways and Means" has probably derived a few hints from our recent Russian visitors, whose home government, long since learned how to turn the morbid tastes of their people to good account in the way of replenishing the national treasury. Russia derives an annual revenue of *ninety millions* of dollars from *brandy alone!* Its a better idea for our own government to carry out, and one that will pay more too, than taxing the mines.

(Written for the Mining and Scientific Press.)

A Trip to Surprise Valley.

FROM AN OCCASIONAL CORRESPONDENT.

Messrs. Editors :—An account of this extensive and fertile valley, lying amidst the sage brush and alkaline deserts of this Territory, may not prove uninteresting to your readers. You may therefore receive the annexed description as a faithful representation of that which really exists.

This valley lies immediately under or east of a spur of the Sierra, about 100 miles northwest of Humboldt, and 40 miles north of the Honey Lake road—a valley affording a natural road from Surprise to near Deep Hole Station. The Sierra, or its spur, is clothed with the most luxuriant herbage to the snow line, while the entire range is densely timbered with the sugar pine, so excellent for lumber purposes, and with cedars adjacent to the valley itself. The numerous streams supplying the lakes are of considerable volume and velocity, and will afford ample and perpetual power to the mills that must, ere long, be erected to cut the timber of the mountains, and convert the grain of the valleys into food. The soil is entirely free from alkaline deposits, being a rich alluvium, perfectly loose, and of considerable depth ; while each year brings from the surrounding mountains a fresh supply of all the requisites to make up the pabulum of the various crops that can be produced. The temperature of this valley is much higher than almost any other portion of this Territory ; its protected position and low altitude render it a most desirable agricultural, cereal and root-producing locality, while the natural growth of a superior quality of grass is at present equal to three ton of hay to the acre. The soil is far superior to that of the Russian river bottoms. These are also the opinions of a farmer from that section, who visited and examined the soil of this valley. Besides the large streams that issue from the western range, numerous springs well-out from the foothills, so that each ranch has at hand ample means of irrigation where needed. The valley is well nigh surrounded by mountains, and is about 70 miles by 30, length and breadth, with a low, narrow valley, affording, as before stated, at its south end an easily outlet to the great highway between California and Humboldt, *via* Honey Lake. The increasing population of this country, the daily development of increased mineral wealth, the numerous towns springing up, and the great amount of travel on the Honey Lake road, must soon make farming and the lumber trade in this region pursuits of immense profit. From no other place yet discovered (and I do not think any other such timber land will be found nearer—indeed, I may speak positively on this point, for I have traveled this county extensively.) can lumber be supplied so readily and cheaply. The consumption in this county of flour, horse feed, potatoes, beans, etc., etc., amounts monthly to many tons, and is steadily on the increase, all of which can be produced in this valley.

The Humboldt river bottom cannot begin to touch this valley in the yield of any one article, while the liability to overflow must render farming on the river uncertain. The demand for the above articles will be very considerable on the Honey Lake road. It is by that route that all this county receives its freight, and from the improved character of the Chico and Tehama roads, the travel in this direction will increase. Moreover, this coming season there will be a large amount of travel to the Boise and Northern mines, with every prospect of a steady communication, *via* the Humboldt river, to and from the American Possessions north.

When the great Pacific Railroad re-echoes to the sound of the rolling car, then how immensely will the demand for produce be increased. Again, it will not be long ere the English will find that they too must lay their rail from Columbia, to unite most probably with the Pacific Railroad. Already contracts have been made by the English Government to carry the telegraphic wire across the continent, soon to be followed by the locomotive.

Let us look at another item. The Goose Creek mountains, on the Great Emigrant road, about 250 or 300 miles northeast from this, are known to be rich in mineral, and will most probably be prospected the ensuing spring ; hence an increased population will be drawn hitherward, and every man and beast that comes into this county is so much custom and consequent profit to the grain and hay producer of Surprise Valley. Some of your readers may think me visionary ; but those who have lived here for the past two years, and witnessed the growth of this section, must be convinced that this is no day dream, but that a very short period will more than realize the statements herein made.

The ranges which bound Surprise Valley have not been prospected, but the indications warrant the belief that gold and silver will be found there. The ranges 30 miles east, and 50 miles south, towards Pyramid Lake, have several mining districts located on them, and will shortly be thronged with a busy people. Fairview District, where the Silver Wave and Vicksburg ledges are located, is being opened even now, and soon we may expect that the new town site of Pyramid City will become something more than a name.

Many settlers are moving into this fertile valley, and ranches, mill sites and lumber claims are already pre-empted, so that by spring we may reasonably anticipate a goodly society of the wealth producers of a country. The farmer ranks foremost to the miner, though both reciprocate and develop the country. It is highly important that every encouragement and protection should be given to the settlers of this valley, for should ruthless war break out amongst the great nations of earth, and the specks in the horizon, though now "no bigger than a man's hand," grow rapidly and mightily, we on this coast might be suddenly cut off from the resources of the East, and left to shift as best we might. Here in this valley we can raise our own flax, hemp, tobacco, beef, mutton, wool, etc.; for the pasture lands are incomparably superior to anything in California, and all the cereals, fruits and edibles necessary to man's use can be produced in abundance. None need fear droughts; the snow-capped Sierra will always keep the streams well supplied.

Such is a brief view of this valley, so far as examined, destined to become the granary of this country. When I further survey this natural garden, if anything worthy of note occurs to me, I will communicate it. Fish and game are plentiful. H. O. G. S.

Humboldt County, N. T., Feb. 12, 1864.

[Written for the Mining and Scientific Press.]

From the Humboldt Mines.

Barbersville, Sierra Dis't., Feb. 1, 1864.

Messrs. Editors :—According to promise, I will give you a few items in regard to such claims as have come under my observation since I returned to this district. I have been absent a little over two months, and on my return I find the prospects for the future of Humboldt County brighter than ever, and the time is not far distant when this will be counted as one of the richest mineral districts known. I don't know of an instance where work has been prosecuted, either in tunnel or shaft, where any reasonable expectations have not been fully realized. In some instances work has been temporarily suspended for want of funds, but in nearly every case will be resumed again as soon as arrangements can be made for capital ; and that will come as soon as men of means become properly acquainted with our resources.

I have visited a number of ledges since I returned, which I will speak of in rotation, as I saw them ;—First the Badger and Annie Copper Co., are going ahead with their tunnel. They are in now nearly 200 feet, with good indications for striking their lead very soon. The company have great expectations when the lead is struck, as the croppings and spurs show very rich in silver and gold. Near by, and running parallel, is the Crœsus, celebrated for its richness in gold. This company is not doing anything just now, but I understand are to resume work very soon, and that they furthermore intend to erect a mill in the Spring. The superintendent recently sent some of the refuse rock to San Francisco, where it was worked by mill process, and yielded at the rate of $79.00 per ton in gold. The ledge is very large. They have both a tunnel and shaft in progress. The next company which I visited was the Steamboat Co.'s Works, on the Chrysopolis lead. Found no one at the works, as the contractors had completed their contract for fifty feet of tunnel the day before. The tunnel is in some 80 or 90 feet ; the ledge seems to be some two feet thick and looks well. Near by is the Ne Plus Ultra Company, who have a tunnel in progress. The quartz and mineral is very similar in character to the Chrysopolis. The Grass Valley Co., on the first extension north, have an incline down on their lead 26 feet, which shows splendid mineral the entire distance. The rock will pay from $150 to $200 per ton. The lead is about 20 inches thick. I next came to Judge Watson's Camp, just in time to share his hospitality in the shape of a good dinner, to which I assure you I did justice. After the repast was over the Judge accompanied me to the Gem of the Sierras, where he is taking out very rich ore. He has had several crushings, and each excels the other in richness. The last yielded nearly $500 per ton at Fall's mill, and he showed me quantities of the same kind lying about the shaft, which was only some 18 feet deep. The ledge is over four feet thick, two feet of which is a black mineral of the richest kind.

Yesterday I visited the Tullulah Company's Works, on the Neptune lead ; the superintendent, Mr. Banks, was absent, but the foreman, Mr. Askew, showed me around the works which in every respect spoke well for the superintendent. Nearly every thing in the shape of cars, track, fan for clearing smoke from the tunnel, that is made of wood or iron, has been made by his own hands ; the tunnel is now in 289 feet, where they have struck a lead ; from this point they have drifted to the right, sunk an incline to the depth of 60 feet, where they have water, and are taking out some as rich ore as you would wish to see. A sample has already been forwarded to your city. The lead in the bottom of the shaft is over four feet thick. A little to the south of the Neptune, is the Empire Company. Ophir Series, where I saw several tons of very rich ore. At the shaft the ledge is four feet thick and works over $200 to the ton, at Fall's mill. Close by the Ophir is the Miama, where I saw another lot of ore that I should judge would yield several hundred dollars per ton. The Auld Lang Lang Syne are putting in their pans and will soon be ready for business again. The Larimer tunnel is still going ahead, on the first north extension of the Eclipse Series. The Eclipse Tunnel Co., will soon be in full blast again. In these tunnels, the indications are good for striking a lead soon. In their upper tunnel we are looking for big things when their leads are struck. Work on the Humboldt has stopped for the present, as the company has not been properly organized, and some parties in California owning interests have not paid in their assessments. The shaft is down some 80 feet, with a four foot lead, and shows less galena than it did near the top. As I came through Unionville, the other day, I was shown very rich ore from the Anderson lead, in Buena Vista District. This lead is about three feet thick, with about 15 inches of this rich class of ore. I might go on and mention many more prominent leads in this and other districts, but I am already occupying too much space in your columns. C. J. H.

Virginia City.—The interest with regard to outside claims still continues unabated. The impression seems to be constantly growing stronger that the Lady Bryan is a true mine, and will soon rank among the good claims of the Territory.

A correspondent of the *Union* says "There must be some merits in Flowery District, judging from the best criterion—the amount of work being done, and the vigor with which it is prosecuted. There are many old claims now being worked in a vigorous manner, and no small number of new claims and relocations that are being worked in a laudable manner. Immediately to the north and east of the Lady Bryan, we find the Desert, the Lady Bryan No. 2, the Opal, all of which are being prosecuted toward an early development with a worthy determination. New claims are daily being located in Flowery District. But a few days since there was located between two of the above named claims—the Lady Bryan No. 2 and Opal—a claim called the Lizzie. On this claim was developed one of the finest prospects in the District."

American Flat still continues to attract a large share of attention. The appears to be, as we understand it, that "the Comstock lead permeates the Flat, then disseminates into numerous spurs and ramifications, affording each claim a shadow for its pretensions of being an extension of that lead."

Mining Suit.—The Potosi Mining Company, on the 18th instant, commenced, in Virginia City, an action against the Chollar Company, and obtained from Judge North a preliminary injunction, and an order to show cause why a perpetual injunction should not be granted. The bonds required were $30,000, and were assumed by persons of undoubted wealth. The order is made returnable on the eleventh day of March, in Virginia City. Reardan & Hereford are attorneys for the Potosi, and Stewart & Baldwin for the Chollar Company. This, says the *Union*, is one of the most important suits that has been commenced in this city for a long time.

MINING GOSSIP.

EDITED BY FRANK WARDDELL.

[In this department of the Mining and Scientific Press we propose to give various and brief accounts of mining companies, and shall, under all circumstances, write *plainly* respecting their merits and de-merits; furthermore, we shall bring to light such transactions as may come within our knowledge regarding the "Bulling and Bearing" system and the "underground" actions of both Trustees and Brokers. We are vain enough to suppose, at all events, that we have the "inside track," and shall, without *hesitancy or fear*, give to the public, from time to time, a peep behind the scenes whenever the occasion justifies. If, in doing so, at any time we have fallen in error as to our report, and it can be so proven, nothing will afford us more pleasure than to make the "*amende honorable*" by correcting the same. We shall feel under obligations to those who are interested in stock if they will communicate to us such items as may come under their observations, and which will prove interesting to our readers. This department is open for free disenssion to "one and all." Our object is to render justice to every one. Communications, in all cases, must contain the author's name and address to insure publication, which will be kept *strictly confidential*—otherwise no notice will be taken of them.]

Real Del Monte.—Nothing new has transpired of an important nature relative to this mine since our last issue. Matters and things regarding the investigation proceed slowly and will of course require time and great care to be taken with the examination. The committee has appointed a competent gentleman to act in the capacity of bookkeeper, who commenced his labors on Thursday, the 25th instant. (Well may we use the term labor, for he will find it so, we presume, before he gets through.) Stockholders and the public generally, are looking forward with much anxiety to the report of this committee. We may be wrong in our conjectures, but we nevertheless do think that the said report will bring to light some very *strange developments*, which will show that the affairs of this once prosperous company have been trifled with, and the stock of the company consequently well nigh ruined thereby.

It was a wise move when the stockholders adopted *our suggestions*, and held their meeting, and we feel the more proud to think that our efforts have been the cause of having many different companies wake up to their interests, and to call similar meetings. We plainly saw that the method we proposed was the only correct one whereby stockholders could find out how affairs stood in companies so mysteriously managed. We determined to give our views of the matter to the public, regardless of what the consequences might be—which no other journals have done, fearful that it might injure their circulation. Nothing like being free in speech and independent in action—speak as you deem proper (always using discretion) and more especially when you know you have the right on your side. We did so and the result has been an unlooked for and gratifying one. We have secured hundreds of new subscribers and well wishers, and the thanks of the community. We have accomplished our object and are satisfied with the result.

Such is Life.—It is rumored that the old Secretary of a company which now stands prominent before the people purposed taking a trip upon the Continent, having made enough of the "necessary of life," commonly called money, out of the stock; for be it known that he sold out at the *right time*, so the wise ones say. We, deeming ourselves not so wise, make the enquiry and would like to be informed what the term *right time* signifies? Since an informal meeting of the stockholders, we have been told that he most *wisely* concludes to defer the much anticipated pleasure trip until some future day. What a contrast! To think while hundreds have been deluded and almost ruined, he, the well known, mysterious, silent-tongued, non-informant Secretary, (even to his most intimate friends) should have made enough so as to afford a trip abroad, make a "spurge" and astonish the natives. Oh, no! we guess he did not have the inside track; not he, indeed!

Lady Bryan G & S Mining Co.—This company have called a meeting of its stockholders to take place on the 12th of March. The principal object of the meeting is to take into consideration the propriety of reducing the number of the shares of the stock. We think the idea an advisable one, and would recommend many other companies to follow the same example.

After them in Earnest.—Mr. Caleb T. Fay, the Assessor of the Internal Revenue, is after the Stock Brokers and Secretaries in a fine style. Much commotion has been the consequence, and already a decided increase in the funds of Uncle Sam. The Stock Brokers and Secretaries are very indignant, and say that the representative of Uncle Sam is rather severe upon them; that during these ruinous stock times he ought to be more lenient toward them, especially as they have been such good customers in the time of their prosperity. Mr. Fay, however, does not see it in that light, and makes the following demand, irrespective of their groans and supplications. So, gentlemen, "walk up to the Captain's office," buy your stamps, fix up all your back certificates and await calmly for the call of the Assistant Assessors.

CIRCULAR.

Office of the Assessor of Internal Revenue, 1st Dist. } California, San Francisco, Feb. 23d, 1864. }

To Buyers and Sellers of Stocks:

I have been informed that stamps upon certificates of stock are, in numerous cases, not properly and lawfully cancelled with initials and dates, thereby leaving them in condition to be taken off and used again.

"I am also informed that persons who transfer stock by power of Attorney, or endorsement, are in the habit of signing their names to blank powers of attorney, and delivering stock to purchasers or brokers without affixing stamps to such certificates. This act is a plain violation of the law, and makes all such transfers null and void.

The only way to avoid using stamps lawfully is for parties personally to transfer stock, and in such cases it would be well for persons transferring stock to endorse their name *above* the blank power of attorney, and *not below it*, thereby preventing the possible use of such power, or the raising a question as to violation of law.—[A severe joke.—Ed. Press.]

The law in relation to stamps upon certificates of stock has been so carelessly executed, that the Assessor has deemed it necessary to examine all transfers of stock in the city; but in order that persons who have innocently violated the law may have no injury done them, ten days will be allowed all persons and companies to correct previous errors. After the ten days have expired, Assistant Assessors will be instructed to visit every corporate company's office, and make such examination as will satisfy them that the law is observed.

In future, the law must be strictly adhered to, or the prescribed penalties will be enforced."

It is a satisfactory reflection to know the operators in "wild cat," stock will feel this injunction most severely.

Cannot Agree.—There seems too be much ill feeling existing among the different members of the San Francisco Board of Brokers. From what we have been able to learn it is all caused by simply a misunderstanding as to their rights, as members. One "clique," composed of some seven members who, by the way, are also members of the new "Open Board," maintain that notwithstanding a resolution having been passed by the board, to the effect that no member can belong to two boards at once, say, it does not hold good, and, furthermore, they cannot lawfully be suspended on the ground that the board is an incorporated institution. The rest of the members argue to the contrary. Thus the "war goes on." We regret to see such difficulties arising and such disgraceful actions between gentlemen as have taken place of late. It is to be hoped that their affairs will e'er long be amicably settled, and a more dignified course pursued toward one another in future. We are inclined to believe that such are the wishes of the majority of the board. Gentlemen, "knock down" arguments never avail anything, and always prove fruitless. Good common sense is the article to use, combined with sound reasoning. A "hint to the wise," we trust, is sufficient."

Stockholders of the Real del Monte.—Your attention is directed to an advertisement which appears in our issue of to-day. It is very important that each holder of the stock should at once pay the one dollar per share levied by the committee—so that no unnecessary delay shall occur in "ferreting" out the mysterious proceedings of this company.

Lady Bryan.—A letter from the superintendent of this mine, dated Feb. 23 and received here on the 25th, states, among other things, that "he had sunk a shaft 20 feet, passing through small quantities of very fine ore. After reaching a depth of 55 feet he would commence taking out ore." His plans are such as will ensure a more speedy progress than heretofore in taking it out. The letter also states that the ore looks more like the Ophir than any he has seen outside of that lode.

Gloomy Times.—The past week has been anything but a prosperous and encouraging one for the stock brokers. Stocks have been dull, and the fluctuations in several leading stocks have caused many severe losses. Sales in the different Boards were not numerous, transactions outside have also been limited. We hope that the month of March will prove more successful to stock operators than the one they have just passed through.

Mexican Mine.—Messrs. Alsop & Co. have disposed of this mine, within the past week, to an incorporated body, for the snug sum of *One million three hundred and sixty thousand dollars!* As there are only 100 shares in the company, it thus averages at the respectable figure of $13,600 per share.

Burnside.—A movement has taken place in this stock on account of a telegraphic despatch having been received here, stating that they had struck a good quality of rock, assaying $135 to the ton.

Santa Rosa G. & S. M. Co.—There seems to be more life in this stock, and it is said that the reports received from the mine are of a more favorable character.

A Correct Idea.

We have been informed, "officially," that the directors of several mining companies, in this city, have notified their stockholders, by circular, that all the notices of meetings, assessments, etc., relating to their several companies will hereafter be published in the Mining and Scientific Press: the only mining paper in the State, all sufficient as an advertising medium, and one eminently worthy the support of mining men and mining companies generally. We are certainly thankful for such expressions of appreciation in behalf of our efforts, on the part of the mining public, and shall continue to labor to the best of our ability, in earnest effort to benefit the miner individually and mining interests generally. We could accomplish much more than we are now doing, if our mining friends would still further concentrate their patronage upon our columns, and we think moreover that we could serve them quite as well as any other journal. Our circulation is already large and rapidly increasing. The matter given in our columns, and its typographical appearance, speaks for itself. As an advertising medium for mining notices, and such business matters as it is desirable to bring before the mining public, we believe the Mining and Scientifc Press is second to no other paper in the State.

Map of the Northern Mines.—A gentleman has submitted to our inspection a map of the Northern Mines, including also Humboldt and Reese River. The Boise region portion of this map has been drawn under the direction of Mr. Jordan, who was the original discoverer of the Jordan Creek mines. It is much more full and correct in relation to the Boise mines, particularly, than any of the maps yet published, and we should judge its publication would not only be a good speculation but add materially to the geographical knowledge of one of the most important mining regions yet opened between the Sierra Nevada and the Rocky mountains. We have found this map of material assistance in preparing an article for our next issue, under the head of "The Northern Mines."

Summary of Mining News.

Yuba County.—The interest in the Brown's Valley mines seems to keep up. A correspondent of the Marysville *Appeal* of Feb. 21, gives the particulars of the work now in progress on fourteen different claims, and adds that the work of prospecting for new ones is still going on. Workmen are now engaged in preparing for the reception of the engine designed for the Paragon company. The Sweet Vengeance company have a very fine 20-stamp mill. The Tunnel Co. is considered the "pet" of the Valley. They have an open cut 60 feet and a tunnel in 150 feet. They have before them the outcroppings of *eleven* leads, and will probably strike several blind ones. The Pennsylvania Co's mill has been laying idle all winter for want of a sufficient head of water to move the wheel. The late rain has furnished this element, and the mill commenced crushing on Sunday. The Jefferson Company, for last week's run, cleaned up $10,000. Pennsylvania stock went up several notches on the strength of this result, as well as all the Brown's Valley ledges.

Sierra.—The *Messenger* learns that considerable excitement has recently been created at Eagleville in consequence of the discovery of a rich ledge there. Some capitalists have offered to build a mill, at a cost of $50,000, for one-half the claim. The Union Co.'s mill, at Wet Ravine, in Southern Sierra, is turning out large amounts of bullion. This company commenced operations about one year ago, and first took out money enough with hand mortars to build an eight-stamp mill, since which time they have paid all expenses, and divided $4,000 to the share. The claim contains 1,800 feet, divided into nine original shares. The mill turned out $47,000 for the first 28 days run. The Sierra *Democrat* of the 20th inst., says that a blast was shot off in the main tunnel of this company, on Wednesday of last week, which resulted in loosening about half a barrel of specimens, which are actually more gold than rock. No gold was visible on the outside of the rock before this blast, which will yield them several thousand dollars. The common rock from the mine, in which gold is not visible, yields from $40 to $50 to the ton. The Sierra *Democrat*, in speaking of this portion of the county, says: "A new era is dawning in South Sierra. A manifest vitality and activity in quartz mining pervades the community. There are already six mills built and about ready to commence crushing. The construction of five others, on a grand scale, is in contemplation, and they will be erected as soon as Spring opens—mostly by San Francisco and Sacramento capitalists.

From Plumas County, we learn that the Indian Valley Co. expected to have their large mill, designed for crushing rock from the Waterworth & McKianey lead, in operation on Monday last.

Tuolumne.—The *Courier* states that the Columbia G. & S. M. Company have commenced the erection of a five mill on their claim, at Experimental Gulch, half a mile from Columbia. The mill will be equal to anything in the county, with 28 stamps and two 1,500-pound crushers, driven by a 40-foot water wheel. The vein has been thoroughly prospected, and found to be rich. The principal owners reside in this city and Stockton. Mr. Ferguson, late of this city, is the mine superintendent. The *Courier* adds that they have many other equally promising enterprises in that vicinity, and all that is lacking is capital to develop them.

Esmeralda.—The Durand Co., near Bodie Creek, and about two and a half miles from Aurora, are building a fine mill, to be completed by the first of next month. The machinery, according to the *Times*, looks lively. There will be 24 stamps and 16 Varney pans and 6 separators. The engine is a horizontal 60-horse power, with 4-foot stroke, and has been built by Donahue, Booth & Co., of this city. It is now being put up by Mr. Royer, the engineer of the company. The Durand have a very promising mine on Middle Hill. According to the *Star*, the Golden Age and Empire Co. had their first crushing, of 48 tons, recently, which yielded an average of $105.78 to the ton. Specimens from the Maggie Green promise well. The Utah is spoken very highly of, and much surprise is manifested at the low rates at which it is quoted in this city. The new mill of the Antelope is rapidly approaching its completion. The company has a large amount of rock out, and are ready for crushing. Fine results are expected when the mill starts. The *Times* speaks of some splendid rock taken from the Crockett claim. The company has about 250 tons of rock out, and ready for crushing. The Moscow is also taking out fine rock.

Reese River.—The *Reveille* of the 13th inst. says that two tons of rock from the Western Oregon recently yielded $720. A crushing for the Vineyard lead returned $1,205—amount of rock not given. Fifty pounds from the Fort Sumter, Amador District, yielded $26—at the rate of $1,300 to the ton The Clifton mill is engaged in crushing 60 tons of rock from the Savage lead, upon which the *Reveille* says: "This shows a confidence that is encouraging to see—owners of mines furnishing mills with such large quantities of ore. We hope the example will be followed. If miners find that they have a good paying ledge, they should immediately get out as much ore as possible, and send it to the mill, not as has heretofore too often been the case—have a ton or two crushed now and then in order to send a small brick down below to gratify friends or keep up the spirits of a few interested parties. Rock is of no use to any one lying at the mine. Better get out the mineral and put it in circulation." Five pounds of Silver Moon rock from Union district yielded at the rate of $416 to the ton. Great confidence is felt in the general richness of the mines in this district. The miners are working their mines constantly, and new and richer developments are made every day. Mr. Buel is now on his way to Reese River with a 24-stamp mill. The mill will be set up at Watertown, on Big Creek, and will be driven by water from the creek. The water in this stream has just been measured and found to amount to just 244 inches. A saw-mill is in operation on the creek and lumber can be obtained at $200 per thousand. Two months ago there were only about 500 persons in this district, but now there are about 1,600. This would appear to be the most promising mining settlement in that region.

The Humboldt Mines.—The recent reports from the Humboldt mines are of a decidedly improved character. The *Register* of a late date, says of the mines of that district that "the world is beginning to learn that there is such a thing as Humboldt silver mines. A few months ago, you could see no mention of this region in any of the California papers. A few adventurous people, however, got thrown off from the mass that went tumbling, like porpoises in a shoal, down the current of curiosity, and brought up in Humboldt. Once here, the trip was too tiresome and expensive to return without giving some attention to the pretensions of our mines. Here and there they straggled off, hammer in hand, one at a time, guided by some enthusiastic settler, on tours of inspection; incredulous still, but willing to see the truth. A few days of prospecting, and they caught the enthusiasm of the old Humboldters, and frankly owned that the half had not been told. They had not imagined that a region could rest so quietly, where the mountains were so crammed with precious metals. They were surprised and delighted. The pioneers have not had the advantages of a fevered market in which to sell their stocks; but better, they have had time to discover what their claims are really worth, and to learn by experience of others the best mode of realizing fair prices for them.

The Moonlight company, at latest dates were delivering rock at Fall, Price & Co's mill, and will soon be able to keep the mill constantly at work. A small lot of their second class ore yielded $280 per ton. They have a pile of selected rock, which they think will yield from $300 to $500 per ton. It is now said to be pretty certain that Fall's mill will hereafter have all it can do and that bullion shipments will be regular. The next trouble will be, strife between owners of ore as to which shall take precedence at the mill Several companies have been pushing work lately, so as to be in shape to supply the mill in the spring. The great want in this canon now is about three more mills. Lang Sync mill in Sierra, will soon be running, and that will be some relief—as all rock from Sierra heretofore has been worked here. One locator in the Silver Wave company recently sold out all his interest, except 20 feet, to Virginia capitalists for $10,000.

It is stated that a substitute for cotton has been discovered by a firm in Liverpool which with length of fibre, delicacy, elasticity and great strength, is equal at least to East India cotton It can be produced to any amount at 6d per pound. It has been patented in France, and its applicability and utility is so evident that the Minister of the Interior has intimated his intention of forwarding its use by all means in his power.

Washoe Stock Boards.—Parties in Virginia City have recently established an informal association, which is known as the Pi-Ute Stock Board. It is said that at some of the meetings of this body more sales have been effected than at the regular meetings of the regular stock board. According to the *Union* of the 19th inst., the latter institution has recently passed a resolution imposing a fine of $500 upon any of their members who in any way engaged in the purchase or sale of feet in the so-called Piute Board. The *Union* says that the business of the two Boards have become somewhat complicated; difficulties were beginning to ensue, and these and other reasons caused the action taken by the Board, to the great chagrin of some of the minority. What effect this resolution will have on the character of outside boards remains yet to be seen. As the expenses of carrying them on are not large, they will no doubt continue to transact business as usual.

Personal Explanation.—We have received a private letter from Hon. John S. Hittell, assuring us of his entire ignorance, at the time of its introduction, of the "Mining Advertising Bill" referred to in our last issue, and we have given him the benefit of his denial of its authorship in our columns, with pleasure. The bill appeared so peculiarly adapted to the favor of the *Alta*, in *all* its features, that we felt perfectly warranted in ascribing its parentage to some party directly interested in its pecuniary welfare. We admire Mr. Hittell's denial of all connection with the covetous and unjust act at present shouldered by Mr. Shafter.

Suit against the Del Monte.—We understand that Messrs Messick & Van Voorhees, of this place, have commenced suit against the Real Del Monte Company, for counsel fees. They sue for $40,000, and have attached $28,000 in bullion and the mill property belonging to the company.—*Esmeralda Times, Feb. 19th.*

We understand the above suit has since been compromised for $15,000.

We further learn from the *Times* of Feb. 22d, that Messrs Quint and Kendall have commenced a similar action against the Pond Company, claiming $30,000 for professional services.

The "Standard" Company, Amador District, Reese River, (being the first south extension of the "Amador,") are running a tunnel and sinking an incline upon one of their ledges, in which they have struck fine silver bearing quartz, in all respects the same as the original "Amador." This company has sometimes been confounded with a company bearing the same name but located in Reese River District, and which has been really at various prices in our market.

Salt Mill.—The Virginia *Union* says that the Sand Springs Salt Mining Company are now forwarding large quantities of salt to Virginia City and adjacent localities. They will soon put up a mill for producing a fine article of table salt. This salt mine is located about sixty miles from Virginia, on the Reese River road.

Another Mint Wanted.—The Boise *News* says that gold dust which is worth $16 per ounce only returns the owner $13 per ounce after paying the expenses of sending it to San Francisco and getting the coin back to Bannock.

Grass Valley.—A private letter from this place says:—Not much doing in copper this winter, but I am of opinion that many rich mines will be opened within fifteen miles of this place within the coming year.

Territorial Laws.—The Virginia *Daily Union* has been selected by the Territorial Legislature to publish the laws of the Territory of Nevada.

Professor Whitney's Lecture.—Extra copies of the Mining and Scientific Press of February 6th, 1864, containing the lecture of Prof. J. D. Whitney, (State Geologist,) on "Mining and Its Relations to Civilization and Progress," can be obtained by calling at this office.

Mechanical Department.

New Engine for the Gould & Curry Mill.

Quite a number of our citizens embraced the opportunity of a leisure day, on Monday last, to visit the Vulcan Foundry, on First street, for the purpose of examining a new engine which has just been built there for the Gould & Curry Company's Works at Virginia City. This is the largest stationary engine which has ever been built in San Francisco, and is a piece of work highly creditable to the enterprising firm which undertook it, and marks another important step in the progress which our city is making in mechanical advance.

The engine, at the time of our visit, had just been completed and set up, with every part in its place. It presented a really elegant and artistical, as well as substantial appearance. A massive bed-plate, 21 feet long and 6 feet wide forms the base of the structure. The cylinder is securely bolted to one end of this bed-plate, and is itself a fine piece of work, 30 inches in diameter and 6 feet stroke. At the opposite end is the main pillow block, while from the center and from each end of the bed-plate, elegantly moulded columns, supported by diagonal braces, all in gothic style, rise to a hight of 17 feet, to support the beam centers and sustain a neat entablature extending around the upper portion of the engine. Brackets are bolted to this entablature, upon which a light platform will be placed, surrounded with iron standards and a rail or guard of polished brass. The platform will be reached by a spiral iron stair case, and from it the engineer will be able to examine every portion of the upper works of the engine. The engine beam is of an approved pattern, 15 feet long and 7 deep. The connecting rod is 15½ feet long, of wrought iron, with the usual braces. It is a handsome piece of forging and neatly finished. The crank is also of wrought iron, as is the shaft; the latter being 12 inches in diameter and 14 feet long.

The valve motion to this engine is something new on this coast and is claimed to be superior to anything else of the kind in use. It consists of piston balance valves, operated by an eccentric. The steam is distributed by a reciprocating motion, similar to that of an ordinary slide valve. The variable and self-adjusting expansion gear, or cut-off, is controled by the governor, which will regulate the motion of the engine, and modify it to the slightest variation of power which may be required. Its operation is transmitted to a cam through a peculiar mechanism that sets ahead or retards the stroke of the cam, causing the cut-off to occur at an earlier or later point of the stroke of the engine. This cam is connected to the piston valves and has the effect of twisting them, without interference with and independently of their reciprocating motion. The governor is entirely automatic in its action, and the adjustment and variation of the cut-off can be wholly left to its influence, while at the same time it is readily adjustable by hand, when desired. The pressure in the boiler may be barely sufficient to keep up the motion or, on the contrary, it may be at the highest limit of tension allowed by the safety valve; the engine may be working without any other resistance than its own friction or it may be exerting its maximum power; or else a change, gradual or sudden, may take place from any of these conditions to others; yet under all these circumstances, or a combination of any of them, the governor, by its reaction on the adjustable cut off, will constantly regulate the admission of the proper quantity of steam and maintain a uniform rate of speed.

While the engine is in motion an index, conveniently placed, and divided off, shows precisely at what point of the stroke the suppression of the steam occurs. This peculiar arrangement was invented and patented by McNaught, of Glasgow, Scotland.

This engine, when working at its intended speed of 25 revolutions per minute, under 100 pounds of steam, and cutting off at an average of from ¼ to ⅓ stroke, will exert a force of from 260 to 300 horse power, and is capable of running 150 stamps, with their necessary compliment of pans, etc. Its cost, aside from boilers, shafting, etc., has been about $30,000. It is now being packed up for transmission over the mountains, where, in addition to the mechanical force it is expected to exert, it is confidently believed that it will also exert a re actionary power upon Montgomery street, which will be readily discernable in increased dividends upon, and an upward tendency of Gould & Curry stock.

Some idea of the size and proportions of this engine may be formed from the fact that its main shaft weighs 7,000 pounds, the bed-plate 14,000 pounds, its beam 7,500, its cylinder 4,200 and the entire engine exclusive of boilers, *eighty tons*. Every part of the engine has been cast, forged and finished at the Vulcan foundry, with the exception of the main shaft which has been made from a spare piston rod formerly belonging to the steamer Golden Gate. The successful completion of this work forms quite a card for the Vulcan Iron Works and is highly creditable to the skill and energy connected with that establishment. The engine was built under the immediate superintendence of Mr. R. G. Carlyle, engineer for the Gould & Curry Mining Company. The works where it has been constructed are under the direction of Paul Torquet, as manager, with C. R. Stiger, R. Ivers and S. Aitken, proprietors. Joseph Moore is the efficient foreman of the machine shop, and has had the mechanical charge of the above described work. The engine was designed and drawn by F. Euler, who has been for years connected with these works as draughtsman.

Insect Power.—The muscular power of the common flea, as displayed in the distance which it will measure at a single spring, is familiar to every one. Perhaps the common beetle comes next to it in the proportion of its muscular power. Professor Goss states that he once placed one on a smooth table and covered it with a large glass bottle, filled with milk, and having a hollow under it like a common champagne bottle. Presently, to his great surprise, the bottle commenced moving slowly along the surface of the table, propelled by the muscular power of the beetle imprisoned underneath it. The weight of the bottle and contents was three and a half pounds, that of the beetle half an ounce; so the insect readily moved 112 times its own weight! A better idea of this feat will be obtained by the parallel supposition of a lad, say fifteen years of age, and weighing one hundred pounds, imprisoned under a monstrous bell weighing five and a half tons, and pushing the same along over a smooth pavement by exerting his muscular force upon its interior surface!

Spiegel Iron.—Spiegel iron is getting much into use at Sheffield, in the Bessemer process, (as a carbonizer,) and also for making steel, the charcoal quality suiting very well for this purpose, on account of the large proportion of maganese and carbon it contains. The British Government are now experimenting on this class of Iron at Woolwich, with the intention, it is understood, of using it, like Krupp of Essen, in the manufacture of steel cannon. For rolled armor plates, it is also likely to come much into use, being used in a process at present kept secret. There are various sorts of Spiegel iron, but the charcoal-made quality is considered to be the best suited for the purpose named.

Spontaneous Heating of Iron.—Cast iron when brought into the air after it has been for many years under salt water, has become red hot. In June, 1836, some cannon balls were raised from the ship Mary Rose, which sunk in a naval engagement near the Isle of Wight, in July, 1545, nearly 300 years before. These balls all became hot on exposure to the air, and fell to pieces. The cast iron gratings, after being long immersed in the porter vats in the large breweries of London, grow hot when the porter is drawn off, from a similar cause.

If you wish to prevent rust, rub the rusty iron with boiled oil, in which some red lead has been mixed, on a warm day, and the rusting process will be arrested.

A New Electro Magnetic Engine.—The mechanical world has for years felt a strong conviction that the time is not far distant when electricity will be brought into practical use as a motive power, and eventually be made to supersede steam. On several occasions we have apparently been upon the very verge of this consummation, but as yet, only to be doomed again to disappointment. The present announcement, may, and very likely *will* result in failure; but each new effort appears to be a step in advance, and the opinion is constantly gaining strength of the ultimate accomplishment of the *desideratum*.

The inventor of this new magnetic engine is Capt. John Reeves of New York; the engine is rotary, and is constructed upon a principle entirely different from anything heretofore introduced. The method on which Capt. Reeves founds his principle for producing and augmenting motive power by electricity is peculiar in its machinery, but comparatively similar in its nature to that by which other elements are brought into practical use: that is, the greater the area of the surface exposed to the action of the motive or first cause, whether it be wind water, steam or electricity, the greater the effect produced in the motive-power. In regard to the expense, the inventor makes this comparison: In extending the area of a steam engine to increase the power, the momentum being the same, the ratio of expense will increase in proportion. But electricity, being of a different nature, when the area of surface is extended, extra power is obtained, with a diminished ratio of expense. For instance: suppose it costs $1.25 per horse-power for the material to keep a 50-horse-power condensing marine steam engine at work for twenty-four hours, and the area of surface in the piston is extended sufficiently to produce 100-horse power the cost per horse-power for producing the additional 50 would be equal to that of the first 50. But suppose the cost is ten cents per horse-power for material to keep a fifty-horse marine electro-magnetic rotary engine at work for 24 hours, and the area of surface is extended to produce 100-horse-power, the additional 50-horse-power would be obtained at a quarter less cost than the first fifty; therefore, the whole expense would be greatly reduced. A marine electro-magnetic rotary engine, and all its accompaniments for a six months' cruise, would not occupy more space in a vessel than a marine steam engine of equal power, saving the room now required for furnaces, boilers, coal-bunkers, &c. A vessel that can be propelled by Electricity can be built with one-fourth less capacity—at less expense—with finer lines for speed—carry equal burden, and in every way possess superior qualities to one built for being propelled by steam. Again: a vessel propelled by electricity can be entirely closed up when required. This will make it available for arming in a peculiar manner either for assault or defense, and navigable submerged or on the surface of the water. This invention is destined to make great changes, not only in our river and ocean navigation, but also in railways of every description.

The inventor has constructed a working model of his machine, with plans of different descriptions, which he is preparing to exhibit to the government engineers at Washington. Col. Reeves may not be the "coming man" that is to revolutionize the mechanical world; but so sure as time continues, the principle upon which he is at work embraces a truth not a whit inferior, in importance, even to that which dawned upon Fulton when he caused his first steamboat to float upon the waters of Hudson river.

Ten Tons of Rails an Hour.—The Rail Mill attached to the Pennsylvania Iron works of Waterman and Beaver, at Danville, in this State, made on Friday, 18th December, 104 tons, 17 cwts. (2240 lbs. per ton) of rails in 10¾ hours on a single train of rolls. They were manufactured for the "Philadelphia and and Erie Railroad Co.," 56 lb per yard and 30 feet lengths. It may be of interest to ironmasters and railroad men to know that so much was accomplished in so short a space of time, more perhaps than has ever been done by any other Rolling Mill in the same number of hours.

The Oldest House in America is in St. Augustine, Florida. It was built by the Spaniards in 1510—over 350 years ago. A sketch of this ancient relic has lately been taken, from which a painting has been made, which was recently on exhibition in New York.

Patent Department.

Improvement in Generating Steam—*A California Invention.*—Mr. B. F. McKim of Virginia City, a machinist in the Gould & Curry mill, according to the *Union* has recently invented a new and improved mode of generating steam, which is well worthy the attention of mill owners. The object of the invention is to effect a saving in the use of fuel. The principle upon which it is based is to expose as much water surface to the fire as possible, and in this the inventor has succeeded admirably, and thinks that he can produce one hundred per cent. more steam, with an equal amount of fuel, than can be generated by any other method now in use. The water, after it is received cold from the force pump, passes through a process remarkably simple in its operation, which raises its temperature almost to steam heat before it enters the boilers at all. Then it is subjected to the same heat as cold water is in ordinary boilers, and the result is obvious. The patent will be received soon and preparations completed for putting up boilers upon this plan. In a region where firewood is costly, the advantages of such an invention are very great.

A New Crushing Battery.—The Virginia *Union* notices at length a new crushing mill recently invented by Mr. H. A. Gaston, of Washoe City, N. T., which consists of the application of the tilt-hammer to the stamps of the common battery. The stamps are raised by a succession of levers, and there are no cams to be broken, whatever may be the velocity with which the stamps are made to rise and fall. The inventor claims that by his battery four blows may be given to one by the ordinary constructed battery, with the same number of stamps. Such a result, if it can be made practicable, would surely be most important. The editor of the *Union*, who has seen and carefully examined a working model, appears to think the invention a useful one, and indulges the hope that it may soon be subjected to a practical test.

An Automatic Railroad Switch has been patented in France, which can be worked by adjusting rods, attached to the engine itself or any car or other vehicle placed in front of the engine.

New Hot Air Engine.—What is claimed to be an improvement on hot air engines has recently been invented by Henry Masser, of Roxbury, Mass.

A Useful Invention has been patented in New York, for obtaining an oil or grease from the tarry residuum produced in the manufacture of coal oil. A great commercial economy will doubtless thereby be effected.

An Improved Riding Saddle.—G. L. Webber, of New York city is the assignee from a German inventor, of an improved saddle which appears to possess decided advantages over any heretofore in use. The object of this invention is to produce a saddle by which the horse is not pressed when in motion, one which will readily accomodate itself to the changes in the shape of the horse's back, consequent upon the greater or smaller amount of labor or exertion to which the horse may be subjected at different times, and the seat of which will at all times be kept cool and comfortable by a current of air passing through between it and the back of the horse. The invention also relates to an improvement in the girth, whereby the same is made easy for the horse and cheap and durable in its construction.

Nail Machine.—An important improvement in the nail machine has been patented by Daniel Dodge of Rusville, N. Y. This invention relates more particularly to the manufacture of forged nails and particularly of horse-shoe nails. In the manufacture of such nails by machinery it is difficult to produce as thin or fine a point as is desirable by a hammering or drawing operation. The plan adopted in this invention is to cut the points, after having reduced the nail as much as desirable by hammering or drawing. The improvement consists in the employment, in a machine for making forged nails, of cutters so constructed and applied that they will serve the purpose of cutting the metal from the side of the nail to reduce the thickness and produce the desired form of the point.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a nature. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every caveat	10
On every application for a patent	15
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in prosecution of the article.

In addition to injunction the infringer is liable to be mulched in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable, either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not infrequently reversed.

We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Mining and Scientific Press.

W. B. EWER,.....SENIOR EDITOR.

C. W. M. SMITH. W. B. EWER. A. T. DEWEY.

DEWEY & CO., Publishers.

OFFICE in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms of Subscription:

One copy, per annum, in advance,.....$5 00
One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers. ☜

Terms in Advance.—Having adopted the cash system, ALL payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

AMERICAN AND FOREIGN PATENTS.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

FAVORABLE TO INVENTORS.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Will be Discontinued.—After this date subscriptions not paid for in advance will be discontinued. As soon as possible bills will be presented for all arrearages. Parties who receive a paper from the office of delivery cannot evade the LAW requiring payment for the same. We shall in future keep no continued accounts with subscribers, and the subscriptions of ALL friends and patrons will be treated alike.

San Francisco:
Saturday Morning, February 27, 1864.

A MINING SCHOOL FOR THE DAY.

We have understood that the suggestions in our last issue, with regard to the propriety of establishing in this city what may be denominated a Primary Mining School, the benefits of which may he made immediately available to the mining public, were quite favorably received, and considered eminently practicable by persons thoroughly competent to judge in such matters. A class, much upon the plan indicated, has already been formed and is now in successful operation, made up chiefly of the teachers of the public schools who are allowed the use of a room in the Powell street school building. This class meets every Monday and Tuesday evening, under the direction of Profesor Price, a gentleman eminently qualified, by experience in English mining schools, for the task he has undertaken. The class has a small collection of apparatus, merely sufficient to carry them through a course of instruction in assaying for lead, copper, gold and silver. The course we believe occupies some 24 evenings, in which time Mr. Price expects to he able to give his pupils a practical knowledge of the above subject. The success of this class thus far has been such as to encourage the formation of a second class, which will number about twenty students. The place and time of meetings has not yet been decided upon, but will probably be announced about the 1st of March.

Steps should immediately be taken, under State patronage, to procure a proper room and apparatus for the continuation of this movement, on a scale somewhat more extended, and embracing all the departments of science having a direct bearing upon mining. Vast amounts of labor and money are being blindly expended every month, throughout the State and adjacent Territory, in mining operations, much of which is entirely unproductive, and more so illy directed as to result in losses to the State of almost incalculable amounts.

Mining companies are quite too negligent in their selections of superintendents. Every superintendent of a mine should have a knowledge of the chemistry of the materials upon which he is operating, and the general principles of all the various operations in mining which he may be called upon to undertake in the performance of his duties. It is one of the most obvious duties of the State to provide a school where such information can be obtained. For much of it the miner has no place for instruction. The laboratory and lecture room are indispensable in furnishing proper persons to manage the intricate business of mining operations, on the scale in which they are now being carried on upon this coast. We are annually losing millions, by reason of our neglect in this particular.

Most of those at present engaged in mining operations are to a very great extent ignorant of how many ways a little scientific knowledge will benefit them, and how many useful hints a good practical lecturer could suggest in the course of a few lectures. Such a school as we desire to see established here, would require, say three or four evenings in each week, dividied between lectures on the chemistry and metallurgy of the metals now worked in California, and practice in the laboratory. A laboratory suitable for the practice of analysis and assay would be needed, the cost of which, properly fitted up for some twenty-five or thirty students, would be from $4,000 to $6,000, leaving each student to provide his own materials, and pay a certain charge to the instructor.

Alternate evenings might be devoted to practical and theoretical lectures on mining, by some competent person who would enter heart and soul into the subject and treat upon matters which would be of most immediate value to men about entering upon the regular business of mining, with the view of making themselves thoroughly acquainted therewith. In our next we propose to give a syllabus, such as would be appropriate for such a course, and some further remarks upon the importance of such a school.

MINING SHARE MARKET.

The Mining Share Market has manifested but little activity during the past week, save in speculative stocks. The heavy fluctuations which have recently occurred have been attended with many severe losses, and exerted an important and depressing influence over transactions generally. We note sales for the week to the amount of $989,494.25.

Ophir has been unusually quiet. We quote sales of 15½ feet, only, at from $1,610 @ 1,620; a decline of about $50.

Gould & Curry still remains inactive; we note sales of five feet at $4,700 @ 4,775; a decline from previous quotations.

Challar continues quiet; 200 shares have changed hands at from $250 @ 310, closing at the latter figure, a material improvement over the previous week.

Savage has found buyers—1 foot at $3,000 and 1 at 2,950.

Daney has formed quite an exciting feature of the week. Opening on Tuesday at $130, it reached $150 on Wednesday, $185, buyer 30, on Thursday, and closed, last evening at $220, cash. This rapid advance is due to late and important information from the mine, which is of an exceedingly encouraging nature. We have been favored with the perusal of a letter from the superintendent, which appears to fully warrant the important movement which has taken place in this stock.

Burnside has been in quite active demand for the past three days in consequence of important telegraphic advices from the mine. The effect has been to increase the extent of the transactions in this stock without any improvement in rates.

Lady Bryan has been in less in demand. We note sales of 1,583 shares at from $48, seller 30, @ 60 buyer 30. It closed with a weak market at $53 b 30. News from the mine, however, still continues encouraging.

North America has been in more demand, and generally at slightly improved rates. We note sales of 1,247 shares from $105, seller 30 @ 140 buyer 30, closing at the latter figure.

North Potosi has slightly improved in demand at about former figures. Sales of 346 shares at $54 @ 66 are noted.

Burning Moscow has not been in much demand. We note sales of 82 shares only, at $80 @ 90 b 30.

We quote sales of 222 shares of Lafayette, G. H., at $19 @ 22; 60 of Pride of the West at $82½ @ 87½; Melones, 10 at 42½; Baltic, 126 shares at $165 @ 178 b 30; Caledonia Tunnel 237 shares at $16 @ 29 b 30; La Blanca, 25 at $25½ and 5 at 27.

Nevada, Justice Ground, still continues to attract considerable attention. After suddenly advancing last week to $240, it subsequently declined to $187½, but opened the present week at $225, and still further advanced to $230 on Thursday last. This company has recently had a crushing of 100 tons of ore which yielded $87 to the ton.

Uncle Sam has sold for $600. Overman for $450. Central, No. 2, has found buyers at $825 and $850. Potosi at $1275, and Imperial at $167.50.

Harmon has still further improved, and has found buyers at $41, cash and 45 buyer 30 days.

We quote Baltimore American steady at $45@47. Buckeye, $14@16.50. Spanish, No. 2, at $20. Seneca, $16@17. Adriatic, $9. Independent, $10. Grosch, cons, $5. Blue Lead, $65. Blue Ledge, $9.50@10. Desert, $15. Crockett, $19. Smoky Valley, $35. Reservoir, $15. Gov. Nye, $5. Chas. Cany, $17. San Carlos, $15. Mary Ann, $50. Santa Rosa, $4, Mt. Davidson, $2. Nightingale, $25. North Ophir, $3. Paul Thompson, 4. Golden City, (unassessable,) $8.25. La Providencia, $2.

Napoleon, copper, may be quoted at $45. Bullion has been considerably inquired after at a material advance. We quote sales of 83 shares at $75@80 b, 30 days.

Lucerne has been much enquired for during the two past days, at an advance from $15 of last week to from $23@25 b, 30 days; closing at yesterday's board with the latter figure.

Real del Monte has still further declined, under the pressure of large quantities of stock forced upon the market in consequence of the existing excitement with regard to this mine. It has found sellers the past week as low as $46; 2116 shares have changed hands at from $46@90. We refer to remarks concerning this mine in another column.

Wide West has further succumbed to the pressure of the prevailing excitement and has found sellers at $20, closing however, at $24.

Antelope is held firmly at $200@207 and upwards. We quote Corbit at $13.50. Utah, $22.50 @27. Cora at $7. Silver Hill, at $12.

Eclipse R. R. is quoted at $9. Jefferson at $10. Ruby at $17. Metropolitan, Owens River, at 8. Victory at 4.50. East Lynn at $17. Scottish Chief, Humboldt, at $4. De Soto in demand at $40.

WASHOE STOCK MARKET.

Collated from the Regular Reports of the Virginia Daily Union to Latest Dates.

The share market in Washoe during the past week has been unusually active. A number of Boards are in operation, and great numbers of private sales are also made, which are not reported. Old established claims are held firmly, while newer locations are somewhat fluctuating. The attention of operators still continues to be chiefly directed toward American Flat, and the supposed south extension of the Comstock. An unusually large number of claims will he found reported in our record of sales.

NEVADA TERRITORY.

We gather from the Territorial papers the following names of mining companies which have recently filed papers of Incorporation in Nevada Territory:—

Norbury & Lybecker Consolidated G. & S. M. Co.—Gold Hill district; A. Haas, J. C. Ealberg, S. N. Hoonbrook, Theodore W. Thompson, William Norbury.

Mogul G. & S. M. Co.—Desert district; Leonard Yust, Hale Vesey, J. H. Morison.

Gold Hill G. & S. M. Co.—Desert district; Leonard Yust, O. W. Stone, H. M. Vesey.

Emblem G. & S. M. Co.—Palmyra district; Henry Van Horn, Henry Van Doren, L. W. Barber, G. Heckes, W. G. Lee.

Davis G. & S. M. Co.—Red Mountain District; S. H. Pefley, C. W. Ridgeway, S. Davis, B. F. Jackman, Charles Matheson.

Occidental Consolidated Mining Co.—Gold Hill district; William Arrington, H. B. Summers, J. L. Black.

Muy Rico G. & S. M. Co.—Gold Hill Mining district; L. E. Bulkley, J. W. Imeroux, John T. Miller.

Mermon G. & S. M. Co.—Gold Hill district; John Kneeland, A. K. Grlm, G. W. Gordon.

Young G. & S. M. Co.—Gold Hill district; A. W. Allict, J. L. Moore, L. Young, G. H. Mather, Fenno Downer.

I X L M. Co.—W. Smith, Jas. G. Rule, Chas. Gorin.

Last Jnmeson G. & S. M. Co.—W. R. Morris, N. A. Chandler and Marshon.

Antelope S. M. Co.—Virginia district; S. Heyman, R. P. Smith, J. W. Phillips, R. C. Chappel, W. H. Bremer.

Utica M. Co.—Flowery district; S. H. Bennett, G. W. Creeley, A. H. Manning, C. C. Warner, J. S. McReynolds.

The Great Western Coal Company.—El Dorado Canon; Walter B. Harrub, Charles Goll, M. J. Henley.

Key Stone G. & S. M. Co.—Big Creek district; Chas. A. Webster Jas. D. McDowell, Robt. McClarley.

Rough & Ready M. Co.—Amador district; Isaac A. Hoose, Urial Gates, B. B. Troxel.

Ohio G. & S. M. Co.—Reese River district; Wm. Rogers, Julius Siehel, Thos. Lose.

Ben Franklin G. & S. M. Co.—Amador district; O. C. Redd, S. E. Gaskill, P. Canavan.

Rough & Ready No. 2, G. & S. M. Co.—Amador district; Bob Hawxhurst, L. M. Duncan, George Bouney.

North American G. & S. M. Co.—Gold Hill district; Samuel Hyatt, F. G. Heuston, and H. P. Wells.

Harold M. Co.—Gold Hill district; George D. Roberts, M. Byrne, Jr., A. A. Welch, M. Broyhill and John R. Harold.

Rock Point G. & S. M. Co.—Palmyra District, County of Lyon; M. W. Irwin, J. C Black and A. P. Atkins.

Plymouth Rock G. & S. M. Co.—Gold Hill district; Charles F. Duval, Joseph Nelson, Thomas Fitch, Thomas Hannah and Theodore A. Hale.

The Great Western Coal Co.—El Dorado Canon; Walter B. Harrub, C Doll and M J Henley.

Telegraph G. & S. M. Co.—Palmyra district, N. T.; C. W. Walton, John Snodgrass, E. C. Shaw, D. E. Jones and L. Solomon.

Amazon C. & S. M. Co.—Black Prince Ledges Nos. 1, 2 and 3, Indian Springs district, Lyon county, N. T.; Jas. S. White, Samuel Chapman and J. S. Crosman.

Eureka G. & S. M. Co.—Palmyra district, N. T.; J. S. Crosman, J. M. Sanders, R. R. Warder, J. H. Thompson and A. Brimhall.

Mining Advertising Edition.

We shall hereafter issue our advertising edition on Wednesday, thus giving Mining Notices the benefit of a semi-weekly insertion. A large number of copies will be gratuitously circulated in San Francisco and the interior towns, and Nevada Territory. All advertisements and reading matter for the advertising edition will also appear regularly in the Saturday's issue of the Press.

Rates of Advertising, for Mining Companies, $2.50 per square for one month. Notices of sales published five times for $2.50 per square.

DEWEY & CO.,
Publishers Mining & Scientific Press, 56, 57, 59, Government Building, San Francisco.

J. M. Wolf is our Agent for Virginia City, Gold Hill and neighboring districts.

Before Cutting the Leaves of this journal, stitch each No. through the back, or fasten with a large pin, and you will have a paper in the most convenient form possible for reading or reference.

MACHINISTS' TOOLS.

Nothing perhaps is more wonderful in the progress of invention than the efforts which have been made by machinists in devising and constructing the *tools* by which they are enabled to work out such wonders with wood and iron, as we now see everywhere about us. The common things of tho present day would have been almost or quite impossible an hundred, or even fifty, years ago. Take, for instance, the engine which propels tho magnificent steamer Constitution. Would the mammoth cylinder of that steamship ever have been conceived if the finish of its interior surface had been required to be performed by "chipping" and "filing," as were the engine cylinders in use fifty and seventy-five years ago? We think not. Take a first-class, highly-finished locomotive of to-day, and conceive the difficulties which would have attended its construction a hundred years ago, as only those can who, in their 'preatice days, were familiar with the tediousness in performing, by haud labor, those operatious in fabricating its moviug parts, which are aow so quick'y aad perfectly accomplished by the plauiag, shaping and slatting machines, which have mainly come iato use withiu the recollection of the present generation. Would the coastructioa of such a piece of machiaery have been uadertakea an huudred years ago, except as the result of the slow toil of almost a lifetime. The great cost of such work would have rendered its practicability out of question.

We think it is uot claiming too much to hold that the great advance in mechanical operations, generally, which forms such an important feature of the present day, is due almost exclusively to the preliminary introductioa of *tools*, by which labor has beea vastly ecouomized, and its results brought to its present almost perfect mathematical accuracy. It was only by the employment of tools which performed their work with the greatest attainable degree of accuracy, that Col. Colt was eaabled to turn out such an efficieat fire-arm, aud at so low a price as to place it within the reach of every one. No process of haad finish, however skillful aad elaborate, could turn out muskets of a quality now almost indispensable, by means of which any oae part of any musket may be made to fit exactly in its place, in every other of a thousand in aumber; so that on a battle-field, or under any other circumstaaces, unless two muskets are injured in precisely the same place, one perfect weapon may always be made in a moment out of two crippled ones. It is impossible for hand power, however skilful it may be, even to arrive at the exactuess aad precision of machiaery.

It is with pleasure that in our frequent visits to the various machine shops throughout this city, we observe the coastaat additioas that are being made to our general stock of machinists' tools of the latest aad most approved patterns. Our principal shops, at the present time, appear to be eagaged in a generous rivalry to the eud that aeither shall out-do the other in this directioa. We hope to see this spirit of energy aud enterprise continue, until San Fraacisco shall stand as much the acknowledged head of all other places, in this particular, as she already does in the coaceded advaatages of her geographical position for reachiag the highest point of commercial supremacy among the cities of the earth.

Office of the Belle Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. San Francisco, Feb. 23, 1864.—Notice is hereby given that at a meeting of the Board of Trustees of the above Company, held this day, an assessment (No. 2) of fifty cents per share has been levied on each and every share of the capital stock, payable immediately, in gold coin, to the Secretary at his office. J. S. LUTY, Sec'y, 305 Montgomery. 9v8-4t.

Maryland Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. Office 305 Montgomery street, San Francisco, Feb. 25, 1864.—Notice is hereby given that at a meeting of the Board of Trustees of the above named company, held this day, an assessment of fifty cents per share has been levied on each and every share of the capital stock, payable immediately to the Secretary, at his office. By order of the Board of Trustees' 9v8-4t. J. S. LUTY, Sec'y.

Mr. Jarvis Jewett is our duly authorized advertising agent and collector in this city.

Professor Whitney's Address.

Professor Whitney delivered an address, regarding the State Geological Survey, in the Assembly Chamber at Sacramento, on Wednesday evening of last week. The *Bee* reports the attendance not very large. Perhaps there might have been upon the floor one-third of the members of the Legislature, and ladies and gentlemen not connected with the law making department enough to fill half the seats. The gallery was well filled. The meeting was called to order, and Mr. Yule of the Senate was chosen Chairman. He introduced Professor Whitney, State Geologist, who at once commenced delivering his address, reading from manuscript. He said this was the third time he had appeared before the Legislature to give an account of his doings, and he thanked them for what they had done for the development of the geology of the State, and hoped they would continue their favors to the work. When at the East, after he had decided to come to this State, he met a returned miner, who with many expletives, which savored more of strength than righteousness, informed him that before he got through with that job he would find himself in many a tight place. He supposed at the time that the hardy miner aforesaid referred to grizzlies, who would manifest an affection for his scalp, and embrace him to death, or something of that description, but the principal tightness he had found was in the Legislature, in regard to the disbursements from the State Treasury for geological purposes. He had arrived at the conclusion that the survey would be very popular if it cost nothing. Newspapers of large size had published doleful articles upon the expense of the State survey, and pointing out that the State Geologist was running the impoverished State into debt, but he never saw that they advised the abandonment of the Coast Survey, though Uncle Abraham was settling his accounts with the rebellious States on the metallic basis of lead and iron and required all his means. Had there been a time fixed for the survey to end, the survey corps could make some calculations, but with a sword suspended by a single hair over their heads, they had to be prepared to quit at any time. It was like requiring the architect of the Capitol to be ready to cease his labors on that building at any day, and place the roof and dome upon the foundation walls, and yet have the structure fit for use. It would certainly not be his fault if the building presented somewhat of a squat appearance. The speaker then proceeded to speak of the divisions of his work, and also of the geography and topography of the country, of which the people of the State were profoundly ignorant. Previously to the survey the citizens were not aware that there were higher mountains than Diablo visible from San Francisco. But little was known of the Sierras, especially that portion between Yosemite and Walker's Pass. Here was an area as large as the State of Massachusetts almost entirely unknown. The maps which had been in use were very incorrect. The corps had completed several maps of different portions of the State by actual survey, and several more were under way. The map of San Francisco Bay would be good for one hundred years. In the course of their researches the corps had ascended three points on the Sierras as high as 13,000 feet above the level of the sea, and for three weeks did not descend lower than 8,000 feet. It was hard climbing, rock shinning and bush ranging. They had co-operated with Major Williamson of the United States Survey, in taking observations to ascertain concerning the variations of the barometer on the Pacific coast. They had specimens of animals and reptiles disentombed from rocks, and they had ascertained that the coal range extended quite through the State from San Diego to Siskiyou. The only counties not visited by some of the corps since the survey commenced were Klamath, Humboldt and Mendocino. The corps had been expected to prospect the State and they had done so, and were continuing to do so. They went upon certain rules and they could give general results. They were assisted by 10,000 men who did not draw their pay from the State Treasury, but who impoverished the State far more by their waste. By their mode of prospecting it would take some 3,500 years to prospect the whole State, which is three times as large as New York, and twenty-four times as large as Massachusetts. He noticed one instance of waste where the corps told the manager of a certain mine that he was not saving all the gold. The manager was confident that he was. A scientific investigation showed that he was losing at least two-thirds of the precious metal. A few hints given were acted upon, and if this system was generally adopted there would be enough saved in the State in a year to pay the entire yearly expense of the survey two or three times over. They had sent specimens of every description to eminent men and to the museums of the East and Europe. The speaker gave his ideas concerning a museum, and pointed out the financial means of erecting a building suitable for this purpose and for a laboratory and a practical school of science. In his opinion the State University Fund should be used for this building. There were several objections to using the new State Capitol for a museum. It would not be completed in time and there would not be room enough in it to spare. The specimens in the museum would not be well cared for. He had been told that specimens of quartz containing $2,500 in gold had been sent to one of the past Secretaries of State. They were put in the cellar of the present Capitol, and what was not pocketed was thrown into the streets of Sacramento for Macadamizing purposes. If rare mineral, botanical and animal specimens were well cared for and kept where the entire people could see them, they would pour in from all parts of the State. It had been proposed to divide the University Fund between the three existing Universities in the State, but there was the Constitutional objection that they were all of a sectarian character. Professor Whitney read extracts from the memorial of the Trustees of the College of California, at Oakland, to the Legislature, asking for the entire fund. He proceeded to "waltz" into that institution, which he haudled without gloves. Their memorial, to give it the very gentlest name, was a "pious evasion." Some people might call it by a much harsher title. It represented the geological school as in full operation, when one of the professors named was in the Colorado mines and another in Washoe. The constitution of the institution provided that not only a majority of the trustees, but a majority of the professors must be members of an evangelical Christian church, and that this must be the case for all time. This shuts out from those positions Catholics, Unitarians, Universalists, and other liberal Christians. Not a professor of old Harvard, if the whole corps of those learned men should offer their services gratis, could be allowed to fill one of those professorships. Judging from the list, the college was an asylum for decayed clergymen—as every professor had a "Rev." before his name. Professor Whitney thought when the survey was commenced that $30,000 per year should be appropriated for fifteen years, which would make $450,000. The survey of Pennsylvania cost $500,000. The least he thought should be appropriated was $20,000 per year. If that amount was granted, he would try and keep the corps together. If the Legislature did not see fit to do it he should never regret the three years he had spent, however hazardous and laborious was his work in that time.

Washoe Stock Exchange Building.—The Virginia *Union* says that work on the new hall of the Washoe Stock and Exchange Board is progressing rapidly, and it is intended to have it completed by the first of March. It will be much larger and more comfortable than the old room, having a circular dome of colored glass in the ceiling, which will be finished in fine style. The cost of putting this new place of meeting in order will not be less than one thousand dollars.

California Wool.—An extensive auction sale of wool occurred in Boston on the 17th ult. The prices obtained were: For California 21@27; California lamb, 27; California fleece, lamb, 20@35; California superior pulled, 45; California superior pulled, No. 1, 37.

STOCK EXCHANGE.

The unparalleled development of the Mineral Resources of the Pacific Slope, and the daily increasing commerce of the city of San Francisco, have rendered a

PUBLIC EXCHANGE,

Conducted on the same fair business principles that characterize similar institutions in Europe and America, an urgent necessity in this city.

The public are therefore informed that a suitable building has been erected, at 612 and 614 Montgomery St., in which will be held Daily Sessions for the sale of Stocks, Bonds, Securities, Specie, etc., under the following Board of Directors, and subject to the following Rules and Regulations:

Board of Directors.

GEORGE W. DART, President.

WALTER SPARROW,	E. H. WILSON,
JOSEPH CLOUGH,	R. O. STURTANT,
HENRY WILLIAMS,	D. J. OULLAHAN,
E. PAVALLIER,	EDWARD FLANAGAN,
THOMAS WALLACE,	J. DE STA. MARINA,
M. G. ELMORE,	E. W. LINSLEY.

Rules and Regulations.

1. The business of the Exchange shall be managed by a Board of thirteen Directors, to be elected annually, and to whom application for membership shall be made. Any question or issue raised touching contracts, made at the Board, their validity or meaning, shall be referred to a committee of five, for investigation and final decision.
2. The Sessions of the Board shall be from 12 to 1 P. M., and from 3 to 4 P. M., each day, Sundays excepted.
3. Only members of the Exchange shall offer Stocks, etc., for sale.
4. The public may bid upon and purchase any Stocks, Bonds, Securities, Specie, etc., that may be offered for sale.
5. Buyers of Stock who are not members must either make a deposit of Ten (10) per cent. of the purchase money at the time of sale, or have their contracts endorsed by a member.
6. Should any member or party refuse to fulfill a contract entered into by him at a Session of the Board, he shall thereafter be debarred from all privileges of the Exchange, at least until he shall have specially performed such contract.

Commissions on Sales

Of United States, State, County and City Bonds; Railroad, Steamboat, Telegraph, Gas, and Water Stocks; Certificates, Bills of Exchange, Treasury Notes, Specie, etc., one-half of one per cent.

G. T. FOUQUE, Superintendent.

S. C. BRADSHAW, Jr., Secretary.

Office, 511 Sacramento street, San Francisco. 3-tf

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Stock Reports.

SAN FRANCISCO STOCK BOARDS.

Sales by the San Francisco Stock and Exchange Board, the Stock Exchange, and the Pacific Board of Brokers.

[Revised for the Mining and Scientific Press.]

Saturday, February 20, 1864.

An Ingenious Piece of Mechanism, in the clock line, has been on exhibition during the past week in the shop window of A. Dubois, Jeweller, on Montgomery street, in this city. It is quite a novelty, and has attracted considerable attention. It is the invention of Mr. Otto Weidero. The clock is in the form of an ordinary mantle timepiece. Its peculiarity consists in the manner in which the motion is communicated to the works of the clock. Instead of the ordinary pendulum, a beam of polished brass is suspended, by its center, over the clock and works, with an oscillating motion, similar to a steam engine. It is connected on the one side of the center, to the spring which imparts motion to the machinery, while the connection from the opposite side is with the clock movements. The construction of time pieces, by this arrangement, is more simple than that by the pendulum—two wheels being dispensed with. Mr. W. has already made applications for a patent.

The Press in Washoe.—Over two hundred subscribers, in Virginia City and Gold Hill, have added their names to our subscription list during the past two weeks.

An unusually severe Earthquake was experienced in this city on Friday morning.

The Law for Publishing Legal Mining Notices.

An utterly erroneous opinion having been engendered in the minds of some (through misrepresentations and interested motives of others), that the laws of this State technically require the publication of mining notices to be be made in a DAILY paper, we take occasion to quote the following positive passage concerning the publication of mining notices, from the latest statutes passed by our Legislature on the subject, March 5th, 1861, which has not since been altered or amended:—

"Notice of each such call, or assessment, shall be given to the respective stockholders personally, or shall be published once a week for at least four weeks in some newspaper published at the point designated as the principal place of business of the corporation, and also in some newspaper published nearest to the point where said mining operations are being carried on. If, after such notice has been given, any stockholder shall make default in the payment of such call, or assessment, as to the shares of stock held by him, so many of such shares may be sold as will be necessary for the payment of the call, or assessment, on the shares held by him. The sale of said shares shall be made as prescribed in the by-laws of the company; *provided*, that no sale shall be made except at public auction to the highest bidder, after a published notice of thirty days, PUBLISHED AS ABOVE DIRECTED; and that at such sale the person who will agree to pay the call, or assessment, so due, together with the expense of advertisement and the other expenses of the sale for the smallest number of whole shares, shall be deemed the highest bidder."—[Passed March 5th, 1861—Statt. 1861, p. 14.

The above is indeed plain, and we hold ourselves responsible for the assertion that a weekly issue of a mining notice is as valid as that of a daily. By publication in the MINING AND SCIENTIFIC PRESS, a wide circulation is given to notices, particularly among miners and shareholders in this city and throughout the State and Nevada Territory. A weekly publication is also secured at a material saving in cost to shareholders.

Give the Name of the District.

We are requested to call the attention of Secretaries of Mining Companies to the importance of inserting in their advertisements, of whatever character, the name of the district or locality. Considerable trouble arises from this neglect, as there are Companies bearing the same name, although situated in different localities. Attention to this matter will not only be a benefit to others interested in Mining Companies, but also to the Secretaries themselves.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

To the Stockholders of the Real del Monte Consolidated Gold and Silver Mining Company.

The undersigned, who were appointed a Committee at the meeting of the stockholders on Friday night, have met and determined upon the following measures for the present:

1st. The appointment of a first class book-keeper to examine the books and accounts of the corporation, and report upon its condition.

2d. The appointment of two gentlemen of ability, one a superior mineralogist, and the other a skillful mining engineer, to proceed together and visit the mine, and ascertain and report accurately upon its condition and prospects.

In order to carry out the objects of the stockholders upon the plan adopted by the Committee, a fund will be required of about twenty-five hundred dollars, which will be a tax of about one dollar per share upon the number of shares represented at the meeting of stockholders. Mr. James J. Robbins has consented to act as Treasurer, and the stockholders are requested to pay their contributions of one dollar per share at his office, No. 609 Clay street.

Unless this is promptly attended to, the important inquiry placed in our hands will fall to the ground.

We have also determined to warn the public against buying or dealing in any of the promisory notes or other evidences of indebtedness issued by apparent authority of the Corporation, as we are advised that the debt created is illegal, and the notes will consequently be void in the hands of any person, however innocent of their origin.

JAMES J. ROBBINS,
WM. BUCKLEY,
ALEXR. WARFIELD,
S. HEYDENFELDT.

9v8-tf

Picayune Gold, Silver and Copper Mining Company, Bear Gulch, Calaveras Co.—At a meeting of the Board of Trustees of the above Company, on the 17th day of February, 1864, an assessment of six cents per share on each and every share of the Capital stock of the said Company was levied, payable on or before the 22d, day of March, 1864. And Notice is also hereby given that the first annual meeting of the Stockholders of the said Company will be held on Tuesday the 22d day of March 1864, at the office of the Company at Copperopolis, for the purpose of electing officers for the ensuing year, for the adoption of By-laws, and for the transaction of such other business as may come to its notice. All Stockholders are respectfully requested to attend.

By order of the Board of Trustees,

L. HONIGSBERGER, Sec'y.

Copperopolis, Feb. 17th, '64. 9v8-4t

Imperatrice Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. Office 305 Montgomery street, San Francisco, Feb. 24, 1864.—Notice is hereby given that at a meeting of the Board of Trustees, held this day, an assessment (No 2) of fifty cents per share was levied on each and every share of the Imperatrice Silver Mining Company, payable immediately, in gold coin, to the Secretary, at the Company's office. By order of the Board of Trustees. (9v8-4t.) J. S. LUTY, Soc'y.

Santa Maria Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. Office 305, Montgomery street, San Francisco, Feb. 23, 1864.—Notice is hereby given that at a meeting of the Board of Trustees, held this day, an assessment (No. 2) of fifty cents per share was levied on each and every share of the capital stock of the above company, payable immediately, in gold coin, to the Secretary, at his office. By order of the Board of Trustees. (9v8-4t.) J. S. LUTY, Sec'y.

Information is Wanted at this Office, of the place of business of the following named Companies:—

Circulo Cordo Mining Company; H. Alder, President.
Bold Rover, Gold and Silver Mining Company.

Secretaries of Mining Companies, Attention!

SAVE TIME AND LABOR!

Crocker's

STOCK & ASSESSMENT LEDGER

IS THE SIMPLEST, MOST ECONOMICAL AND USEFUL WORK EVER PUBLISHED.

Price, $10. Copyright Secured.

☞ Read the following testimonials to its excellence: ☜

We, the undersigned, hereby certify that we have used CROCKER'S STOCK AND ASSESSMENT LEDGER, and find it one of the most useful books ever published for the purpose designed. It is a great saving of labor, and by it Secretaries can keep the accounts of Mining Corporations in a neat and compact manner, and avoid many errors that inexperienced persons might make in stock and assessment accounts. We cheerfully recommend it to the Secretaries of Mining Corporations as a great improvement on the old system.

D. W. PARKHURST, Secretary of 11 Companies, Aurora.
J. R. McFARLAN, Secretary Pyramid Company, Sierra county.
J. G. LIBBEY, Secretary Companies, Virginia, N. T.
WM. BREMMER, Secretary of three Companies, Virginia, N. T.
C. C. WARNER, Secretary Lassell Company, Virginia, N. T.
JOSEPH PETTIGREW, Secretary six Companies, Aurora.
JAMES SWEENEY, Secretary Kough & Ready Co.; Mich. Bluff.
F. A. HORNBLOWER, Secretary Mountain Quartz Company.
CEO. J. NEWMAN, Secretary four Companies, Monitor.
R. F. BARTON, Secretary two Companies, Virginia, N. T.
WM. E. HALE, Secretary eleven Companies, Gold Hill, N. T.
R. G. TERRY, Secretary three Companies Saeramento.
JULIUS JACOBS, Secretary two Companies, San Francisco.
C. M. ROALS, Secretary Bonesteel Company, Woodbridge.
HENRY HOEBER, Secretary two Companies, Woodbridge.
CHAS. GREIVES, Secretary Tule Co., Woodbridge.
DANIEL KELLY, Secretary Hutchens Co., Woodbridge.
E. C. LOTHROP, Secretary two companies, Marysville.
CHAS. M. GORHAM, Secretary Washington Company Marysville.
A. R. MESERVE, Secretary Garden Company, Viola.
AUG. WEIHE, Secretary nine Companies, Stockton.
ORLANDO JENNINGS, Secretary three Companies, Austin, N. T.
A. T. ARROWSMITH, Secretary Hank's Ravine Co., Folsom.
S. M. SEELY, Secretary three Companies, Folsom.
J. R. CLAYES, Sec. Hank's Ravine Company, (No. 2) Folsom.
ED. BURROWS, Secretary German Ridge Company, Murphys.
JAS. STOBIE, Secretary Murphys Company, Murphys.

It is the BOOK OF BOOKS for Mining Companies. In fact I pronounce it without equal.

W. A. TWILL, Sec'y Wild Rose Co., Spenceville.

Having examined your "Stock and Assessment Ledger," I take pleasure in recommending it to all Secretaries of Mining Corporations. J. HEACOCK, Sec'y Well Copper Co., Spenceville.

It is one of the most concise, appropriate and desirable books for Mining Corporations ever published.

GEO. C. BURNETT, Sec'y sixteen Co's, Gold Hill, N. T.

The Ledger can be adapted to Companies DECLARING DIVIDENDS, with a very slight change, and such will be got up for those who desire them. Copies of the work sent by mail, postage paid, on receipt of $10.

SEND FOR SPECIMEN SHEETS.

The Book is bound in Three Styles: Half Morocco, muslin sides, $16; Full bound, sheep, $14; Full bound, Russian bands, $17 50.

Published and for sale, wholesale and retail, by
H. S. CROCKER & CO., Book and Job Printers, Saeramento.

Secretaries' MINING DIRECTORY.

The Publishers of the MINING AND SCIENTIFIC PRESS will soon issue a new Edition of the MINING DIRECTORY, containing the names, as far as possible, of all Mining Companies, the location of their lodes, Secretaries' names and the Offices of such as have their principal place of business in San Francisco.

☞ Secretaries of newly incorporated companies, or others who have not their names on our old list, will please hand in a written statement of the names of their companies, location of claims, place of business, etc., immediately.

DEWEY & CO., Publishers and Patent Solicitors, 56 & 57 Government House, Corner of Sansome & Washington streets, San Francisco. 9v8-tf

"CHIPPINGS."

The citizens of Grass Valley, Nevada county, are erecting a new building for assemblies and theatrical purposes. It is to cost $25,000. When completed it will form the most costly and best theatrical structure in the mountains.

The tooth of a harrow, in a field near Detroit, caused a bright mark; the fortunate driver stopped, looked, and found a piece of copper weighing 357 pounds, and nearly pure.

Ice has been taken from a lake near Washoe City this winter two feet thick. A thousand tons of it have been put up for the supply of Virginia City next summer.

West Point is full again. It now contains 560 cadets, under the instruction of 25 commissioned officers.

The church property in San Francisco is set down as follows: The valuation of the Protestant churches at $282,415; the Roman Catholic churches at $380,000; the Jewish at $35,000.

Not a single steamer under the American flag now sails between the United States and Europe. There are about fifty under foreign flags. English "neutrality" has done its perfect work.

A sand fort of great strength is believed to have been erected within the ruins of Sumter.

A marine fire department is suggested in New York, to sink in the stream any vessel that may be in danger of conflagration.

The costume of the Spanish ladies has not changed for two hundred years.

The masts of a new French ironclad, lately launched near Tuolon, are of a single piece each. The timber was obtained from California.

"Courage" is the name of a mining company whose office is at Marysville. It is a good name for such a company. That and money is about all they need.

Mayor Gunther, of New York city, says in his message that Central Park has cost the city, up to January 1st, 1864, $7,372,426, but it has increased the taxable valuation of three wards adjoining $27,000,000 from 1856 to 1863.

It was recently stated in the House of Representatives that the Post Office Department is now self-sustaining, for the first time in fifteen years.

Italy don't allow her army officers to get married. Twelve hundred of them have transgressed, and are to be court-martialed.

"What is Eternity?"—The following beautiful answer by a pupil at the deaf and dumb school at Paris is a conception scarcely to be equaled: "The lifetime of the Almighty!"

The light of my torch is none the less for lighting my neighbors' torch by it.

There is no truth in the statement that the wife of Stephen A. Douglas is engaged as a clerk in the Treasury Department. Mrs. Douglas is living with her mother, in Washington, in close retirement.

The accumulation of guns in the Springfield (Mass.) arsenal, now amounts to 133,000. The total is increased daily by about 900 pieces.

A Sorgo Sugar Convention was reeently held at Columbus, Ohio, at which the opinion prevailed that sorgo culture would soon rank among the important interests of the country; that its permanency will not depend upon the question of peace or war with the South, but that the growth of sorgo would soon prove a most active competitor for supremacy with the northern cane.

Germans of this State are organizing to assist the Schleswig-Holsteiners; Polanders are organizing to assist Polaud; Irishmen are organizing to assist Ireland; Italians have organized to assist Italy; and Southerners organize to assist the South.

A dispatch has been received from Mr. Couuess saying that the bill relating to United States Courts in California has passed both houses of Congress. It reorganizes the Courts here.

A charter election takes place at Virginia City on Monday, March 7th. Two tickets are in the field, and lively times are expected.

A miner was killed by a "cave" in the Sugar Loaf drift diggings, near Rough and Ready, on Friday of last week.

Greathouse, the liberated pirate, has gone to the north part of the State, where he formerly resided.

Remarkable Collision.—The large English steamship Scotia recently ran into a stone pier, on the English coast, completely destroying the pier, while the vessel escaped without injury!

A. S. HALLIDIE & CO.,
WIRE ROPE MANUFACTURERS.
Established 1857.
Office, No. 412 Clay street—Works, North Beach,
SAN FRANCISCO.

After seven years' use throughout the State of California and the Pacific Coast generally, we can confidently recommend Wire Rope for
HOISTING FROM DEEP MINES,
GUY ROPES FOR DERRICKS, &c.,
STANDING RIGGING FOR SHIPS,
FERRY ROPES FOR FERRIES,
SASH CORD FOR WINDOW SASHES,
ETC., ETC., ETC., ETC., ETC., ETC., ETC.
It being Cheaper, Stronger, Lighter and More Durable than any other kind of Rope, and not stretching or shrinking by atmospheric changes.

MINING COMPANIES, by using it for Hoisting Purposes, save 66 per cent. on their outlay for other ropes.

Wire Fencing Strand,
For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired.
Pamphlets containing weight, strength and price, forwarded free application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS
We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

WHEELER'S
Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

***These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.
no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

To Druggists and all Prescribing for Neuralgic and Nervous Cases—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System. If you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

Formed by the Deposit of Water in Steam Boilers.

Used in all Boilers at the London Exhibition in 1862, By order of Her Majesty's Commission.

G. VENARD,

No. 627 Front Street, San Francisco,

SOLE AGENT FOR CALIFORNIA AND THE PACIFIC COAST.

This Compound has undergone the examination of the most competent Chemists in France and England, and has been pronounced all over Europe the BEST ARTICLE ever found for removing Scales in Steam Boilers, this great evil of industry.

The main qualities of this Compound are: that it removes the scales of any boiler in a few days, no matter how old, and it does not injure the metal in the least. The raising of steam is made easier. It saves fuel and work, and prevents all dangers of explosion.

The Compound has now been in use for three years, and the great success obtained in the Old World induced the undersigned to introduce it in this State, being confident of the patronage of this enlightened and industrious country. G. VENARD,

No. 627 Front street, San Francisco.

F. Rica, at Carson City, Nevnda Territory. By order of the Board of Trustees.

February 4th, 1864. [7v8-4t] JNO. F. POPE, Sec'y.

Emmett Copper Mining Company, Office No. 645 Clay Street, San Francisco, February 6th, 1864.—Notice is hereby given to the Stockholders of the Emmett Copper Mining Company that an assessment, No. 3, of 25 cents per share was this day levied on each and every share of the Capital Stock of said Company, payable Immediately in United States Gold Coin, to the Secretary, or to L. Hoh IGSBERGER, Copperopolis.

7v8-4t M. G. ELMORE, Sec'y.

Cœsus Gold and Silver Mining Company, Turnback District, Tuolumne county, Cal.—At a meeting of the Board of Trustees of the Cœsus Gold and Silver Mining Company, held the 4th day of February, A.D. 1864, an assessment of ten cents per share on each and every share of the capital stock of said Company, was duly levied, payable immediately, in U. S gold coin, to the Secretary, at the office of the Company, south-east corner Howard and Second streets, San Francisco. By order of the Board of Trustees.

San Francisco, Feb. 5, 1864. [6v8-5t] J. F. HARRIS, Sec'y.

Bay State Gold and Silver Mining Company, Turnback District, Tuolumne county, Cal.—Notice is hereby given, that the annual meeting of the stock-holders of the Bay State Gold and Silver Mining Company, for the election of officers for the ensuing year, will be held on the first Monday in March, at the office of the Company, south-east corner Second and Howard streets, San Francisco. By order of the Board of Trustees.

San Francisco, Feb. 5, 1864. [6v8-5t] J. F. HARRIS, Sec'y.

Crockett Copper Mining Company, Copperopolis, Cal.—Notice is hereby given, that at a meeting of the Trustees of the Crockett Copper Mining Company, held January 2d, 1864, an assessment of one ($1) dollar upon each and every share of the capital Stock of the Company was levied, payable immediately, in gold coin, to the undersigned, or to J. M. Pike, at Copperopolis; being assessment No. 2. On the 1st inst. the Trustees als o levied another assessment, being No. 3, of one ($1) dollar per share upon each and every share of the capital stock of the Crockett Copper Mining Co., payable the same as assessment No. 2. Persons having interests in the Company are requested to come forward, prove title, and receive their certificates of stock. ISAAC HECHT, Sec'y,

No. 417 and 419 Sacramento street.

San Francisco, February 5th, 1864. 6v8-5t

Office of the Montezuma Gold and Silver Mining Company, No. 62 Government House, corner of Washington and Sansome streets, San Francisco. Feb. 5th, 1864.—Notice is hereby given, that a sufficient number of shares of the capital stock of the Montezuma Gold and Silver Mining Company, standing in the nnme of the following person, will be sold at public auction, at the sales room of Jerome Rice & Co., No. 327 Montgomery street, on WEDNESDAY, March 9th, 1864, at 11 o'clock A. M., to pay an assessment of 12½ cents per share, levied April 27th, 1863, together with expenses of advertising and sale, unless said assessment is previously paid with accruing charges—viz: Hugh McCormick; 247 shares; amount due; $30.87½. By order of the Board of Trustees.

6v8-5t O. A. CRANE, Secretary.

Triunfo Gold and Silver Mining Company.—At a Meeting of the Trustees of the Triunfo Gold & Silver Mining Co. held January 23d 1864, an assessment of One ($1) dollar per share was levied on each and every share of the assessable stock of the Company, payable immediately to the Secretary, at the Office of the Company, No. 1 Government House, in United States Gold Coin.

5v8-5t HENRY S. BROOKS, Sec'y.

Black Swan Gold and Silver Mining Company, Reese River District, Lander county, N. T.—Notice is hereby given, that the regular annual meeting of the stockholders of the Black Swan Gold and Silver Mining Company will be held on the first day of March next, at 4 o'clock P. M., at the Company's office, No. 305 Montgomery street, San Francisco. By order of the Trustees. J. S. LUTY, Secretary.

San Francisco, Jan. 27, 1864. 5v8-5t

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides, and the evidence of any error upon our part will be received in friendship, and treated with respect.

MINING AND SCIENTIFIC PRESS.

List of Contents for January.

No. 1 of Volume VIII.—January 2, 1864.—Masteden Thigh Bone—illustrated; Mining Review for 1863; Practical Education; Legislative Aid; Taxing the Mines; Gold Mines of New Zealand; Mining and Metallurgical Journals; A Trip to the Mines-Mariposa county; Silver Mountain District; The Lady Brynn Mine; Miscellaneous Items; Knight's Ferry—by our Traveling Correspondent; Hints to Prospectors; Letter from Lower California; Stock Remarks; Summary of Mining News—Gleaned from Various Sources; The Mining Interest; Mining Associations; Keystone Concentrating Works; Report of Stock Sales for the Week—Prices Bid and Asked; List of New Incorporations; Recent Patents; California Inventions; Mining Companies, Assayers', Stock Dealers', Machinists', Foundrymen's, and other advertisements.

No. 2—Jan. 9.—Hunter's Grain Separator—a new Invention, Illustrated; "A little Learning" not "A Dangerous Thing;" Grimes House—Copper Mines, by Our Traveling Correspondent; Reese River Correspondence; Summary of Mining News—California, Washoe, Humboldt, Reese and Owen's River Items; Annual Report of the Gould & Curry Mining Company; Owen's River Letters; Copper Mining in Canada; Short Paragraphs; Industrial Facts; Annual Treasury Shipments; Encourage Home Industry; Beginning of the New Year; Home vs. Distant Mines; California Copper Smelting Works; California Academy of Natural Sciences; Mining Share Market; Our Enlargement; Record of Mining Incorporations; Patent Department; The State Library; About Marvelously Rich Mines; Copper, Its Price and Demand; Editorial Items; Stock Reports; etc.

No. 3—Jan. 16.—A Patent Stone-Breaker—with Illustrations; Extraordinary Mental Developments; Reese River Letters—Smoky Valley, White, Mucus Sanitary Remarks; Hints to Prospectors; Mining Summary—Placer county, Sierra, Yuba, Reese River, Humboldt, Washoe, Esmernida, Lower California and Colorado Items; Statistical Articles; New Patents; Lost Arts; Editorial Paragraphs; Mining Share Market; Ophir Co. vs Burning Moscow; Our Harbor Defences; New Incorporations; Stock Reports; Branch Mint Report; Petroleum as Fuel; Varieties; New Mining Notices and Industrial Advertisements.

No. 4—Jan. 23.—Indian Bar Copper Mines—Illustration of the Washington Mine; Correspondence—Chinese Camp and Jamestown; Reese River Letters; Summary of Mining News; Washoe Mining Stocks; A Durable Ink; The Metal Market; Roll of New Incorporations; The Opinions of Our Neighbors; Miscellaneous Information—Mechanical and Industrial Facts; Patent Department; A Mining School for California; The Mechanics' Institute and Fair; From Lower California; Magnificent Specimens; The Beauty of the Season; Silver Bricks; Mining Share Market; A Mining Advertiser, Editorial Paragraphs; Important Success; Mining Laws—a good suggestion; Stock Reports; Total Stock and Mining Transactions for the week; Chippings; New Mining Notices, etc.

No. 5—Jan. 30.—Rock Drilling Machine—with Illustrations; Human Fossils in California; Mechanism—Ancient and Modern; Coal Oil—"A Warranty that is Safe to Bet On;" Correspondence—Sonora, Tuolumne county; A Trip to the Mines—Mariposa county; Letter from Arizona; Mining Gossip—Edited by Frank Warddell; Letter from Humboldt; Importance to the California Miner of a Knowledge of Mineralogy; The Miners' Laboratory, containing a valuable article on Assaying Copper Ores; A Reese River Mansion; The "New Chemical Agent in Warfare; Copper Coating Boiler and other Iron Plates; Navigation of the Colorado; Mining Incorporations; Short Editorials; San Francisco Stock Sales; San Francisco Mining Share Market; Washoe Stock and Exchange Board; Mining Incorporations of 1863; etc.

The Mining and Scientific Press contains 16 pages in each No., and 417 in each volume; two volumes a year. Terms, in advance, 1 year $5; 6 mos. $3; 5 copies, 1 year, $20. For sale by all newsdealers. Liberal commisions allowed all who act as agents.

DEWEY & CO., Publishers.

Cor. Washington and Sansome streets, San Francisco.

Two Good Canvassing Agents can find profitable employment by calling at this office. None but active and competent men need apply.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the Mining and Scientific Press. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

Correspondence from competent writers is respectfully solicited upon all topics of interest to the general readers of the Press. Persons possessing a knowledge of new discoveries, curiosities, important improvements or developments, who have not the time or experience to write their observations elaborately, can send us the substance in a few words, and we will care for the rest. The real name of the author must be received, which will be kept confidential.

We have received No 1 of the enlarged Mining and Scientific Press—published by Dewey & Co., San Francisco. It is greatly improved, and gives promise of an excellent, able and reliable journal.—*Marysville Daily Appeal.*

Mr. A. T. Dewey, a journalist of experience, has become associated with Messrs. Ewer and Smith in the proprietorship and conduct of this paper. It inaugurated the new year by doubling its size and other improvements, and is now a first class journal for miners and mechanics, as well as for the general reader.—*Sacramento Daily Bee*

This journal comes to us this week with a new head and enlarged to the full size of the *Scientific American* published in New York—sixteen pages. Those who take an interest in mining, industry and art, should not fail to read the prospectus of the Press, which may be found in our advertising columns, and those who may desire to see copies, intending to subscribe, will have specimens sent free on application by letter to the office of publication.—*Mountain Messenger, La Porte.*

We have received the first number of the eighth volume of this interesting paper. It is now under the control of friend Dewey, and has been enlarged to sixteen pages. We commend it to miners, stock dealers, and others taking an interest in the development of the mineral lands of this State. It can be had for $5 a year, and if preserved will make two volumes of interesting matter, containing 416 pages each.—*Red Bluff Independent*

We find its pages filled with mining news and articles of interest to miners and scientific men. Persons interested in mines in this State, Nevada Territory, Arizona or Mexico, should certainly subscribe for the Press.—*Napa Reporter.*

It has been enlarged from eight to sixteen pages, and promises to be a valuable publication.—*Sierra Democrat.*

Is is full of the most valuable reading matter. Those at all interested in mining affairs should subscribe for it at once.—*Alameda Gazette.*

It is devoted to news, art, science and progress, and should receive a liberal support.—*Solano Press,*

The Mining and Scientific Press comes to us enlarged to double its old dimensions, and otherwise improved. The Press is the only journal on this coast devoted exclusively to mining and scientific matters, and should be read by miners everywhere. It is published weekly, at $5 per year.—*Oroville Union.*

CAUTION.

Notice is hereby given that the following mentioned Certificates of the stock of the Prima Denna Gold & Silver Mining Company were, on the 5th day of February 1864, sold at public Auction, according to Law, for non-payment of assessments due thereon, and will not be transfered on the books of the Company, viz:

Brown's Bronchial Troches for Coughs and Colds.— A neglected Cough, Cold, an Irritated or Sore Throat if allowed to progress, results in serious Pulmonary Bronchial and Asthmatic Diseases oftentimes incurable. Brown's Bronchial Troches reach *directly* the affected parts, and give almost immediate relief. For Bronchitis, Asthma, Catarrh, and Consumptive Coughs the Troches are useful. Public Speakers and Singers should have the Troches to clear and strengthen the Voice. Military Officers and Soldiers who overtax the voice, and are exposed to sudden changes should use them. Obtain only the *genuine.* "Brown's Bronchial Troches" having proved their efficacy by a test of many years, are highly recommended and prescribed by Physicians and Surgeons in the Army, and have received testimonials from many eminent men. Sold by all Druggists and dealers in Medicine in the United States and most Foreign countries at 25 cts. per box.

Agents for California, Redington & Co., San Francisco. 5-1m

Back Numbers.—We have a limited number of past volumes of the Press on hand, which will be sold, neatly bound, at reasonable rates. A portion of the back numbers of the paper can be had by the single copy.

Mining and Scientific Press.

A Mining Journal--Devoted to News, Art, Science and Progress.

VOLUME VIII. SAN FRANCISCO, SATURDAY, MARCH 5, 1864. NUMBER 10.

Contents:

No. 10—March 5.—Communication—"Pocket Veins;" Hints to Prospectors; Sierra District, Humboldt county—Description of a Representative Mine; Slang of the Stock Exchange; On the Loss of Gold Attending the Process of Amalgamation; Product of Petroleum; Wide West Mining Company; The Term Reese River; Mining Gossip; Washoe Stock Market; Mining News and Items; Our Mechanical Interests; Unwise Recommendation; Coal Creek Coal Company; Patent Department—McCauley's Steam Condenser, M. D. Garrard's Amalgamator, A California Invention, Etc.; A Mining School for San Francisco; A Formation of Black Oxide with a Supposed Decomposition of Nitre; The Drought and Gold Crop; San Diego Copper; Decidedly Arbitrary; Mining Share Market; New Incorporations; The Northern Gold Fields; Stock Market Reports; "Chippings;" Etc.

Communications.

[Written for the Mining and Scientific Press.]

POCKET VEINS.

Mr. Editor.—There have been so many conflicting opinions entertained by the public in relation to the character of the mines of Esmeralda District, and I have been so often asked for my opinion of them, that I have concluded to give it (for what it is worth) through your excellent "Press."

The system of veins in the Esmeralda District is so unlike any other on this coast that it has been quite a puzzle to the most expert miners and engineers of this country, and many eminent scientific men have been equally at fault when attempting to give the true character of the veins of this singular District.

The first conclusion arrived at by many experts, whose opinions were respectfully listened to by the public, was that the veins were mere surface formations, and that most of the mineral wealth of the District was contained in the boulders that covered the hills in abundance, asserting in fact there was little there *but boulders*.

But it was soon proven that these wiseacres were wide of the mark; for the miners began to dig into the veins and find rich ores—richer in many instances than any boulders found on the surface.

The public then begnn to have confidence in the mines—First one and then another would invest, until soon all caution was laid aside, and recklessness beeame the *rule*, instead of the exception to the mining enterprises of the District.

Gold, silver and copper is deposited in veins in a great variety of forms, and in combination with a great variety of mineral substances. These minerals are also found to have accumulated, in some parts of veins, in greater abundance than in other portions. Such accumulations of ore are sometimes called pockets, chimneys, and chambers. As those terms are often indiscriminately and improperly used, I will attempt to explain the difference between the different classes of veins.

When the metal or mineral occurs in small branches, here and there, through the mass of the vein, it is called a pocket vein; first, because there is only a "pocket full" of the rich ore, and second, because the rich branches of ore are in most cases deposited in cavities of various shapes and sizes, in the gangue rock. In such cases the value of the vein will depend upon the number and richness of the pockets. The fact of finding rich pockets near the surface is strong *presumtive evidence* that pockets of like character may be found at greater depth, showing that a *line of pockets* may be expected to occur in the "*line of projection*" of the vein. Pocket veins generally have ore in small quantities distributed through the mass of the vein; when veins of this character contain ore enough, independent of the pockets, to pay current expenses, they may be considered safe mines to work. But if the pockets are small, and no ore is mixed with the mass of the vein, it will not do to risk much money or labor upon them.

CHAMBER MINES.

When the ore occurs in large masses, taking up the entire space between the walls of the vein, and continuing in depth and length sufficient to leave a large space when the ore is removed, it is called a "chamber mine." Such a chamber has been worked out in the Wide West claim, on Last Chance Hill, and another of like character is now being worked by the "Real Del Monte" Co., on the same hill. The peculiarity of chamber mines consists in the fact that the ore is accumulated in large masses, with radiating or branching veins from the chamber, as a center, all of which will contain more or less ore of like character with that in the chamber. It is rarely the case however that the spurs, or radinting veins from a chamber, are as rich as the chamber itself. And as they are followed out into the surrounding rock they gradually diminish in thickness until they become mere threads, and are lost.

Chambers of this character are as various in depth, as they are in length and width; they sometimes continue to great depths and are then called "chimneys." Such mines are common in the greenstone and porphyry formations of Mexico, and are sometimes of vast extent and richness. Those conversant with some of the best mining districts of Mexico, will be at once struck with the similarity of the geological formation of the Esmeralda Mining District, to those Districts in Mexico, where chamber mines most frequently occur.

The public have fallen into another error in regard to the mines in the Esmeralda Mining District They seem to think that when the chamber is exhausted, that the mine is then worthless, and must be abandoned. This is a very great error, for the fact that one chamber is formed in a vein, is very strong evidence that there are other chambers of like character in the course of the vein; and I should expect to find them at intervals more or less frequent so long as the vein could be followed in the depth—where they lie between the walls, like a strand of beads burried in the earth; and if the miner is skillful, he will follow the thread, and pull them off one by one, until the depth becomes too great for him to penetrate.

I will here observe that the rich sections of veins, *always stand endwise to the surface*. And the rule is as uniform almost, in that respect, as that observable in the vegetable kingdom. The trees stand up in the direction of their growth; *so do the dikes and veins of ore*. If it be a pocket vein, then you may expect to find a *chain of pockets* in its line of *projection* or growth. If it is a chamber mine, then you may reasonably expect to find a succession of chambers. by the same rule. If the ore occurs in a section of a vein, and is regularly distributed through the rich section, then you may be sure that the rich section will be found to stand endwise to the surface, and will always be found to continue as a section of the vein only—No matter to what depth you may follow it.

The observations above made are applicable only in geological structures of uniform character. It is a well known fact that veins change their character as they pass from one formation into another. They not only change their mineral character from quartz to spar, or from spar to quartz, as it passes from one class of "bed rock" to another, but they also change their ores, in part or in whole, where the changes in the surrounding rocks become clearly defined. These changes are as likely to occur in a *vertical* line, as in a *horizontal* and, if the vein, in its vertical line penetrates through more than one formation.

From these facts I draw the conclusion that the Wide West and Del Monte people should not be discouraged to the point of abandonment, merely because the first chamber in their veins has been worked out; for they may expect to find a succession of chambers in the vertical line of their veins, until they penetrate into a different geological structure, which I think is not likely to occur in Esmeralda Dist. We have an illustration of the truth of my theory in the opening of the Antelope vein on Silver Hill, which is about half a mile south-west from the Wide West claim. Here too they struck into a large chamber of rich ore near the surface. The company wisely concluded to sink a shaft to a greater depth, to see how far the rich ore extended. They soon cut through the chamber into barren rock, and continued to the depth of one hundred feet or more before they struck the west chamber of rich ore.

This case alone should satisfy the public that the theory claimed is true, for even in Esmeralda District we have an illustration of it that cannot be doubted.

Many of my friends will remember that from the first discovery of the District, I predicted that the best mines in Esmeralda belonged to that class called "chamber mines," and that if they were not careful they would get their fingers burnt with them; not because they were not valuable, but because they would either *over* or *under* estimate their value.

The Wide West and Del Monte claims were both, at one time, largely over rated. They are now both rated much below their true value. And why? *Because a system of favoritism has kept ignorant men employed, where skill and experience was most needed, in properly opening the mines and determining their character.*

The folly of such management has been fully illustrated in the management of the mines above referred to, as some of our best citizens have occasion to know; and the same system of reckless folly is continually being repeated in every part of the Pacific States and Territories.

Will our people never learn wisdom in mining business, as well as in other branches of productive labor? I answer yes; when our mining engineers learn their business *practically*, as well as *theoretically*; when they are able to tell in what *class* of rock the vein will contain the most metal, and at what depth the enclosing rocks may be expected to change to a barren formation, and whether the ore will occur in pockets, chambers, chimneys, or in sections of more regularity; and when they learn how to estimate for machinery, in proportion to the amount of the ore the mine will yield, and will make their reports upon the facts examined, without regard to the *opinions* or *wishes* of others. Then, and not till then, can our capitalists invest their money in mining operations, with anything like safety, or with an expectation—even of getting fair returns for the investment made. Many will point to the magnificent returns from the great Comstock vein, with its tier of rich paying claims, and seem to expect each new discovery should prove another Comstock. But such expectations are to be realized, in but few instances. What other mine on this coast could stand the enormous expenditures of capital that has been lavished upon those at Virginia City? Have these mines paid dividends *because* of such expenditures? I think not. *They have paid dividends in spite of the lavish and reckless expenditure of money* in machinery and other improvements. The Comstock and Gold Hill mines are the exceptions, not the rule by which other mines are to be judged. The reputation, alone, of the Comstock

vein, has ruined, financially, thousands, and will ruin more before the public will recognize the difference between the rule and the exception, in mining enterprises.

There are thousands of veins in the country that will pay handsome returns upon the proper amount of capital and labor being expended upon them. But if the proper bounds are not regarded, ruin must be the inevitable result. This is as certain as the fact that no vessel can carry more freight than its tonage measurement, without the risk of going to the bottom.

I have written this article for the purpose of pointing out a road of safety for those who are capable of measuring the future by the experiences of the present and past history of mining.

J. E. Clayton, M. E.

[Written for the Mining and Scientific Press.]

HINTS TO PROSPECTORS.

BY J. H. CHURCHILL, A. M.

(CONTINUED FROM PAGE ONE HUNDRED AND THIRTEEN.)

V. Prospecting must be undertaken, more or less, as scientific experimenting—a definite question must be put to mother earth, at every opening made into her bowels, and a definite answer obtained from every rap of the pick. It is not only, "Shall I find mineral?" It should be much more exact—"Shall I find gold, silver or other ores?" according to the indications from the surface and bedrock in its geological order. Sinking further, "Shall I find the minerals from which the croppings were decomposed?"—e.gr., pyrites where carbonate of copper has been abundant. "Shall I find it rich?" where at the croppings a cross-course has run into the lead. "How shall I find the dip?"—"how shall I find the direction of the heave of my lead?" in case of a fault. "How shall I identify my bed of coal?" where the dip and strike and casing are the only guide. Answers to such questions must be insisted upon. If such questions are systematically put with proper judgment, work to determine them will not be abandoned before the object to be sought is known to be there or not. Vast labor has been thrown away in idle guessing.

VI. It remains to show how to learn the value of your ore. Exact Sampling is the essential preliminary to Exact Assaying. For the first, any method of mixing materials of different sizes, which admits of rolling of the large particles over the smaller, will be fallacious. Sieves or rakes are necessary to sort the sizes; but they cannot do this completely. Rolling must be provided against by laying out the material, after sifting into different coarsenesses, in layers on a level smooth surface, of a thickness say twice that of the mesh of the sieve last used, then divided into portions, and then cleaned up. The exactness of the work must then be verified by determining whether the specific gravity of the different portions is the same in that equal measures are of the same weight. This is to be done readily by weighing equal-sized boxes or measures one against the other. This mode of sampling should leave no doubt, and is simple in practice. One error must be guarded against. As nearly perfect as this system of sampling is, through one operation, it secures no similarity between equal measures of ore of the same weight obtained at different samplings. The ore which does not pass through each sieve should be sampled, after sifting, and the sample reduced in size till it will pass through the sieve, and then mixed and resampled with the smaller ore.

[THE END OF SERIES I.]

Erratum.—In the Table, page 35, for "South Wales" read North Wales.

Burning, Roasting and Smelting Ores.—J. D. Whelply, of Boston, Mass., has patented a process and arrangement for roasting and smelting ores. In the process of roasting, water is made to perform a conspicuous part. The description, in the Official Patent office Report is merely technical, with reference by letters to drawings, etc., which cannot be understood in the absence of the drawings referred to. If the invention is valuable anywhere, it must be especially so on the Pacific coast. We should be pleased to hear from the inventor.

[Written for the Mining and Scientific Press.]

Sierra District—Humboldt County, N. T.

We have been furnished with a recent communication to the Tallulah Mining Company, written by Hon. James A. Banks, Superintendent of the mine, which is situated near the town of Dunglen, in the mineral district of Sierra, Humboldt county, N. T., and which was briefly alluded to in the columns of this paper some weeks ago. The well-known ability and integrity of Mr. Banks, warrants us in asking for the portions of this communication, which we subjoin, the careful attention of our readers. The Tallulah is a representative mine, and is owned principally by wealthy merchants and lawyers in San Francisco, who will not part with their interests and care very little for the fluctuations of the market. This mine has been opened to a great depth, and the value of the facts and opinions stated by Mr. Banks, after the most exhaustive and careful investigation, lies principally in their vindication of the importance of Sierra District and of the permanence of its mines. We append extracts as follows:

Dunglen, January 26th, 1864.
